## **Rivers And Landscape:**

*Rivers in the Landscape* Ellen Wohl, 2019-12-23 Rivers are the great shapers of terrestrial landscapes Very few points on Earth above sea level do not lie within a drainage basin Even points distant from the nearest channel are likely to be influenced by that channel Tectonic uplift raises rock thousands of meters above sea level Precipitation falling on the uplifted terrain concentrates into channels that carry sediment downward to the oceans and influence the steepness of adjacent hill slopes by governing the rate at which the landscape incises Rivers migrate laterally across lowlands creating a complex topography of terraces floodplain wetlands and channels Subtle differences in elevation grain size and soil moisture across this topography control the movement of ground water and the distribution of plants and animals Rivers in the Landscape Second Edition emphasizes general principles and conceptual models as well as concrete examples of each topic drawn from the extensive literature on river process and form The book is suitable for use as a course text or a general reference on rivers Aimed at advanced undergraduate students graduate students and professionals looking for a concise summary of physical aspects of rivers Rivers in the Landscape is designed to emphasize the connectivity between rivers and the greater landscape by explicitly considering the interactions between rivers and tectonics climate biota and human activities provide a concise summary of the current state of knowledge for physical process and form in rivers reflect the diversity of river environments from mountainous headwater channels to large lowland floodplain rivers and from the arctic to the tropics reflect the diverse methods that scientists use to characterize and understand river process and form including remote sensing field measurements physical experiments and numerical simulations reflect the increasing emphasis on quantification in fluvial geomorphology and the study of Earth surfaces in general provide both an introduction to the classic foundational papers on each topic and a guide to the latest particularly insightful and integrative references

**Rivers in the Landscape** Ellen Wohl, 2014-03-07 Rivers in the Landscape Science and Management offers a comprehensive and accessible overview of the current state of knowledge for river process and form taking a holistic approach to the subject with coverage of integrated river science and management in practice The processes and forms present in channelized surface flow rivers are systematically explored in this book to emphasize the connectivity between rivers and the greater landscape by explicitly considering the interactions between rivers and tectonics climate biota and human activities provide a concise summary of the current state of knowledge for physical process and form in rivers reflect the diversity of river environments from mountainous headwater channels to large lowland floodplain rivers and from the arctic to the tropics reflect the diverse methods that scientists use to characterize and understand river process and form including remote sensing field measurements physical experiments and numerical simulations reflect the increasing emphasis on quantification in fluvial geomorphology and the study of Earth surfaces in general provide both an introduction to the classic foundational papers on each topic and a guide to the latest particularly insightful and integrative references Aimed at

advanced undergraduate students graduate students and professionals looking for a concise summary of physical aspects of rivers this book emphasizes general principles and conceptual models as well as concrete examples of each topic drawn from the extensive literature on river process and form *Rivers and Landscape* Geoffrey E. Petts, 1985 There are two main themes to this book Firstly that river systems represent the integration and end product of all the processes operating within the drainage basin environment And secondly that rivers are sensitive to the most subtle changes particularly those induced by people In explaining the properties and dynamics of river systems the authors focus on new approaches ideas and interpretations but these are presented for the most part in a qualitative way Back cover **Rivers and landscape**

**features of river action** M J. SANDS, 1967 **Disconnected Rivers** Ellen E. Wohl, 2004-01-01 Ellen Wohl offers a survey of the history present condition of river systems across the US After describing the biological chemical physical aspects of the functioning of rivers she discusses the changes as the result of development federal management examines rehabilitation projects

**Geomorphic Analysis of River Systems** Kirstie A. Fryirs, Gary J. Brierley, 2012-09-26 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology Reading the landscape entails making sense of what a riverscape looks like how it works how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes These place based field analyses are framed within their topographic climatic and environmental context Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character behaviour and evolution including responses to human disturbance This book has been constructed as an introductory text on river landscapes providing a bridge and or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere Key principles outlined in the book emphasise the importance of complexity contingency and emergence in interpreting the character behaviour and evolution of any given system The target audience is second and third year undergraduate students in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary s research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at [www.wiley.com/go/fryirs\\_riversystems](http://www.wiley.com/go/fryirs_riversystems) *Room for the River*, 2017 The aim of the Room for the River Programme was to provide more space for the major rivers in the Netherlands as a way of managing the higher water levels in the delta area In over 30 locations measures were devised and

implemented to allow the rivers to flood safely Landscape architects and engineers worked together to design these measures in such a way that they also improved the quality of the landscape This richly illustrated book showcases the results of all the projects while the background and commentary texts illuminate this exemplary and impressive method of how the Dutch deal with climate change and landscape development

**Siuslaw National Forest (N.F.), Five Rivers Landscape Management Project**, 2001 *Thinking Big* Joan O'Callaghan, 2012 Exploring relationships between landscape characteristics and rivers is an emerging field of study bolstered by the proliferation of satellite data advances in statistical analysis and increased emphasis on large scale monitoring Climate patterns and landscape features such as road networks underlying geology and human developments determine the characteristics of the rivers flowing through them A multiagency team of scientists developed novel modeling methods to link these landscape features to instream habitat and to abundance of coho salmon in Oregon coastal streams This is the first comprehensive analysis of landscape scale data collected as part of the states Oregon Plan for Salmon and Watersheds The research team found that watershed characteristics and human activities far from the rivers edge influence the distribution and habitats of coho salmon Although large scale landscape characteristics can predict stream reaches that might support greater numbers of coho salmon smaller scale features and random chance also play a role in whether coho spawn in a particular stream and in a particular year The team developed new models that successfully predicted the distribution of instream habitat features Volume of instream wood and pool frequency were the features most influenced by human activities Studying these relationships can help guide large scale monitoring and management of aquatic resources

**Amazonia: Landscape and Species Evolution** Carina Hoorn, Frank Wesselingh, 2011-09-26 The book focuses on geological history as the critical factor in determining the present biodiversity and landscapes of Amazonia The different driving mechanisms for landscape evolution are explored by reviewing the history of the Amazonian Craton the associated sedimentary basins and the role of mountain uplift and climate change This book provides an insight into the Meso and Cenozoic record of Amazonia that was characterized by fluvial and long lived lake systems and a highly diverse flora and fauna This fauna includes giants such as the ca 12 m long caiman *Purussaurus* but also a varied fish fauna and fragile molluscs whilst fossil pollen and spores form relics of ancestral swamps and rainforests Finally a review the molecular datasets of the modern Amazonian rainforest and aquatic ecosystem discussing the possible relations between the origin of Amazonian species diversity and the palaeogeographic palaeoclimatic and palaeoenvironmental evolution of northern South America The multidisciplinary approach in evaluating the history of Amazonia has resulted in a comprehensive volume that provides novel insights into the evolution of this region

*Riparian Landscapes* George Patrick Malanson,1993-05-27 Riparian Landscapes examines the ecological systems of streamside and floodplain areas from the perspective of landscape ecology The specific spatial pattern of riparian vegetation is seen as a result of and a control on the ecological geomorphological and hydrological processes that operate along rivers Riparian structures are controlled by the spatial dynamics of channels flooding and soil moisture These dynamics are part of integrated cascades of water sediment nutrients and carbon to which animal and plant species respond in ways that illuminate community structure and competition The role of the riparian zone in controlling species distribution and abundance is discussed Intelligent management of these valuable ecological resources is highlighted The potential for linking hydrological geomorphological and ecological simulation models is also explored This book will be of interest to graduate and professional research workers in environmental science ecology and physical geography

**Waterways and the Cultural Landscape** Francesco Vallerani,Francesco Visentin,2017-09-11 Water control and management have been fundamental to the building of human civilisation In Europe the regulation of major rivers the digging of canals and the wetland reclamation schemes from the sixteenth to nineteenth centuries generated new typologies of waterscapes with significant implications for the people who resided within them This book explores the role of waterways as a form of heritage culture and sense of place and the potential of this to underpin the development of cultural tourism With a multidisciplinary approach across the social sciences and humanities chapters explore how the control and management of water flows are among some of the most significant human activities to transform the natural environment Based upon a wealth and breadth of European case studies the book uncovers the complex relationships we have with waterways the ways that they have been represented over recent centuries and the ways in which they continue to be redefined in different cultural contexts Contributions recognise not only valuable assets of hydrology that are at the core of landscape management but also more intangible aspects that matter to people such as their familiarity affecting what is understood as the fluvial sense of place This highly original collection will be of interest to those working in cultural tourism
