Good nutrition needs more than just carbohydrates, protein and fat. Humans may eat enough calories to live, but may have a diet that fails to provide sufficient levels of crucial vitamins and minerals that allow them to be mentally and physically healthy. A lack of these essential vitamins and minerals often results in what is termed as 'hidden hunger', where the signs of undernutrition are less visible and people may not even be aware of it. Hidden hunger has been estimated to affect as many as 2 billion people globally. Vitamin and mineral deficiencies account for an estimated 7.3% of the global disease burden, with iron and vitamin A deficiencies ranking among the top 15 leading causes of the global disease burden. Hidden hunger impairs the mental and physical development of children and adolescents and can result in lower IQ, stunting, and blindness; women and children in low-income countries are especially vulnerable. Hidden hunger also reduces the productivity of adult men and

women due to increased risk of illness and reduced work capacity.

Micronutrients are substances needed in amounts of less than 100 mg (less than the weight of two grains of salt!) per day for good health, growth and development. They include all vitamins, as well as some minerals such as zinc, iron, chromium, copper, manganese and iodine. Micronutrients play important roles in nutrition, including ensuring healthy growth and development, resistance to infection, and specific functions such as good vision, bone strength, or oxygen-carrying in red blood cells. Many micronutrients are limited in human diets, largely due to high intakes of energy-dense, nutrient-poor staple foods. In developing countries, many individuals do not have the resources to purchase or cannot access a wide range of nutritious foods such as meat, eggs and fish, as well as fruit and vegetables in order to meet their nutritional requirements.

Combating Micronutrient Deficiencies Brian Thompson, Leslie Amoroso, 2011. This book, inclusive of 19 chapters, provides discussions on the benefits and limitations of food-based approaches for the prevention and control of micronutrient malnutrition. Different chapters focus on specific relevant topics, including current developments in food-based approaches and their program applications; relevance of agricultural interventions to nutrition; impact of multi-sectoral programmes with food-based approaches; components in alleviating undernutrition and micronutrient malnutrition; animal source foods as a food-based approach to address nutrient deficiencies; aquaculture's role in improving food and nutrition security; benefits of vegetables and fruits in preventing and combating micronutrient malnutrition; benefits of food-based approaches for overcoming single-specific micronutrient deficiencies; and food fortification. This book will be of great use to professionals interested in public health, human nutrition, micronutrient deficiency interventions, food and nutrition security, policy interventions, and agricultural research.

Micronutrient Deficiencies in the First Months of Life F. Delange, Keith P. West, 2003-01-01. In many parts of the world, deficiencies in vitamins, minerals, and trace elements during the early months of life have dramatic consequences on the health and development of infants and young children. The nutritional status of the mother greatly influences breast milk micronutrient levels and hence the nutritional status of the infant. This publication, written by leading investigators and clinicians, offers an up-to-date review of micronutrient requirements and the assessment of micronutrient status of mothers and young infants, followed by the epidemiology and health consequences of micronutrient deficiencies. It also includes different prophylactic and therapeutic approaches such as the most recent research on both single and multiple micronutrient interventions during pregnancy, lactation, and early infancy. This publication will be of great assistance to pediatricians, clinical investigators, health workers, and nutritionists engaged in the prevention and treatment of micronutrient deficiencies.
