Presidency Science Advising Volume 5:

The Presidency and Science Advising Kenneth W. Thompson, 1986 With this fifth volume in the series on the presidency and science advising the Miller Center continues its inquiry into a crucial and neglected topic in presidential studies All the contributors to this volume dwell on the opportunities as well as the problems of science advising Science advising is seen as more difficult to organize and implement than economic or national security advising although the several authorities offer different explanations Contributors to this volume include D Allen Bromley Jack Ruina Richard Garwin Edward Teller and Harvey Brooks Co published with the Miller Center of Public Affairs *Presidential Science Advisors* Roger Pielke, Roberta A. Klein, 2010-06-16 For the past 50 years a select group of scientists has provided advice to the US President mostly out of the public eye on issues ranging from the deployment of weapons to the launching of rockets to the moon to the use of stem cells to cure disease The role of the presidential science adviser came under increasing scrutiny during the administration of George W Bush which was highly criticized by many for its use and some say misuse of science This edited volume includes for the first time the reflections of the presidential science advisers from Donald Hornig who served under Lyndon B Johnson to John Marburger the previous science advisor on their roles within both government and the scientific community It provides an intimate glimpse into the inner workings of the White House as well as the political realities of providing advice on scientific matters to the president of the United States The reflections of the advisers are supplemented with critical analysis of the role of the science adviser by several well recognized science policy practitioners and experts This volume will be of interest to science policy and presidential history scholars and students *Hearings, Reports and Prints of the House Committee on Science and Astronautics* United States. Federal Policy, Plans, and Organization for Science and Technology United States. Congress. House. Committee on Science and Astronautics, 1974 *The Fragile Contract* David H. Guston, Kenneth Keniston, 1994 Is there a crisis in the relations between research universities and the federal government Is our system which has been the most successful in the world breaking down The Fragile Contract brings together essays by scientists university leaders scholars and seasoned science watchers from government agencies and nonprofit groups to address this issue Neither advocacy nor polemic it explores the social contexts for and influences on research in the university setting to encourage greater understanding of core issues by both politicians and scientists The contributors offer concrete suggestions for building the foundation of a firmer contract that reflects current realities The Fragile Contract appears at a time when congressional committees have openly questioned whether scientists are capable of policing fraud in their own ranks and when fundamental agreements that have covered reimbursements to the universities throughout the post World War II period have been called into question It also addresses the problems of finding science after the Cold War and as well as the problems faced by universities in an international context The Fragile Contract reveals that we are seeing not so much a crisis as a reflection of changing times

Neither science nor government is the same institution that it was when the modern social contract between the two was forged in the late 1940s The authors agree that all parties must make major adjustments to the new environment and research universities must become more active in promoting links to the local and national community Contents The Fragile Contract David H Guston and Kenneth Keniston Universities the Public and the Government Charles M Vest Doing One s Damnedest The Evolution of Trust in Scientific Findings Gerald Holton Integrity and Accountability in Research Patricia Woolf The Public Faces of Science Dorothy Nelkin How Large an R D Enterprise Reinventing the Government University Compact Daryl E Chubin Views from the Benches Funding Biomedical Research and Funding the Physical Sciences Phillip A Sharp and Daniel Kleppner Financing Science after the Cold War Harvey M Sapolsky Indirect Costs and the Government University Partnership Peter Likins and Albert H Teich Science and Technology in Universities in a Technologically Competitive World Eugene B Skolnikoff Concluding Remarks David Hamburg *Federal Policy, Plans, and Organization for Science and Technology, Hearings Before..., 93-2 United States.
