Fruits and Vegetables FV are of primary portance as the key source of essential components in an adequate and balanced
human diet FV have supported largely the daily food requirement of mankind since ages and even before man learned to
grow cereal crops systematically Over the years growing FV has been the mainstay of rural economy and has emerged as an
indispensable part of agriculture world over offering farmers a wide range of crops in varied topography and climate In
certain parts of the world FV are the major dietary staple Apart from being a rich source of vitamins and minerals this sector
also contributes significantly in economy of the region or the nation The increased income from per unit area of FV is far
ahead and can not be compared with that of cereal crops A recent survey by the Economist revealed that the world
population has creased by 90 % in the past 40 years while food production has increased only by 25 % per head With an
additional 1 5 billion mouth to feed by 2020 farmers worldwide have to produce 39 % more Looking at the load of the future
food requirement the global increased production of FV during last few years has absorbed the additional food requirement
and accordingly the eating habits are also changing and shifting wards more consumption of these commodities worldwide
