The Ocean's Role in Global Change National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Ocean Studies Board, 1994-02-01 What role does the ocean play in global climate change Although not fully understood there is general agreement that it is significant Therefore the scientific community has initiated large scale research programs based on studies of the ocean and its relation to global climate and climate related processes This volume provides brief summaries and reports on the progress of the major oceanographic research programs It looks at both programs that study processes that occur over periods ranging from days to hundreds of years the contemporary system and those that seek to understand long term variations ranging from thousands to millions of years the geological perspective

Scientific Satellite and Moon-Based Earth Observation for Global Change Huadong Guo, Wenxue Fu, Guang Liu, 2019-06-27 Global change involves complex and far reaching variations in the Earth's systems and satellite observations have been widely used in global change studies Over the past five decades Earth observation has developed into a comprehensive system that can conduct dynamic monitoring of the land the oceans and the atmosphere at the local regional and even global scale At the same time although a large number of Earth observation satellites have been launched very few of them are used in global change studies The lack of scientific satellite programs greatly hinders research on global change This book proposes using a series of global change scientific satellites to establish a scientific observation grid for global environmental change monitoring from space and offers the first comprehensive review of lunar based Earth observation

These scientific satellites could provide not only basic datasets but also scientific support in facilitating advances in international global change research

Global Change and Baltic Coastal Zones Gerald Schernewski, Jacobus Hofstede, Thomas Neumann, 2011-03-31 Climate change and ongoing transformation processes in economy and agriculture will have strong and multiple impacts in the Baltic region In particular coastal zones face increasing hazards e g due to sea level rise or changes in riverine nutrient loads and eutrophication These changes also offer a wide range of new opportunities in the Baltic Region Adaptation measures are needed but require a thorough and spatially differentiated understanding of underlying ecological economic and social processes Sixteen contributions by authors from eight countries give a comprehensive overview of these changes their consequences and practical challenges with focus on coastal zones Besides risks the chances and opportunities of changes for the region are addressed and adaptation examples and strategies are given The practitioners perspective and their demands are integrated in the various contributions

oceans regions **The U.S. Global Change Research Program** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Global Change, 1990-02-01 The Urban Caribbean in an Era of Global Change Robert B. Potter, 2017-03-02 Based on the author's first hand field research this book addresses the twin processes of urbanization and globalization as they affect the contemporary Caribbean region One of the key aims of the book is to focus attention on the fact that contrary to popular perceptions the Caribbean is highly urbanized Indeed statistics show that the region is more highly urbanized than the world taken as a whole In addition the fact that the Caribbean region has always been affected by processes of globalization in respect of its economy polity and society is central to the text The chapters cover pressing topics such as urban change and the evolution of mini metropolitan regions the importance of the mercantile and plantopolis frameworks tourism post modernity and the urban nexus economic change and the dual processes of global convergence and divergence and the nature of the relationships existing between the state the informal sector housing and environmental conditions In reality it is shown that the development of tourism and enclave manufacturing is leading to new forms of urban concentration and not spatial dispersal
