**Performance of Prestressed Concrete Cylinder Pipe (PCCP) in Water Applications** Rahul Manda, ProQuest Dissertations and Theses (Electronic resource collection), 2014 The analysis of water pipes field data is of great importance as it has a significant impact on society and the environment These failures also have an overall impact on the financial burden of the water utilities This thesis consists of a detailed literature review on the previous studies conducted on prestressed concrete cylinder pipe PCCP performance Moreover a detailed national level survey was conducted by the Center for Underground Infrastructure Research and Education CUIRE at UT Arlington to gather and analyze additional field performance data for large diameter pressure pipe including prestressed concrete cylinder pipe Specifically this thesis evaluates the field performance of PCCP which is one of the most conventional and extensively used large diameter 24 in and larger rigid pipes in the U S water pipeline industry This thesis explores different failure parameters such as pipe age diameter manufacturing process type of joints and performance effectiveness of PCCP

AMERICAN WATER WORKS ASSOCIATION.,2018 **Development of Finite Element Model for Analysis of Prestressed Concrete Cylinder Pipe-embedded Cylinder Pipe with Experimental Comparison** Sangit Rauniyar,ProQuest Dissertations and Theses (Electronic resource collection),University of Texas at Arlington. College of Engineering,2013 Prestressed Concrete Cylinder Pipe PCCP is a composite pipe that consists of concrete and steel which has layers of concrete core steel cylinder prestressing wire and mortar coating PCCP is generally constructed of two types a steel cylinder lined with a concrete core and a steel cylinder embedded in a concrete core The former type is called PCCP Lined Cylinder Pipe PCCP LCP and the latter type is called PCCP Embedded Cylinder Pipe PCCP ECP The scope of this paper is limited to PCCP ECP PCCP ECP is a composite material with complex stress phenomenon due to prestress and interaction between different layers of components A three dimensional non linear finite element model is generated by using Abaqus version 6 12 2 a program that is well suited for non linear finite element modeling to simulate the real pipe behavior The PCCP ECP is modeled by considering the contribution of each components and manufacturing process The hexahedron mesh which is popular for accuracy and convergence is used to model the elements The simultaneous effect of shrinkage creep and relaxation are considered Negative temperature is applied to simulate the shrinkage and creep of concrete Also time dependent property is defined to simulate the relaxation of prestressing wire Two full scale experiments three edge bearing tests were conducted to determine the real ECP behavior The three edge bearing test was also simulated by using three dimensional non linear analysis on the modeled PCCP ECP The comparison of results obtained from experiment and finite element modeling is done which shows good agreement between the results The PCCP ECP model can be used for analysis for any loading case

**American Water Works Association Standard for Design of Prestressed Concrete Cylinder Pipe** American National Standards Institute,American Water Works Association,1999 AWWA C305-24 CFRP Renewal and Strengthening of Prestressed Concrete Cylinder Pipe (PCCP) AWWA,2024-12 The scope of this standard covers all PCCP including embedded cylinder pipe ECP and lined cylinder pipe LCP The scope of this standard is limited to the wet lay up application of

CFRP this standard does not apply to pre cured laminates adhered to the pipe wall dry lay up application or automated robotic CFRP installation methods see Sec 2 1 1 This standard is not applicable to the design of CFRP liner for severely deformed PCCP as described in Sec 2 1 2 3      **Prestressed Concrete Designer's Handbook** P.W. Abeles, Mr B K Bardhan-Roy, B.K. Bardhan-Roy, 1981-01-01 The third edition of this authoritative handbook provides the structural designer with comprehensive guidance on prestressed concrete and its effective use covering materials behaviour analysis and design of prestressed elements It includes numerous examples design charts and details of post tensioning systems      **Corrosion Effect of Stray Currents and the Techniques for Evaluating Corrosion of Rebars in Concrete** Victor Chaker, 1986

Detection and Considerations of Corrosion Problems of Prestressed Concrete Cylinder Pipe PS. Rothman, RE. Price, 1985  
Prestressed concrete cylinder pipe PCCP is constructed by circumferentially winding a high strength steel wire under tension around a concrete core containing a sheet steel cylinder which serves as a watertight membrane The service life of such pipe is generally determined by the ability of this steel prestressing wire to retain its integrity under tension Corrosion of the steel wire results in pitting embrittlement or the dissolution of the iron with a corresponding reduction in cross sectional area The result is degradation of the physical strength of the high tensile wire and possible failure of the prestressed concrete cylinder pipe through this mechanism Pipe affected by this failure mode does not develop leaks as in the case of the steel pipe but bursts catastrophically Failure is usually attributed to wire breaks not specifically to corrosion
