western Europe has the power to dazzle even the most jaded observers Emerging from the narrow underground passages into the chambers of caves such as Lascaux Chauvet and Altamira visitors are confronted with symbols patterns and depictions of bison woolly mammoths ibexes and other animals Since its discovery cave art has provoked great curiosity about why it appeared when and where it did how it was made and what it meant to the communities that created it David Lewis Williams proposes that the explanation for this lies in the evolution of the human mind Cro Magnons unlike the Neanderthals possessed a more advanced neurological makeup that enabled them to experience shamanistic trances and vivid mental imagery It became important for people to fix or paint these images on cave walls which they perceived as the membrane between their world and the spirit world from which the visions came Over time new social distinctions developed as individuals exploited their hallucinations for personal advancement and the first truly modern society emerged Illuminating glimpses into the ancient mind are skillfully interwoven here with the still evolving story of modern day cave discoveries and research The Mind in the Cave is a superb piece of detective work casting light on the darkest mysteries of our earliest ancestors while strengthening our wonder at their aesthetic achievements Theology, Evolution and the Mind Neil Spurway, 2009-05-05 In pre scientific thought mind itself and its religious perceptions particularly were considered gifts from God injected into a previously created world of matter By contrast all the contributors to this book accept an evolutionary account of life mind and its religious dispositions However they hold more divergent views on the relation of mind to body and brain on the validity of those religious dispositions and on how far even Christ and his predicted Second Coming may be seen as aspectc of the evolutionary process The seventeen contributions are rewritten and extended versions of papers first delivered at the annual conference of the UK s Science and Religion Forum held at Canterbury Christ Church College in Sept 2007 Though most speakers were British representatives from The Netherlands Jordan Zimbabwe and USA also contributed Invited individual chapters consider the general pattern of evolutionary thought arguing that it can make a major contribution to the maturation of theology archeological evidence for the emergence of religion and the proposal that it was an inevitable phase in human evolution the contribution of religious concepts to the development of our species and the question whether that provides any ground for accepting them as true the unresolved debate whether mind is a separate entity from brain or a consequence of its activity and the melding of paleo anthropology with theology to provide an integrated account of humanity and its culmination in Christ Each of these papers is the subject of an individual expert response and they are all drawn together in an overview essay which concludes the first part of the book The second shorter part contains a selection from the papers contributed by registrants for the meeting Their topics are whether mathematics consists of truths discovered or thought forms developed by human minds ecological awareness as an evolutionary development the neurobiology of freewill and sin an evolutionary perspective on holistic medicine and the impressive fruitfulness of juxtaposing neurophysiological and biblical concepts of the human body mind **The Penultimate Curiosity**

Roger Wagner, Andrew Briggs, 2016-02-25 When young children first begin to ask why they embark on a journey with no final destination The need to make sense of the world as a whole is an ultimate curiosity that lies at the root of all human religions It has in many cultures shaped and motivated a more down to earth scientific interest in the physical world which could therefore be described as penultimate curiosity These two manifestations of curiosity have a history of connection that goes back deep into the human past Tracing that history all the way from cave painting to quantum physics this book a collaboration between a painter and a physical scientist that uses illustrations throughout the narrative sets out to explain the nature of the long entanglement between religion and science the ultimate and the penultimate curiosity **Mind and Body in Early China** Edward Slingerland, 2019 Mind and Body in Early China critiques Orientalist accounts of early China as a radical holistic other which saw no qualitative difference between mind and body Drawing on knowledge and techniques from the sciences and digital humanities Edward Slingerland demonstrates that seeing a difference between mind and body is a psychological universal and that human sociality would be fundamentally impossible without it This book has implications for anyone interested in comparative religion early China cultural studies digital humanities or science humanities integration [The Mating Mind](#) Geoffrey Miller, 2011-12-21 At once a pioneering study of evolution and an accessible and lively reading experience a book that offers the most convincing and radical explanation for how and why the human mind evolved Consciousness morality creativity language and art these are the traits that make us human Scientists have traditionally explained these qualities as merely a side effect of surplus brain size but Miller argues that they were sexual attractors not side effects He bases his argument on Darwin's theory of sexual selection which until now has played second fiddle to Darwin's theory of natural selection and draws on ideas and research from a wide range of fields including psychology economics history and pop culture Witty powerfully argued and continually thought provoking The Mating Mind is a landmark in our understanding of our own species *The Ingenuity Gap* Thomas Homer-Dixon, 2010-01-29 Human beings have been smart enough to turn nature to their ends generate vast wealth for themselves and double their average life span But are they smart enough to solve the problems of the 21st century Thomas Homer Dixon In The Ingenuity Gap Thomas Homer Dixon global guru the Toronto Star asks is our world becoming too complex too fast paced to manage The challenges facing us converge intertwine and remain largely beyond our ken Most of suspect the experts don't really know what's going on that as a species we've released forces that are neither managed nor manageable We are fast approaching a time when we may no longer be able to control a world that increasingly exceeds our grasp This is the ingenuity gap the term coined by Thomas Homer Dixon the critical gap between our need for practical innovative ideas to solve complex problems and our actual supply of those ideas Through gripping narrative stories and incidents that exemplify his arguments he takes us on a world tour that begins with a heartstopping description of the tragic crash of United Airlines Flight 232 from Denver to Chicago and includes Las Vegas in its desert a wilderness beach in British Columbia and his solitary search for a little girl

in Patna India He shows how in our complex world while poor countries are particularly vulnerable to ingenuity gaps our own rich countries are not immune and we are caught between a requirement for ingenuity and an increasingly uncertain supply When the gap widens political disintegration and violent upheaval can result reaching into our own economies and daily lives in subtle ways In compelling lucid prose he makes real the problems we face and suggests how we might overcome them

Christian,2004-02-23 An introduction to a new way of looking at history from a perspective that stretches from the beginning of time to the present day Maps of Time is world history on an unprecedented scale Beginning with the Big Bang David Christian views the interaction of the natural world with the more recent arrivals in flora and fauna including human beings Cosmology geology archeology and population and environmental studies all figure in David Christian s account which is an ambitious overview of the emerging field of Big History Maps of Time opens with the origins of the universe the stars and the galaxies the sun and the solar system including the earth and conducts readers through the evolution of the planet before human habitation It surveys the development of human society from the Paleolithic era through the transition to agriculture the emergence of cities and states and the birth of the modern industrial period right up to intimations of possible futures Sweeping in scope finely focused in its minute detail this riveting account of the known world from the inception of space time to the prospects of global warming lays the groundwork for world history and Big History true as never before to its name **The Myth of the Closed Mind** Ray Scott Percival,2011-12-15 It s like talking to a brick wall and We ll have to

agree to disagree are popular sayings referring to the frustrating experience of discussing issues with people who seem to be beyond the reach of argument It s often claimed that some people fundamentalists or fanatics are indeed sealed off from rational criticism And every month new pop psychology books appear describing the dumb ways ordinary people make decisions as revealed by psychological experiments The conclusion is that all or most people are fundamentally irrational Ray Scott Percival sets out to demolish the whole notion of the closed mind and of human irrationality There is a difference between making mistakes and being irrational Though humans are prone to mistakes they remain rational In fact making mistakes is a sign of rationality a totally non rational entity could not make a mistake Rationality does not mean absence of error it means the possibility of correcting error in the light of criticism In this sense all human beliefs are rational they are all vulnerable to being abandoned when shown to be faulty Percival agrees that people cling stubbornly to their beliefs but he maintains that not being too ready to abandon one s beliefs is rational **The Inner Voice in Gadamer's Hermeneutics**

Andrew Fuyarchuk,2017-07-15 The inner word in Gadamer s hermeneutics refers to the meaning that exceeds anything explicitly said This explanation has been subsumed within metaphysical and theological parameters of interpretation with

little regard for the implication of Gadamer's turn to the living language for understanding the inner word. Through examining his phenomenology of the inner word, *The Inner Voice* in Gadamer's *Hermeneutics* reveals its musical, rhythmic and tonal dimensions and how they function to harmonize disparate orientations in the middle voice above all for Gadamer those that underlie modes of cognition in both the humanities and the sciences: a visual and auditory ethos. However understood as constituting the music of language discernible in the middle voice, the inner word is also suppressed or forgotten by the technological extension of sight that is print and thus requires a turn of the inner ear or auditory disposition. Andrew Fuyarchuk assesses theories of language in evolutionary and cognitive science in light of Gadamer's insights into the nature of thought and he employs them to account for a dimension of language that is inscribed in the lingual minds of our species. When recalled by the inner ear, this dimension enables us to think such opposites together as we find in the humanities and sciences together. This thinking together is expressed in a double account of an object of inquiry such as the one Fuyarchuk puts forward about the inner word in Gadamer's philosophical hermeneutics.

**The Evolution of Rationality** F. LeRon Shults, 2006-11-09. How can science and religion move together toward a collegial future? J. Wentzel van Huyssteen has spent decades developing an interdisciplinary platform for the fruitful engagement of science and religion. Compiled to celebrate van Huyssteen's 65th birthday, *The Evolution of Rationality* gathers a stellar roster of scholars in van Huyssteen's main areas of philosophy, science and theology. The contributors, some of them Gifford lecturers and Templeton Prize winners, offer significant new methodological and material proposals giving evidence of van Huyssteen's impact on the shape and texture of interdisciplinary conversation itself. Their essays are arranged in three parts: modern and postmodern philosophical challenges to our understanding of rationality; scientific evolutionary perspectives on the nature and development of human rationality in relation to religion; religious and theological explorations of the evolution of rationality. However, because the authors are all involved in interdisciplinary dialogue, this philosophical/scientific/theological arrangement of chapters is not hard and fast. Virtually every essay engages issues that overlap all three fields, forming an extremely rich blend of thought. A creative interdisciplinary collection written by world-renowned philosophers, scientists and theologians, *The Evolution of Rationality* renders fitting tribute to pioneering scholar-mentor J. Wentzel van Huyssteen.
