Back in the Spaceship Again Karen Sands-O'Connor, Marietta Frank, 1999-08-30 Much literature for children appears in the form of series in which familiar characters appear in book after book In the late nineteenth and early twentieth century authors began to write science fiction series for children These early series generally had plots that revolved around inventions developed by the protagonist But it was the development and use of rocket and atomic science during World War II that paved the way for interesting and exciting new themes conflicts and plots While much has been written about the early juvenile science fiction series particularly the Tom Swift books comparatively little has been written about children's science fiction series published since 1945 This book provides a broad

overview of this previously neglected topic The volume offers a critical look at the history themes characters settings and construction of post 1945 juvenile science fiction series including the A I Gang the Animorphs Commander Toad Danny Dunn Dragonfall Five the Magic School Bus and Space Cat The book begins with an introductory history of juvenile science fiction since 1945 with chapters then devoted to particular topics Some of these topics include the role of aliens and animals attitudes toward humor the absence and presence of science and the characterization of women A special feature is an appendix listing the various series In addition the volume provides extensive bibliographical information Missiles, Rockets and Satellites: Earth satellites and space exploration United States. Department of the Army,1958 *Hypothetical Spacecraft and Interstellar Travel* Ezekiel Nygren,2015-02-28 Hypothetical Spacecraft and Interstellar Travel collects information about the latest and greatest hypothetical spacecraft Space Travel - the Reality E R Niles,2007-11-10 Although space travel has been a topic of great interest to many few have an understanding of the ultimate limits that will determine its possibilities One thing is certain No matter the advancement in technology whether earthling or extraterrestrial energy requirements will determine ultimate success in space travel True technology will play a part Among other things it will determine the kinds of fuels that will be useable in deep space travel and that will in the end determine its successes Are we ultimately going to be able to travel outside our own solar system to reach other worlds Have extraterrestrials really visited us in the past These are the questions addressed in this book It is written for the layman and does not require a technical background *Elementary School Aerospace Activities, a Resource for Teachers* ,1977

Office of Scientific Research,1958 Special Relativity and Motions Faster than Light Moses Fayngold,2008-09-08 While the theory of special relativity is often associated with the idea of traveling faster than light this book shows that in all these cases subtle forces of nature conspire to prevent these motions being harnessed to send signals faster than the speed of light The author tackles these topics both conceptually with minimal or no mathematics and quantitatively making use of numerous illustrations to clarify the discussion The result is a joy to read for both scientists familiar with the subject and laypeople wishing to understand something of special relativity *Future Spacecraft Propulsion Systems* Claudio Bruno,Paul A. Czysz,2009-03-20 This third edition of Future Spacecraft Propulsion Systems and Integration Enabling Technologies for Space Exploration has been updated and expanded The major addition addresses the multi disciplinary integration between the spectrum of hypersonic vehicles to reach Earth orbit and that of their propulsion systems A best practice sizing approach is presented to define the solution spaces and facilitate the correct design of these integrated flight vehicles to mission This pragmatic approach is the essential capability sought after by design teams technology forecasters and strategic planners alike and includes lesson learned and space launchers as examples from the past Among novel systems the chapter on future combined engines

includes now description and performance of pulsed detonation engines All aspects of space flight discussed in the first two editions have been updated and augmented to account for the many changes in technology policy and space objectives following the demise of the US Shuttle and the appearance of private space companies Accordingly the chapters dealing with near Earth interplanetary galactic and future breakthrough propulsion have been expanded to include new applications such as nuclear magnetic pulses recent concept powered by inertial fusion and new issues as for instance space radiation a major obstacle to space exploration and commercialization in the years to come This book can be useful to graduate students and teachers as well as industrial organizations and planners

Outer Space Propulsion by Nuclear Energy United States. Congress. Joint Committee on Atomic Energy,1958

Project Deep Space H. Preston,2000-12 The year was 2115 For more than 150 years governments and private firms had been flying into space but they still had not reached a point at which they had established a viable space travel industry The growing public opinion was that they were spending too much money wasting too much of Earth's scarce resources and were no nearer to the routine hauling of passengers and freight than they were 150 years ago The idea of space travel beyond our planetary system had faded to a level of wild fantasy While an innovative spacecraft manufacturing company and an aggressive airline firm brought space travel to the level of a viable industry with the introduction of a propulsion system without the need to carry a fuel load The new ships were powered by electrical energy But they had a serious limitation there had to be a power station at the destination With bases on planets and satellites further and further away they gradually established a system to exploit the resources of other planets and asteroids mining and discovering new minerals This story is about the results of a discovery on one of those planets that enabled the development of a propulsion system that revolutionized space travel allowing journeys beyond the solar system
