and inhabits Scandinavia and Russia as well. Of the seven subspecies of moose, four of them live in North America where 1 million moose live. They inhabit the northern deciduous and mixed coniferous forests in the east, the aspen parklands of the midwest, the vast boreal forests that span the continent, the northern taiga, and up into the southern fringes of the tundra. Moose have been re-introduced to Wisconsin, Minnesota, and New Hampshire and were introduced to Newfoundland as a food source. The name moose is derived from the Algonquian native word *mooswa*, which means animal that strips bark from trees or twig-eater, and first appeared in the English language in the 1600s. Moose can run up to 35 miles an hour, swim effortlessly for long periods of time, dive as deep as 18 feet, and stay submerged for as long as a minute. Their considerable weight and awesome antlers also make them a spectacle to behold. Despite their physical grandeur, moose face challenges from encroaching human activity and a warming climate. More southerly species are moving ever northward where the animals seek out the cooler climates that they need to thrive.
