evidence and practical considerations This revision accompanies a companion document A Review of Evidence of Adverse Health Effects Associated with Blood Lead Levels The Ethics of Precaution Levente Szentkirályi, 2019-11-22 There are thousands of substances manufactured in the United States to which the public is routinely exposed and for which toxicity data are limited or absent Some insist that uncertainty about the severity of potential harm justifies implementing precautionary regulations while others claim that uncertainty justifies the absence of regulations until sufficient evidence confirms a strong probability of severe harm In this book Levente Szentkirályi overcomes this impasse in his defense of precautionary environmental risk regulation by shifting the focus from how to manage uncertainty to what it is we owe each other morally He argues that actions that create uncertain threats wrongfully gamble with the welfare of those who are exposed and neglect the reciprocity that our equal moral standing demands If we take the moral equality and rights of others seriously we have a duty to exercise due care to strive to prevent putting them in possible harm's way The Ethics of Precaution will be of great interest to researchers educators advanced students and practitioners working in the fields of environmental political theory ethics of risk and environmental policy Everyday Environmental Toxins Areej Hassan, 2015-03-16 This title includes a number of Open Access chapters This collection of timely chapters presents a nuanced study of environmental toxins and the risks they pose to children's development The book details the impact of a number of commonplace environmental toxins focusing on everyday exposure to tobacco smoke lead pesticides and flame retardant Lead and Public Health Paul Mushak, 2011-08-08 The book presents a detailed assessment of the health science of lead and the human health risk assessment models for lead's human health impacts followed by an account of various regulatory efforts in the United States and elsewhere to eliminate or reduce human toxic exposures to lead The science of lead as presented here covers releases of lead into the environment lead's movement through the environment to reach humans who are then exposed and the spectrum of toxic effects particularly low level toxic effects on the developing central nervous system of the very young child The section on human health risk assessment deals with quantifying not only the dose response relationships that underlie toxic responses to lead in sensitive populations but also with the likelihood of toxic responses vis vis environmental lead at some level of exposure This section includes a treatment of computer models of lead exposure particularly those that use lead in whole blood as a key measure Various models convert lead intake via various body compartments into measures of body lead burden Such measures are then directly related to severity of injury The final section of the book deals with past and present regulatory efforts to control lead releases into the human environment Current control efforts present a mixed picture The most problematic issue is the continued presence of lead paint in older housing and lead in soils of urban and mining industry communities Comprehensive assessment of the three major facets of the public health problem of lead the voluminous science the risk assessment approaches and approaches to controlling lead as a public health problem Integration of the above three elements to provide a coherent whole Provides a single source of
