*Planetary Geology* Angelo Pio Rossi, Stephan van Gasselt, 2017-11-28 This book provides an up to date interdisciplinary geoscience focused overview of solid solar system bodies and their evolution based on the comparative description of processes acting on them Planetary research today is a strongly multidisciplinary endeavor with efforts coming from engineering and natural sciences Key focal areas of study are the solid surfaces found in our Solar System Some have a direct interaction with the interplanetary medium and others have dynamic atmospheres In any of those cases the geological records of those surfaces and sub surfaces are key to understanding the Solar System as a whole its evolution and the planetary perspective of our own planet This book has a modular structure and is divided into 4 sections comprising 15 chapters in total Each section builds upon the previous one but is also self standing The sections are Methods and tools Processes and Sources Integration and Geological Syntheses Frontiers The latter covers the far reaching broad topics of exobiology early life extreme environments and planetary resources all areas where major advancements are expected in the forthcoming decades and both key to human exploration of the Solar System The target readership includes advanced undergraduate students in geoscience related topics with no specific planetary science knowledge undergraduates in other natural science domains e.g physics

astronomy biology or chemistry graduates in engineering and space systems design who want to complement their knowledge in planetary science The authors backgrounds span a broad range of topics and disciplines rooted in Earth geoscience their expertise covers remote sensing and cartography field mapping impact cratering volcanology and tectonics sedimentology and stratigraphy exobiology and life in extreme environments planetary resources and mining Several generations of planetary scientists are cooperating to provide a modern view on a discipline developed from Earth during and through Space exploration

**Experiments in Reduced Gravity** Nikolaus Kuhn, 2014-09-06  
 Experiments in Reduced Gravity Sediment Settling on Mars is the first book to be published that reflects experiments conducted on Martian geomorphology in reduced gravity This brief yet important book on sediment experiments assesses the theoretical and empirical foundation of the models used to analyze the increasing information we have on the past geography on Mars The book also evaluates the need to develop new methods for analyzing new information by providing a conceptual outline and a case study on how experiments can be used to test current theoretical considerations The conceptual approach to identifying the need for and role of experiments will be of interest to planetary scientists and geoscientists not necessarily involved with Mars but those using experiments in their research who can apply the book's concepts Includes figures diagrams illustrations and photographs to vividly explore experiments and outcomes in reduced gravity Provides an outline of planned experiments and questions related to Martian geomorphology Features results from the MarsSedEx 1 Experiment in 2012

**Making Time on Mars** Zara Mirmalek, 2020-04-07  
 An examination of how the daily work of NASA's Mars Exploration Rovers was organized across three sites on two planets using local Mars time In 2004 mission scientists and engineers working with NASA's Mars Exploration Rovers MER remotely operated two robots at different sites on Mars for ninety consecutive days An unusual feature of this successful mission was that it operated on Mars time the daily work was organized across three sites on two planets according to two Martian time zones In Making Time on Mars Zara Mirmalek shows that this involved more than a resetting of wristwatches the team's struggle to synchronize with Mars time involved technological and communication breakdowns informal workarounds and extra work to support the technology that was intended to support people Her account of how NASA created an entirely new temporality for the MER mission offers insights about the assumptions behind the organizational relationship between clock time and work Mirmalek herself a member of the mission team offers an insider's view of the MER workplace and community She describes the discord among MER's multiple temporalities and examines issues of professional identity that helped shape the experience of working according to Mars time Considering time and work relationships through a multidisciplinary lens Mirmalek shows how contemporary and historical human technology relationships inform assumptions about the unalterability of clock time She argues that the organizational connection between clock time and work although still operational is outdated
