**Transposable Elements** Esra Galun, 2013-04-17 OY PONEOYLI TOIA YTA IIOAAOI OKOEOJII Many fail to grasp what they have seen and cannot judge what they have learned ErKYPEOYLI OYL1E MA ONTEE ITINOEKOYIT although they tell themselves they know EQYTOJII L1E L10KEOYLI Heraclitus of Ephesus 500 BC everyone that is not speckled and C T v N T ji N tuN spotted among the goats and brown among the sheep that shall be counted N N n c w c m stolen with me Genesis Chapter 30 From Heraclitus of Ephesus and later philosophers we can deduce that observation of natural phenomena even when keen and accurate will not result in meaningful knowledge unless combined with analysis of the mind just as analysis of the mind without acquaintance with natural phenomena will not suffice to grasp the perceivable world Only familiarity with phenomena combined with mental analysis will lead to additional knowledge The citation from Genesis Chapter 30 is part of an unusual story It tells how Jacob received as payment for his service to Laban the bulk of Laban s herds By agreement Jacob was to receive only the newborn speckled and spotted goats and the newborn brown sheep that differed completely from their parents Did Jacob know that there was instability transposable elements in the pigmentation of Laban s herd It is reasonable to assume that Jacob combined his keen observation with analysis of his mind in order to predict the outcome most of the newborns were indeed speckled spotted or brown

**Autophagy in plants and algae** Diane C Bassham, Jose L Crespo, 2015-05-15 Autophagy also known as macroautophagy is an evolutionarily conserved process by which cytoplasmic components are nonselectively enclosed within a double membrane vesicle known as the autophagosome and delivered to the vacuole for degradation of toxic components and recycling of needed nutrients This catabolic process is required for the adequate adaptation and response of the cell and correspondingly the whole organism to different types of stress including nutrient starvation or oxidative damage Autophagy has been extensively investigated in yeasts and mammals but the identification of autophagy related ATG genes in plant and algal genomes together with the characterization of autophagy deficient mutants in plants have revealed that this process is structurally and functionally conserved in photosynthetic eukaryotes Recent studies have demonstrated that autophagy is active at a basal level under normal growth in plants and is upregulated during senescence and in response to nutrient limitation oxidative stress salt and drought conditions and pathogen attack Autophagy was initially considered as a non selective pathway but numerous observations mainly obtained in yeasts revealed that autophagy can also selectively eliminate specific proteins protein complexes and organelles Interestingly several types of selective autophagy appear to be also conserved in plants and the degradation of protein aggregates through specific adaptors or the delivery of chloroplast material to the vacuole via autophagy has been reported This research topic aims to gather recent progress on different aspects of autophagy in plants and algae We welcome all types of articles including original research methods opinions and reviews that provide new insights about the autophagy process and its regulation

Natural Resistance Mechanisms of Plants to Viruses Gad Loebenstein,John Peter Carr,2007-05-26 Over the course of evolution most plants have acquired the ability to defend themselves against most groups of pathogens including the viruses Many antiviral resistance phenomena have been known and studied for decades but until recently understanding of their underlying mechanisms has lagged behind These phenomena include resistance to infection resistance to virus translocation through the plant recovery from infection and genetically defined resistance together with the associated phenomena of the local lesion response and induced or acquired resistance The identification and cloning of plant resistance genes characterization of downstream signaling components and especially the explosion of data regarding gene silencing mechanisms has led to rapid progress in the investigation of natural resistance phenomena Meanwhile in plant virology there has been remarkable progress in the arenas of replication movement proteins and plasmodesmatal gating and in the discovery of gene silencing suppressors Therefore it seemed timely and appropriate to link older but still important data on the well known classical resistance phenomena with the new information that has emerged during the last decade or so We hope that this book will inspire further research in this area as resistance presents the most economical and environmentally sound approach to control plant virus diseases Future technologies that emerge from this research might include an improved ability to introduce resistance genes into virus susceptible agronomically important cultivars to improve current pathogen derived resistance strategies using our new knowledge of small interfering and microRNAs or to develop targeted chemical treatments

**Molecular Plant-Microbe Interactions** Kamal Bouarab,Normand Brisson,Fouad Daayf,2009-10-12 This book divided into 13 chapters explores recent discoveries in the area of molecular plant microbe interactions It focuses mainly on the mechanisms controlling plant disease resistance and the cross talk among the signalling pathways involved and the strategies used by fungi and viruses to

suppress these defences Two chapters deal with the role of symbionts such as the symbiotic actinobacteria and vesicular arbuscular mycorrhizal fungi during their interactions with plants

**Microbial Plant Pathogens** Perumal Narayanasamy, 2017-02-06 Healthy seeds and propagules are the basic requirement for producing good grains fruits and vegetables needed for human survival and perpetuation Dispersal of microbial plant pathogens via seeds and propagules has assumed more importance than other modes of dispersal as infected seeds and propagules have the potential to become the primary sources of carrying pathogen inoculum for subsequent crops Several diseases transmitted through seeds and propagules have been shown to have the potential to damage economies as a result of huge quantitative and qualitative losses in numerous crops Hence it is essential to rapidly detect identify and differentiate the microbial plant pathogens present in seeds and propagules precisely and reliably using sensitive techniques Microbial Plant Pathogens Detection and Management in Seeds and Propagules provides a comprehensive resource on seed borne and propagule borne pathogens Information on the biology of microbial pathogens including genetic diversity infection process and survival mechanisms of pathogens and epidemiology of diseases caused by them are discussed critically and in detail to highlight weak links in the life cycles of the pathogens Development of effective disease management systems based on the principles of exclusion and eradication of pathogens and immunization of crop plants to enhance the levels of resistance of cultivars to diseases has been effective to keep the pathogens at bay The need for production of disease free seeds propagules has been emphasized to prevent the carryover of the inoculum to the next crop or introduction of the pathogens to other locations Effectiveness of adopting simple cultural practices and development of cultivars resistant to diseases through traditional breeding methods or biotechnological approach have resulted in reducing the pathogen inoculum and disease incidence Although application of different chemicals may reduce the disease incidence effectively biological management of crop diseases employing potential biological control agents have to be preferred to preserve the agroecosystems Greater efforts have to be made to integrate compatible strategies to enhance the effectiveness of diseases management systems Protocols appended at the end of relevant chapters form a unique feature of this book to enable the researchers to fine tune their projects This 2 volume set provides comprehensive and updated information about the economically important groups of microbial plant pathogens carried by seed and propagules Graduate students researchers and teachers of plant pathology plant protection microbiology plant breeding and genetics agriculture and horticulture as well as certification and quarantine personnel will find the information presented in this book useful
