User-Friendly Math for Parents Catheryne Draper, 2017-06-08 User-Friendly Numbers in Math for Parents shares stories of students reasoning thinking and sometimes misunderstandings about numbers stories that provide the opportunity to see math differently Most of the students are visual spatial creative daydreamers who may miss the details in math a characteristic of visual spatial learners Through these stories parents will see mathematics through their child's eyes both the clarity and the confusion Armed with this new sight and therefore insight parents will be able to talk differently with their child about the number language of math By seeing numbers through new eyes children and parents can take control of the math language and therefore the mathematics This book focuses more on the why reasons behind math number relationships explained in plain English and with images that show number relationships By including more images and fewer formulas readers especially the visual spatial learners have a better chance of understanding how number organizers apply to different number types Recognizing connections among number formats significantly reduces the impatience frustration and heartache around homework

Spatial Sense Makes Math Sense Catheryne Draper, 2017-12-08 *Spatial Sense Makes Math Sense* How Parents Can Help Their Children Learn Both brings the strengths of both algebra arithmetic and geometry into focus by showing how spatial relationships can make both make more sense Parents will learn how to further develop and improve their child's spatial sense using visual spatial strategies of classifying drawing diagrams big idea concept building visualizing and more As Sawyer encourages Even if the pictures are not good the effort of making them will leave lasting traces in the mind and can cause the work to be remembered Whether you had a preference for geometry and endured algebra loved algebra and never understood geometry or were one of those people who never recognized a purpose for any of the math topics or in truth in any mathematics this book will show parents how developing spatial sense can help visually explain both algebra and geometry relationships You will read about Sophie Germain who believed that algebra and geometry worked hand in hand because as she described them algebra is written geometry and geometry is figured algebra

How the Math Gets Done Catheryne Draper, 2017-10-20 *How the Math Gets Done* Why Parents Don't Need to Worry About New vs Old Math provides a roadmap to understanding what the symbols for math operations add subtract multiply and divide really mean what the clues are to interpret these symbols and a kind of short story of how they evolved over time to decipher the enigmatic squiggles of those verbs called operations *How the Math Gets Done* Why Parents Don't Need to Worry About New vs Old Math compares the old and the new methods for math procedures from a Big Idea perspective by organizing the information in four sections Definition Organization Relationships and Patterns and Connections Each section contains three chapters that clarify the issues related to each Big Idea section The Conclusion offers parents even more hints and guidelines to help their child

through this math country of procedures for calculating in math **The Math Gene** Keith Devlin,2001-05-17 If people are endowed with a number instinct similar to the language instinct as recent research suggests then why can't everyone do math In *The Math Gene* mathematician and popular writer Keith Devlin attacks both sides of this question Devlin offers a breathtakingly new theory of language development that describes how language evolved in two stages and how its main purpose was not communication Devlin goes on to show that the ability to think mathematically arose out of the same symbol manipulating ability that was so crucial to the very first emergence of true language Why then can't we do math as well as we speak The answer says Devlin is that we can and do we just don't recognize when we're using mathematical reasoning

Math is Precise, Period, vs. Math is Precise, Strings Attached William J. Adams,2010-01-18 This book is the outcome of my conclusion that current mathematics education taken in total is a disaster and that by sharing my experience and thoughts about teaching mathematics I might be helpful to colleagues students and others who are concerned about mathematics education to mitigate this state of affairs Mathematics education disaster in what sense No it's not in the sense that I believe insufficient attention is being given to number fundamentals It has to do with the almost unanimously held erroneous view about the nature precision and infallibility of mathematics that we acquire from the current state of mathematics education Current mathematics education does not prepare us for life in the 21st century which requires an understanding of the mathematical modeling perspective of what mathematics can do and its limitations and an appreciation of the questions that should be considered to help us distinguish numbers that inform from those that deceive If the wizards of Wall Street had a 21st century mathematics education there is a good chance that they would not have put unquestioning faith in their value at risk math models and the financial meltdown of 2008-09 would have been avoided or at least softened If the nation's decision makers and the public at large were better educated about what questions to give thought to when numbers continually hurled at them are the basis for decision making they would be less vulnerable to accepting faulty numbers and all of us would be less at risk to the consequences of bad decision making *Learning to Teach Number* Len Frobisher,1999 Organised into 21 independent modules covering number concepts and systems the four number operations and pre algebra the book provides models for pupils learning as well as seeking to develop the reader's own understanding of the subject Back cover **Mathematically Speaking** C.C. Gaither,Alma E Cavazos-Gaither,1998-01-01 For the first time a book has brought together in one easily accessible form the best expressed thoughts that are especially illuminating and pertinent to the discipline of mathematics *Mathematically Speaking A Dictionary of Quotations* provides profound wise and witty quotes from the most famous to the unknown You may not find all the quoted jewels that exist but you will definitely a great many of them here The extensive author and subject indexes provide you with the perfect tools for locating quotations for practical use or pleasure and you will soon enjoy discovering what others have said on topics ranging from addition to zero This book will be a handy reference for the mathematician or scientific reader and the wider public interested in who

has said what on mathematics *Modern Mathematics* Dirk De Bock,2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

Out of the Mouths of Mathematicians: A Quotation Book for Philomaths Rosemary Schmalz,2020-08-03 Moritz s Memorabilia Mathematica inspired this work but this one differs in that sources are limited to mathematicians of the 20th century Useful to researchers to facilitate a literature search to writers who want to emphasize or substantiate a point and to teachers students and other readers who will have their appetite for the subject whetted by the 83 quotes Book News Inc

Second Handbook of Research on Mathematics Teaching and Learning Frank K. Lester,2007-02-01 The audience remains much the same as for the 1992 Handbook namely mathematics education researchers and other scholars conducting work in mathematics education This group includes college and university faculty graduate students investigators in research and development centers and staff members at federal state and local agencies that conduct and use research within the discipline of mathematics The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work The Handbook should also be a useful textbook for graduate research seminars In addition to the audience mentioned above the present Handbook contains chapters that should be relevant to four other groups teacher educators curriculum developers state and national policy makers and test developers and others involved with assessment Taken as a whole the chapters reflects the mathematics education research

community's willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community
