Transport Management Systems and Records Leslie Robinson, 1971      Intelligent Road Transport Systems Yunpeng WANG, Xinping YAN, Guangquan LU, Chaozhong WU, 2022-05-17 In recent years the application of intelligent transportation systems ITS has steadily expanded and has become a hot spot of common interest to universities scientific research institutes enterprises and institutions in the transportation field ITS is the product of the deep integration of modern high tech in the transportation industry and its development has accompanied that of modern high tech ITS is now also becoming part of the Internet of Things IoT and is expected to contribute significantly to making our cities smarter and connecting with other infrastructure Although there are many monographs and textbooks on intelligent transportation with the advancement of technology and changes in demand the key technologies of ITS are also rapidly changing This book chiefly focuses on the main technologies of ITS examining them from four perspectives sense perception and management of traffic information chapters 2 3 transmission interaction of traffic information chapter 4 prediction prediction of traffic states chapter 6 and application intelligent transportation applications chapters 6 through 10 Given its scope the book can be used as a textbook for undergraduates or graduates as well as a reference book for research institutes and enterprises This book emphasizes the use of basis traffic engineering principles and state of art methodologies to develop functional designs It largely reflects the authors own experience in adapting these methodologies to ITS design For example the book addresses various forms of data collection models used to predict and evaluate traffic states comprehensive description in connected vehicles applications for users and traffic managers etc The knowledge gained here will allow designers to estimate the performance differences among alternatives and gauge their potential benefits for functional design purposes To gain the most from the book readers should be somewhat familiar with the field of traffic engineering and interested in ITS      Transportation Systems Sarbjit Singh, Alberto Martinetti, Arnab Majumdar, Leo A. M. van Dongen, 2019-08-20 This book explores the application of breakthrough technologies to improve transportation performance Transportation systems represent the blood vessels of a society in which people and goods travel They also influence people s lives and affect the liveability and sustainability of our cities The book shows how emergent technologies are able to monitor the condition of the structure in real time in order to schedule the right moment for maintenance activities an so reduce the disturbance to users This book is a valuable resource for those involved in research and development in this field Part I discusses the context of transportation systems highlighting the major issues and challenges the importance of understating human factors that could affect the maintenance operations and the main goals in terms of safety standards Part II focuses on process oriented innovations in transportation systems this section stresses the importance of including design parameters in the planning offering a comparison between risk based and condition based maintenance and lastly showing applications of emergent technologies Part III goes on to reflect on the technical oriented innovations discussing the importance of studying the physical phenomena that are behind

transportation system failures and problems It then introduces the general trend of collecting and analyzing big data using real world cases to evaluate the positive and negative aspects of adopting extensive smart sensors for gathering information on the health of the assets The last part IV explores cultural and behavioural changes and new knowledge management methods proposing novel forms of maintenance and vocational training and introduces the need for radical new visions in transportation for managing unexpected events The continuous evolution of maintenance fields suggests that this compendium of state of the art applications will not be the only one the authors are planning a collection of cutting edge examples of transportation systems that can assist researchers and practitioners as well as students in the process of understanding the complex and multidisciplinary environment of maintenance engineering applied to the transport sector
