## Robert Stephenson:

**The Planet and Samson Locomotives** Anthony Dawson, 2023-08-17 Robert Stephenson's Planet class locomotive was the first true design of mainline express passenger locomotive. Delivered less than a year after Rocket, it was one of the most successful early locomotive designs. Planet set the mold for British locomotive design for more than the next century, featuring a multi-tubular boiler, inside-cylinder crank axle, and the first use of proper frames. The Planet class and its 0-4-0 Samson derivative found use across Britain, with examples being supplied to railways in London and Glasgow. The Planet class proved popular in Europe too, with examples being first exported and then built in France. Two were exported to Austria, and the first locomotive to steam in Russia was based on the design. Planet and Samson also crossed the Atlantic, with more examples being built in the United States than in Europe. A working replica of the revolutionary design was built in Manchester in 1992, the first mainline express passenger steam locomotive to be built in Britain since the 1960s. This book outlines the technical design of the Planet and Samson locomotive and charts the careers of the class members at home and abroad.

From ancient times to the present day, the major inventors, discoverers, and entrepreneurs from around the world are profiled, and their contribution to society explained and assessed.

**Structure** The Dictionary presents descriptive and analytical biographies of its subjects in alphabetical order for ease of reference. Each entry provides detailed information on the individual's life, work, and relevance to their particular field. In the first part of the entry, the information will include the dates and places of the subject's birth and death, together with their nationality and their field of activity. In the main body of the entry, there follows an account of their principal achievements and their significance in the history of technology, along with full details of appointments and honours. Finally, an annotated bibliography will direct the reader to the subject's principal writings and publications, and to the most important secondary works which the reader can consult for further information.

**Special Features** The first work in existence to examine technologists in detail. Contains over 1,500 entries giving detailed information. Extensive cross-references enable the reader to compare subjects and build up a picture of technological advance. Figures drawn from fields such as Aeronautics, Telecommunications, Architecture, Photography, and Textiles.

**Rail, Steam, and Speed** Christopher McGowan, 2004-11-10 From October 6 through 14 1829 in a small village just outside Liverpool England ten thousand spectators gathered to witness one of the most remarkable events of the Industrial Age a battle among locomotives that became known as the Rainhill Trials Five machines were entered in the competition the horse powered Cycloped attained a top speed of only five miles per hour while Perseverance which looked like a giant iron bottle standing upright atop four wagon wheels creaked along at a walking pace But the three way race between Robert Stephenson's Rocket Timothy Harworth's Sans Pareil and the crowd favorite John Braithwaite and John Ericsson's Novelty astonished the gathered crowds The unfamiliar clank of machinery huge billows of steam and unprecedented speeds of thirty miles per hour thrilled the crowds during the trials carnival like atmosphere The Rocket won the competition though it had been claimed that the machine was not the superior locomotive Rail Steam and Speed explains why and offers an absorbing account of the trials people and science that gave birth to steam locomotion The purpose of the trials had been to find a locomotive that could maintain a speed of ten miles per hour for a round trip totaling thirty five miles the distance separating Liverpool and Manchester which were soon to be linked by the world's first passenger railway But what was achieved during those nine days became a benchmark of the Industrial Revolution Bringing the excitement of this great drama to life Christopher McGowan introduces us to such pioneers as George Stephenson who started as a colliery boy and finished as the father of the railways John Ericsson a Swedish Army officer who invented a new kind of locomotive in England but spent most of his life in the United States where he built the Monitor for the Union Navy and Richard Trevithick whose eleven year adventure in South America included winning and losing several fortunes deserting Bolivar's army and escaping the jaws of a crocodile He encountered George Stephenson's son Robert in a Colombian hotel in one of the most bizarre meetings of the age But the real stars are the locomotives themselves McGowan shows how locomotives work and how they were developed from the gargantuan beam engines condensing low pressure steam inside enormous cylinders to the small high pressure driven engines of the maverick miner Trevithick He adapted the engines to power road carriages but atrocious roads led him to build an engine that could run on rails And so was born the world's first steam locomotive and modern transportation
