Drainage Basin Dynamics Pravat Kumar Shit, Biswajit Bera, Aznarul Islam, Sandipan Ghosh, Gouri Sankar Bhunia, 2022-01-01 This volume provides a versatile introduction to the study of drainage basin evolution morphology drainage basin hydrology and sedimentology human interference natural and anthropogenic hazards and various management techniques This book offers the responsible factors of sediment yield and their absolute and specific growth and rate of delivery through tributaries to the main streams Rivers are important geomorphic agents which reflect an amazing variety of form and behaviour showing the wide range of natural environment in which they are originated The drainage system evolution and spatial network development within the dynamic nature are being discussed and how they are adjusted in the geomorphic time scale over the millions of years This book shows how drainage systems function and react to change and why this thoughtful is required for flourishing integrated basin management In tropical and sub tropical countries population pressures as well as different developmental projects are being executed on the drainage basin without proper planning Today scientists consider drainage basin as an administrative unit during implementation of regional projects In this context this book will carry a bench mark for scholars and young scientists Fractal River Basins Ignacio Rodríguez-Iturbe, Andrea Rinaldo, 1997 This book provides a theoretical basis to the arrangement of river basins and networks **Ecological Health of River Basins in Forested Regions of Eastern Washington and Oregon** R. River Basins and Coastal Systems Planning Within the U.S. Army Corps of Engineers National Research

Council, Division on Earth and Life Studies, Water Science and Technology Board, Ocean Studies Board, Committee to Assess the U.S. Army Corps of Engineers Methods of Analysis and Peer Review for Water Resources Project Planning, Panel on River Basin and Coastal Systems Planning, 2004-08-18 The U S Army Corps of Engineers the Corps has played a large and important role in shaping water resources systems in the United States since Congress first tasked it in 1824 to improve navigation on the Ohio and Mississippi Rivers Since then rivers have been modified for navigation and flood control harbors have been dredged for shipping and coastlines are routinely fortified against erosion and beach loss Recent decades have seen an overall decline in budgets for civil works project construction yet the range of objectives for water resources projects has broadened as society places more value on environmental and recreational benefits Thus the Corps portfolio of water resources projects has changed considerably There is a reduced emphasis on traditional construction projects and an increased focus on maintenance and reoperation of existing projects such as locks dams and levees and on environmental restoration projects An integrated approach to water resources planning at the scale of river basins and coastal systems is widely endorsed by the academic and engineering communities The Corps mission expertise and experience give it immense potential to alter the structure and functioning of the nation s waterways and coasts As might be expected in a large and complex organization answering to a range of public and private demands implementation of these new policies and objectives is neither consistent nor complete River Basins and Coastal Systems Planning within the U S Army Corps of Engineers recommends improvements in the Corps water resource project planning and review process This report compares economic and environmental benefits and costs over a range of time and space scales suggests multiple purpose formulation and evaluation methods and recommends integration of water development plans with other projects in the region **River**

Morphology Joachim Mangelsdorf, Karl Scheurmann, Fritz-Heinz Weiß, 2013-06-29 River Morphology deals with the interaction between flowing waters in rivers and their environment Based on the representation of basic flow parameters the geometry classification and historic development of rivers are treated Any change in the environment occurring naturally or caused by man leads to very sensitive reactions in river flow and transport Thus this synopsis of geoscientific studies and hydraulic engineering experience is presented to help develop the understanding of how to handle nature with care

Morphometry of Drainage Basins I. Zavoianu, 2011-08-19 The book describes the drainage basin as a system unit resulting from the interaction between runoff and topography a lengthy process of evolution that occurs according to well defined laws It aims not to quantify the agents which created the present forms but to analyse the forms themselves in order to establish the laws according to which they develop and to define a series of inter relationships between morphometrical parameters and river discharge *Handbook of Climate Change Impacts on River Basin Management* Saeid Eslamian, Mir Bintul Huda, Nasir Ahmad Rather, Faezeh A. Eslamian, 2024-08-26 Climate change not only involves rising temperatures but it can also alter the hydro meteorological parameters of a region and the corresponding changes emerging in the various biotic

or abiotic environmental features One of the results of climate change has been the impact on the sediment yield and its transport These changes have implications for various other environmental components particularly soils water bodies water quality land productivity sedimentation processes glacier dynamics and risk management strategies to name a few This volume presents a diverse collection of case studies from researchers across the globe examining the impacts of climate change on river basin management in various geographical hydrological and socioeconomic contexts The case studies yield important insights that can inform strategies to build resilience and adapt river basins to a changing climate

Environmental Management of River Basin Ecosystems Mu. Ramkumar,K Kumaraswamy,R. Mohanraj,2015-02-18 This book offers a unique collection of inter and multidisciplinary studies on river systems Rivers have been the prime source of sustenance since the advent of civilization and river systems often form the basis for agriculture transport water and land for domestic commercial and industrial activities fostering economic prosperity A river basin is a basic geographical and climatological unit within which the vagaries of natural processes act and manifest themselves at different spatio temporal scales Even if compared side by side no two river basins respond to natural processes in the same way and thus it has long been recognized that each river basin is unique Hence any developmental activity or conservation effort has to be designed and implemented to match each unique river basin With the burgeoning population and increasing dependency on natural resources understanding and maintaining river systems has become increasingly important This book provides a varied reference work on and unprecedented guidelines for conducting and implementing research on river basins and for managing their ecological development

River Dynamics Bruce L. Rhoads,2020-05-07 Rivers are important agents of change that shape the Earth s surface and evolve through time in response to fluctuations in climate and other environmental conditions They are fundamental in landscape development and essential for water supply irrigation and transportation This book provides a comprehensive overview of the

geomorphological processes that shape rivers and that produce change in the form of rivers It explores how the dynamics of rivers are being affected by anthropogenic change including climate change dam construction and modification of rivers for flood control and land drainage It discusses how concern about environmental degradation of rivers has led to the emergence of management strategies to restore and naturalize these systems and how river management techniques work best when coordinated with the natural dynamics of rivers This textbook provides an excellent resource for students researchers and professionals in fluvial geomorphology hydrology river science and environmental policy
