**The Ecology, Exploitation and Conservation of River Turtles** Don Moll, Edward O. Moll, 2004-04-08 The underlying theme of this book is that a widespread taxonomically diverse group of animals important both from ecological and human resource perspectives remains poorly understood and in decline while receiving scant attention from the ecological and conservation community This volume proposes a comprehensive overview of the world's river turtles ecology conservation and management It begins with a categorization of taxa which inhabit flowing water habitats followed by information on their evolutionary and physical diversity and biogeography Within the framework of ecology the authors discuss the composition of river turtle communities in different types of lotic habitats and regions population dynamics movements reproductive characteristics and behavior predators and feeding relationships In a conservation and management section the authors identify and evaluate the nature and intensity of factors which threaten river turtle survival almost all of which involve direct human exploitation or indirect effects of human induced habitat alteration and degradation They then list and evaluate the various schemes which have been proposed or employed to halt declines and restore populations and make recommendations for future management plans for specific species and regions In closing they state their viewpoint concerning future research directions and priorities and an evaluation of future prospects for survival of the world's river turtle species

**Mississippi and Illinois Rivers Pools 24-26 (MO,IL)**, 1976 **The Rivers Handbook** Peter P.

Calow, Geoffrey E. Petts, 2009-07-08 Fast changing legislation and increasing environmental awareness within the non scientific community demands that the modern approach to the management of rivers and water resources should be based on a sound understanding and application of the scientific and ecological principles that underlie freshwater processes. In two volumes *The Rivers Handbook* offers an expert and exhaustive insight into the principles, methods and tools of modern river management always within an integrated and environmentally acceptable framework. This second volume develops the principles and philosophies expounded in the first volume into the management sphere, organizing the approach around problems, diagnosis and treatment. A fully comprehensive reference to sound methods of modern river management. The ideal information resource for all river managers. *River Ecology and Man* Ray T. Oglesby, Clarence A. Carlson, James A. McCann, 1972 **River Ecology and Man** Ray T. Oglesby, Carolus Axelius Carlson, James A. McCann, University of Massachusetts at Amherst, 1972 **The Ecology of Regulated Streams** James Ward, 2013-06-29 The idea for an international symposium on regulated streams was conceived over an open faced sandwich at the R. These funds permitted intellectual exchange between scientists from eight countries on four continents. We extend personal thanks to Dr K W Stewart, President of NABS and the NABS Program Committee including Drs E C Masteller, E R Brezina and W P Kovalak. These individuals and other officers and members of the Executive Committee assisted us with the many details leading to organization and staging of a scientific forum. Discussions with Dr John Cairns Jr and Dr G Richard Marzolf during the early planning stage were most helpful. *Dams and Geomorphology* P.J. Beyer, 2005-12-19 Dams profoundly impact the geomorphology of rivers by altering the natural patterns of water, sediment and energy flow in rivers. These changes have a largely negative impact on aquatic and riparian ecosystems upstream and downstream of the dam. Natural dams also impact river geomorphology although with positive and negative repercussions for aquatic and riparian organisms. In 2002 the 33rd Binghamton Geomorphology Symposium convened under the theme Dams and Morphology and featured invited papers and contributed posters on topics of natural dams, artificial dams and dam removal. Fourteen of these papers have been included in this volume. **Comparative Reservoir Limnology and Water Quality Management** M. Straskraba, J.G. Tundisi, A. Duncan, 2013-03-09 The volume starts with comparative reservoir limnology and deals with problems relating to tropical, semi arid and temperate reservoirs. The second part concerns mathematical models of reservoirs including new techniques for investigating their limnology. These cover physical, chemical and biological phenomena, remote sensing and the use of modelling to establish the most efficient strategy for water quality sampling. In the third on reservoir water quality management, the potential available in fish population management for biomanipulation of reservoir water quality is introduced. Also included is a valuable section on a wide range of water quality measures coming from the well known Czech Hydrobiological Laboratory. Finally the editors summarise the present state of reservoir limnology. This book will be of interest to hydrobiologists and aquatic ecologists, reservoir and sanitary engineers, fisheries officers, postgraduate teaching
