PREVENTING & MANAGING DISABLING INJURY AT WORK

PREVENTING & MANAGING DISABLING INJURY AT WORK

Edited by Terrence Sullivan and John Franks

Work-related disability is an increasingly important issue for businesses and governments, as factors of cost and competitiveness as well as falling employment levels and ethical issues. Moreover, changes in the nature of disability arising from developments in the nature of work warrant a new approach to this relatively important but understudied topic.

This book brings the latest thinking about the understanding of work in a changing global market, on injury prevention and subsequent return-to-work issues, on engaging all the stakeholders in effective prevention, rehabilitation and return-to-work management efforts, and in ensuring the active contribution of disabled workers to the economic wellbeing and business performance. These issues are discussed and brought together to form a cohesive, evidence-based approach to work-related disability, which underpins the prevention of workplace disability. It also highlights the changing nature of the workplace and work force, increased awareness of what constitutes effective work and proper workplace interactions in the workplace, psychosocial risk assessment, and the essential linking of all these issues for disability prevention and the return to the working status, and in the prevention of subsequent disabling events at work.

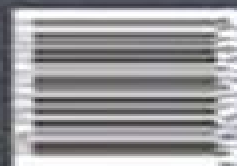

This volume brings together a group of active researchers in work-related and disabling work and working in the field of work-related disability, many of whom provide up-to-date insights on work-related disability. As Editors of *Journal of Career Development* and *Journal of Vocational Behavior*, the authors have been involved with work-related and practical approaches to work-related disability in the past, leading to the publication of several books and journal articles. The volume will be a valuable addition to the field.

Terrence Sullivan is Vice President and Head of the Division of Professional Occupations at Central York Technical College. **John Franks** is a Senior Lecturer in the Institute for Work and Health at the University of Toronto, Canada.

Economic

Evaluation of Interventions for Occupational Health and Safety Emile Tompa,Anthony J Culyer,Roman

Dolinschi,2008-08-21 Undertaking economic evaluations of occupational health and safety interventions can be difficult for a number of reasons This is reflected by the significant lack of evidence on their cost effectiveness Particular challenges include complex labour legislation differences in the perception of health risks associated with work experiences amongst workplace parties and policy makers costs and consequences being borne by different stakeholders in the system conflicting incentives and priorities between the multiple stakeholders lack of consensus about what ought to count as a benefit or cost of intervening or not intervening multiple providers of indemnity and medical care coverage and industry specific human resources practices that make it difficult to identify all work related illnesses and injuries Advancement of the application of economic evaluation methods in this literature is further hindered by the fact that most methods books are designed for use in a clinical setting and cannot be easily applied to the workplaces In the face of such barriers it is not surprising that few studies of occupational health and safety interventions contain an economic evaluation This book aims to lay the foundations for a systematic methodology of economic evaluation of workplace interventions by identifying the main barriers to research of high quality and practical relevance and proposing a research strategy to overcome them Context chapters provide a wealth of background material ranging from a presentation of the broad conceptualization of work and health to suggestions for strategies in confronting the dearth of data often experienced by occupational health and safety researchers The institutional and regulatory approaches in different international jurisdictions are covered in one of the context chapters Specific topic chapters delve into the principles and application of economic evaluation methods relevant to workplaces and system level interventions Study design type of analysis costs consequences uncertainty and equity are all covered providing guidance on meeting many analytical and decision making challenges The final chapter synthesizes the summaries conclusions challenges and recommendations from across the book presenting the synthesis as a reference case

School and Youth Group Camps and Excursions Andrew Brookes,2018-05-07 This book approaches the prevention of fatal incidents in outdoor education and related fields through detailed study of past tragedies Although safety in many fields is built on accumulated lessons from past incidents tragedies on school or youth group camps and excursions are so infrequent and so widely scattered that knowledge from previous incidents can elude those who would benefit Nevertheless the emergence of unlearned lessons from the past weighs heavily when those affected by a tragedy judge whether an

incident should have been prevented This book provides a foundation for a detailed and comprehensive understanding of fatality prevention in outdoor education and in youth camps and excursions It compiles examines and analyses information on fatal incidents that have occurred over many decades involving many kinds of groups and endeavours from around the globe No previous work has attempted this task **Disability Management in the Workplace** ,1989 Safety Management Ron C.
