**Lake Victoria Monitored from Space** Joseph Awange, 2020-12-17 This book employs a suite of remotely sensed products and advanced technologies to provide the first comprehensive space based sensing of Lake Victoria the world's second largest freshwater lake that supports a livelihood of more than 42 million people modulates regional climate but faces myriads of challenges Proper understanding of the lake and changes in its physical dynamics e.g. water level shorelines and areal dynamics resulting from the impacts of climate variation and climate change as well as anthropogenic e.g. hydropower and irrigation is important for its management as well as for strategic development before during and after climate extremes e.g. floods and droughts in order to inform policy formulations planning and mitigation measures Owing to its sheer size and lack of research resources commitment by regional governments that hamper its observations however it is a daunting task to undertake studies on Lake Victoria relying solely on in situ boots on the ground measurements which are sparse missing in most cases inconsistent or restricted by governmental red tapes To unlock the potentials of Lake Victoria this book argues for the removal of obsolete Nile treaties signed between Britain Egypt and Sudan in the 1920s and 1950s which prohibits its utilization by the upstream countries The book is useful to those in water resources management and policy formulations hydrologists environmentalists engineers and researchers In a unique cross disciplinary approach the Book articulates the various climatic impacts and explanations from natural and anthropogenic origins which affected Lake Victoria and its vicinity including the drastic increase and depletion of water level in the Lake and dams floods and droughts water quality security crop health food
