wastewater conveyance and city defense are some of the uses that were responsible for this choice. Even floods played an important role favoring the soil fertilization. Man-made actions, however, especially in urban watersheds, significantly modify the natural water cycle, increasing the magnitude of floods and their potential damages. Consequently, flood damages are one of the most important issues to be dealt with in the present days. Several different studies show that floods are one of the most important natural hazards with several losses, both in terms of lives and money. Particularly in urban areas, the amplification of floods may cause important economic losses and lead to critical social risks to the cities and their population when inundation reaches the built environment. This situation is becoming more frequent each day. Recent history shows that urbanization is an inevitable trend, and today the most part of the world population lives in cities. It is difficult, however, to adequately manage urban flood problems because flood risk and flood costs are not easy to quantify. Traditionally, flood risk and flood cost assessments face difficulties due to the subjective nature of these evaluations and to the inexistence of standardized methodologies. This book tries to show different techniques and approaches to help in treating flood problems. Chapters 1 and 2 show simplified mathematical modeling of floods and results of multifunctional landscape flood control measures in the city of Rio de Janeiro. The remaining book chapters present remedial works against debris after floods in Venezuela and Measures for Mitigation of Flood areas in Japan. There are also presented studies related with Flood Risk Assessment and Management in Mediterranean Basins. The final chapter shows an interesting study related to the attitudes of residents in the Tokyo Bay area toward flood hazards.

River Administration and Institutional Aspects in Japan Hideaki Kawasaki, 1993. The river administration in Japan is pertained by a complicated legal system, but it is easier to grasp River Law as the central axis. Many relevant laws start from the River Law and end with the River law, which is the legal foundation of Japan's river administration. The basic concept of the River Law, fully revised in 1964, is that every river and its water is property for public use. Rivers are therefore systematically and comprehensively administrated in every basin by the river administrator.

Integrated Flood Risk Management Kuniyoshi Takeuchi, 2022-10-10. This book tackles the question of how we can manage flood-related disaster risks, such as from typhoons, monsoons, and torrential rain, which have been intensified by climate change and have generated unprecedented floods, landslides, and debris flows worldwide. It presents recent conceptual developments in disasters, risk, and resilience, and surveys UN policies on environment and development, as well as disaster management. Sustainable and resilient development requires an integrated approach and human empowerment. Japan provides a useful example of effective flood management and disaster recovery in its current strategies for river and basin integrated flood management. Very few English language books present up-to-date Japanese experiences for students and professionals in the context of global trends relevant to a time of climate change and with global application. Outlines an integrated approach to flood risk management in the context of UN initiatives. Details Japanese good practice developed through culture and the needs of a changing society. Integrated Flood Risk Management is ideal for professionals working for

environmental agencies hydrologists and engineers as well as students of disaster management and water resources development Turbulent Streams Roderick I. Wilson,2021-05-31 In *Turbulent Streams An Environmental History of Japan's Rivers 1600 1930* Roderick I Wilson describes how the rivers of Japan are both hydrologically and historically dynamic Today these waterways are slowed channeled diverted and dammed by a myriad of levees multiton concrete tetrapods and massive multipurpose dams In part this intensive engineering arises from the waterways falling great elevations over short distances flowing over unstable rock and soil and receiving large quantities of precipitation during monsoons and typhoons But this modern river regime is also the product of a history that narrowed both these waterways and people's diverse interactions with them in the name of flood control Neither a story of technological progress nor environmental decline this history introduces the concept of environmental relations as a category of historical analysis both to explore these fluvial interactions and reveal underappreciated dimensions of Japanese history **Selected Water Resources Abstracts** ,1973

Library of Congress Subject Headings Library of Congress,Library of Congress. Office for Subject Cataloging Policy,2011 **Japan's Beach Erosion: Reality And Future Measures** Takaaki Uda,2010-06-23 Beaches in Japan have been eroding since the 1970s as a result of the artificial land alterations Approximately 3000 fishing ports and 1000 commercial ports have been built nationwide as well as 2532 large dams being constructed in the upstream basins of large rivers Due to the port and dam developments fluvial sand supply has significantly reduced resulting in shoreline recession around the river mouths Continuous sand supply along the coastline has also been obstructed by the port breakwaters The formation of wave shelter zone by the port breakwaters induce longshore sand transport thereby leading to an accretion of large amount of sand in the wave shelter zone and erosion in the surrounding area Thus almost all causes of the beach erosion in Japan are due to anthropogenic factors The exact situation of the beach erosion has never been clear in literatures that are written in Japanese or in English Coastal engineers can and should learn from these results otherwise the same situation and problems which were induced by excessive coastal development without protection measures and due attention given to nearby coasts will recur throughout the world Textbooks on coastal engineering that were already published describe only the theoretical fundamentals of the subject but lack the practical perspectives and field studies The book examines many coastal areas as examples highlighting the various erosion factors which should be avoided elsewhere globally This book was first published in Japanese in 2004 and was translated into English by the present author *Global Warming and Climate Change* A. Marquina,2010-02-24 This compendium looks at Asian and European policies for dealing with climate change and possible impacts on conflicts and security It clarifies the impacts of climate change on natural resources on the frequency and expansion of natural disasters and the repercussions for environmentally induced migration Local Government in Japan Kurt Steiner,1965 A Stanford University Press classic *Forging Environmentalism* Joanne R Bauer,2015-01-28 Drawing on an unusually rich empirical base this timely and compelling book examines how

environmental values are constructed and legitimized within the policy process. It trains the spotlight on four environmentally significant countries: China, Japan, India, and the United States, representing a wide diversity of cultural, social, economic, and political characteristics. Through a combination of case studies and comparative analysis, the contributors illuminate cultural assumptions, standards, and analytic techniques that shape environmental actions and policies around the world. Forging Environmentalism provides valuable direction regarding what can be done to secure public support for environmental policies. Incorporating expert legal, economic, philosophical, sociological, and political perspective points the way toward the possibilities for a convergence of environmental norms and values across diverse cultures.

The Dilemma of Boundaries Makoto Taniguchi, Takayuki Shiraiwa, 2012-05-19. Water circulates continuously and seamlessly on Earth with little regard for the boundaries we draw. There are natural boundaries, as between land and ocean and surface and subsurface environments, as well as human or demographic boundaries between nations, cultures, and religions. Although considered necessary by societies, these human-created boundaries disrupt natural water circulation, leading to serious water-related environmental problems. The dilemma of how to manage water beyond our boundaries remains, and nations have different ways and means of controlling each form of water, whether as vapor, surface water, groundwater, or seawater. Recent findings on the interaction of water from land, oceans, and the atmosphere encourage researchers to undertake collaborative work that goes beyond the boundaries of each discipline, be it oceanography, surface and subsurface hydrology, climatology, or glaciology. Drawing on all these fields, the book focuses on two major boundaries: that between surface water and ground water, and that between terrestrial water and ocean water. This comprehensive work is of great value to experts in academia, international organizations, consulting firms, water resources, fisheries, and urban development planning agencies.

Research Handbook on Flood Risk Management Jessica Lamond, David Proverbs, Namrata Bhattacharya Mis, 2024-04-12. Through its use of dynamic and people-centred paradigms, it explores urban flood management within localities, properties, neighbourhoods, and cities.

Principles of Water Law and Administration Dante A. Caponera, Marcella Nanni, 2019-05-03. This book, which was first published in 1992 and then updated in 2007, provides a tool for dealing with the legal and institutional aspects of water resources management within national contexts and at the level of transboundary water resources. Like its two previous editions, it seeks to cover all aspects that need to be known in order to attain good water governance, but it provides updates concerning developments since 2007. These relate, inter alia, to the following: the greening of water law, which calls for the progressive integration of environmental law principles into domestic and international water law; the adoption by the International Law Commission in 2008 of the Draft Articles on the Law of Transboundary Aquifers; and subsequent developments, the emergence of the right to water as a self-standing human right; the adoption of domestic water laws supporting integrated water resources management (IWRM) and enhanced public

participation in planning and decision making the integration into these laws of tools facilitating adaptive water management as a response to climate variability and change progress in the implementation of EU law recent international agreements and judicial decisions efforts of regional organizations other than the EU to steer cooperation in the management of transboundary water resources and the harmonization of national laws institutional mechanisms for the management of transboundary water resources surface and underground Unique in its scope and nature the book identifies the legal and institutional issues arising in connection with water resources management and provides guidelines for possible solutions in a manner accessible to a wide range of readers Thus it is a useful reference for lawyers and non lawyers engineers hydrologists hydrogeologists economists sociologists dealing with water resources within government institutions river basin commissions international organizations financing institutions and academic institutions among other things and also for students of disciplines related to water resources

Japanese Environmental Design and Management for Sustainable Urbanism Takashi Ariga, 2025-03-31 This book responds to the need to rehabilitate the holistic urban environment by introducing planning approaches which focus on the Japanese idea of Satoyama Sustainable development has become a prime concern of planning and society is expending great efforts to achieving this end Appreciation of cities environmental assets has become more widely accepted and deeply taken to heart not only by specialists but also by citizens and communities The balance between human settlements and the natural environment has changed This has posed an environmental issue in that urban settlements engulf the greenbelts and water networks that help sustain the urban natural environment Given these issues we must consider a morphology toward creating a more sustainable urban system that regenerates the relationship between human settlements utilizing the architectural resources within our urban fabric and its interaction with the surrounding natural environments This book is a guide to the theory methodologies and practical applications of environmental design and city and regional planning of regenerative systems toward sustainable urbanism This book also explores the socio cultural and economic implications of sustainable urbanism and examines urban forms land use patterns and their built up environments that can result from the applications This book will appeal to a wide range of readers including researchers and students of architectural design urban planning heritage protection and sustainable development but also professionals who are involved in improving the relationship of human settlements with natural resources

Report of the Secretary of the Navy Being Part of the Message and Documents Communicated to the Two Houses of Congress, 1893 *Public Spheres, Private Lives in Modern Japan, 1600-1950* Gail Bernstein, Andrew Gordon, Kate Wildman Nakai, 2020-03-17 The eleven chapters in this volume explore the process of carving out in discourse and in practice the boundaries delineating the state the civil sphere and the family in Japan from 1600 to 1950 One of the central themes in the volume is the demarcation of relations between the central political authorities and local communities The early modern period in Japan is marked by a growing sense of a unified national society with a long common history that

existed in a coherent space The growth of this national community inevitably raised questions about relationships between the imperial government and local groups and interests at the prefectural and village levels Moves to demarcate divisions between central and local rule in the course of constructing a modern nation contributed to a public discourse that drew on longstanding assumptions about political legitimacy authority and responsibility as well as on Western political ideas
