The Ecology of War in China Micah S. Muscolino, 2015 This book explores

the interplay between war and the environment in Henan Province a hotly contested frontline territory that endured massive environmental destruction and human disruption during the conflict between China and Japan that raged during World War II In a desperate attempt to block Japan's military advance Chinese Nationalist armies under Chiang Kai shek broke the Yellow River's dikes in Henan in June 1938 resulting in devastating floods that persisted until after the war's end Greater catastrophe struck Henan in 1942-1943 when famine took some two million lives and displaced millions more Focusing on these war induced disasters and their aftermath this book conceptualizes the ecology of war in terms of energy flows through and between militaries societies and environments Ultimately Micah Muscolino argues that efforts to procure and exploit nature's energy in various forms shaped the choices of generals the fates of communities and the trajectory of environmental change in North China

Ocean Energy R. H. Charlier, Charles W. Finkl, 2009-02-08 Engineers dreams and fossil energy replacement schemes can come true Man has been tapping the energy of the sea to provide power for his industries for centuries Tidal energy combined with that of waves and marine winds rank among those most successfully put to work Large scale plants are capital intensive but smaller ones particularly built in China have proven profitable Since the initiation of the St Malo project in France similar projects have gone into active service where methods have been devised to cut down on costs new types of turbines developed and cost competitiveness considerably improved Tidal power has enormous potential The book reviews recent progress in extracting power from the ocean surveys the history of tidal power harnessing and updates a prior publication by the author

The Great Transition: Shifting from Fossil Fuels to Solar and Wind Energy Lester R. Brown, 2015-04-20 The great energy transition from fossil fuels to renewable sources of energy is under way As oil insecurity deepens the extraction risks of fossil fuels rise and concerns about climate instability cast a shadow over the future of coal a new world energy economy is emerging The old economy fueled by oil natural gas and coal is being replaced with one powered by wind solar and geothermal energy The Great Transition details

the accelerating pace of this global energy revolution As many countries become less enamored with coal and nuclear power they are embracing an array of clean renewable energies Whereas solar energy projects were once small scale largely designed for residential use energy investors are now building utility scale solar projects Strides are being made some of the huge wind farm complexes under construction in China will each produce as much electricity as several nuclear power plants and an electrified transport system supplemented by the use of bicycles could reshape the way we think about mobility

Van Nostrand's Eclectic Engineering Magazine ,1872 **A History of Energy Flows** Anthony N. Penna,2019-09-18
This book presents a global and historical perspective of energy flows during the last millennium The search for sustainable energy is a key issue dominating today s energy regime This book details the historical evolution of energy following the overlapping and slow flowing transitions from one regime to another In doing so it seeks to provide insight into future energy transitions and the means of utilizing sustainable energy sources to reduce humanity s fossil fuel footprint The book begins with an examination of the earliest and most basic forms of energy use namely that of humans metabolizing food in order to work with the first transition following the domestication and breeding of horses and other animals The book also examines energy sources key to development during the industrialization and mechanization such as wood and coal as well as more recent sources such as crude oil and nuclear energy The book then assesses energy flows that are at the forefront of sustainability by examining green sources such as solar wind power and hydropower While it is easy to see energy flows in terms of revolutions transitions have taken centuries to evolve and transitions are never fully global as for example wood remains the primary fuel source for cooking in much of the developing world This book not only demonstrates the longevity of energy transitions but also discusses the possibility for reducing transition times when technological developments provide inexpensive and safe energy sources that can reduce the dependency on fossil fuels This book will be of great interest to students and scholars of energy transitions sustainable energy and environmental and energy history **Geography** David Waugh,2000 Plate tectonics Earthquakes and volcanoes Weathering and slopes Glaciation Coasts Deserts Weather and climate Soils Biogeography Population Urbanisation Farming and food supply Rural land use Energy resources Manufacturing industries Transport and interdependence World development **The Meaning of Rivers** T. S. McMillin,2011-03-15 In the continental United States rivers serve to connect state to state interior with exterior the past to the present but they also divide places and peoples from one another These connections and divisions have given rise to a diverse body of literature that explores American nature ranging from travel accounts of seventeenth century Puritan colonists to magazine articles by twenty first century enthusiasts of extreme sports Using pivotal American writings to determine both what literature can tell us about rivers and conversely how rivers help us think about the nature of literature The Meaning of Rivers introduces readers to the rich world of flowing water and some of the different ways in which American writers have used rivers to understand the world through which these waters flow Embracing a hybrid essayistic

form part literary theory part cultural history and part fieldwork The Meaning of Rivers connects the humanities to other disciplines and scholarly work to the land Whether developing a theory of palindromes or reading works of American literature as varied as Henry David Thoreau s A Week on the Concord and Merrimack Rivers and James Dickey s Deliverance McMillin urges readers toward a transcendental retracing of their own interpretive encounters The nature of texts and the nature of nature require diverse and versatile interpretation interpretation requires not only depth and concentration but also imaginative thinking broad mindedness and engaged connection making By taking us upstream as well as down McMillin draws attention to the potential of rivers for improving our sense of place and time
