River and Lake Ice Engineering George D. Ashton,1986 **A Mathematical Model for River Ice Processes** A. M. Wasantha Lal,Hung Tao Shen,1993 River Ice Processes and Ice Flood Forecasting Karl-Erich Lindenschmidt,2019-09-25

This book exposes practitioners and students to the theory and application of river and lake ice processes to gain a better understanding of these processes for modelling and forecasting It focuses on the following processes of the surface water ice freeze up ice cover thickening ice cover breakup and ice jamming The reader will receive a fundamental understanding of the physical processes of each component and how they are applied in monitoring and modelling ice covers during the winter season and forecasting ice floods Exercises accompany each component to reinforce the theoretical principles learned These exercises will also expose the reader to different tools to process data such a space borne remote sensing imagery for ice cover classification A thread supporting numerical modelling of river ice and lake ice processes runs through the book

A Laboratory Investigation of the Mechanics and Hydraulics of River Ice Jams, 1976 This report presents experimental results on the conditions of initiation of an ice jam by a simple surface obstruction on the equilibrium thickness of an ice jam formed by accumulation and submergence of ice floes and on the compression strength of floating fragmented ice cover In the study on ice jam initiation it was found that the minimum concentration of floes in the opening of the obstruction at which a jam occurs is nearly independent of the ratio of width of constricted passage to channel width and is proportional to a negative power of the ratio of floe length to width of constricted passage From energy analysis of floe submergence a relationship relating the thickness of a jam formed by accumulation and submergence of floes to the approach flow characteristics was derived and found to fit satisfactorily the experimental data In experiments on compression strength of floating fragmented ice cover it was found that the compressive strength is inversely proportional to compression velocity and independent of cover length
