Seabirds Of Hawaii Natural History And Conservation:

Seabirds of Hawaii Craig S. Harrison, 2019-05-15 Hawaii is known throughout the world for its uniquely hospitable climate and people. Because of its geographical isolation and tropical subtropical location, it harbors numerous animals that are unknown elsewhere in the United States. Unfortunately, Hawaii is special in another respect: it is the endangered species capital of the world. Many of its birds are in jeopardy of extinction. This book, the first to portray a tropical seabird community, treats the 22 species of seabirds of the Hawaiian archipelago from a conservationist point of view. Craig S. Harrison first establishes the setting, describing Hawaii's birth from undersea volcanoes, its marine biology, and the effects of Polynesians and Westerners on its pristine island ecosystem. He summarizes current knowledge of albatrosses, shearwaters, petrels, frigatebirds, boobies, tropicbirds, terns, and noddies, explaining their similarities and differences with respect to nesting, food habits, migration at sea, and adaptation to a tropical environment. Regional Seabird Conservation Plan, 2005 Hawaiian Natural History, Ecology, and Evolution Alan C. Ziegler, 2002-09-30 Not since William A. Bryan's 1915 landmark compendium *Hawaiian Natural History* has there been a single volume work that offers such extensive coverage of this complex but fascinating subject. Illustrated with more than two dozen color plates and a hundred photographs and line drawings, *Hawaiian Natural History: Ecology and Evolution* updates both the earlier publication and subsequent works by compiling and synthesizing in a uniform and accessible fashion the widely scattered information now available. Readers can trace the natural history of the Hawaiian Archipelago through the book's twenty-eight chapters or focus on specific topics such as island formation by plate tectonics, plant and animal evolution, flightless birds and their fossil sites, Polynesian migrational history and ecology, the effects of humans and exotic animals on the environment, current conservation efforts, and the contributions of the many naturalists who visited the islands over the centuries and the stories behind their discoveries. An extensive annotated bibliography and a list of audio-visual materials will help readers locate additional sources of information.

Conservation of Marine Birds Lindsay Young, Eric VanderWerf, 2022-09-27 *Conservation of Marine Birds* is the first book to outline and synthesize the myriad of threats faced by one of the most imperiled groups of birds on earth. With more than half of all 346 seabird species worldwide experiencing population declines and 29% of species recognized as globally threatened by the International Union for Conservation of Nature, the timing to determine solutions to threats could not be more urgent. Written by a diverse team of international experts on marine birds, this book explores the environmental and biogeographical factors that influence seabird conservation and provides concrete recommendations for mounting climate change issues. This book will be an important resource for researchers and conservationists as well as ecologists and students who want to understand seabirds, the threats they are facing, and tactics to help conserve and protect them. Outlines both threats and solutions in the marine and terrestrial realm. Synthesizes information to provide a comprehensive strategy moving forward, especially considering climate change. Created by a team of experts with the latest and most comprehensive

knowledge of seabird conservation Finding Home, a Hawaiian Petrel's Journey Caren Loebel-Fried, 2024-09-30 Eleven year old Makani Kealoha Morton adores ua u Hawaiian petrels She grew up marveling at the seabird s magical evening sky dance and murmurs from their underground burrows Living over the ocean gliding thousands of miles on the wind to wherever food was abundant they returned yearly to their burrows in the Hawaiian Islands Over thousands of years their guano helped to make Hawai i fertile and habitable for humans Yet humans brought predators and environmental changes that caused ua u numbers to plummet to near extinction Makani s biologist mom and her team devise a plan to save the seabirds Ten ua u chicks are raised within a protected place The chicks leave for the sea one by one but Makani s favorite is very late to fledge Makani worries Will this young petrel survive at sea Will she return to the refuge to raise her own young Will the plan to save the ua u work By the story s end Makani finds her own way to make a difference for the seabirds she loves so dearly Based on the true story of ua u and the people working to save them Finding Home a Hawaiian Petrel s Journey is filled with Caren Loebel Fried s colorful block prints dynamic drawings and maps Following the story a back section provides scientific facts on the habitat and lifestyle of ua u and their connection to Hawaiian culture and history The book s middle grade content includes place based learning that incorporates natural science wildlife conservation biology literature and art Appealing to all ages this hopeful empowering story brings awareness to the threats humans have brought upon seabirds and inspires us to find ways we can help them survive and thrive **Field Guide to the Sāmoan**

Eye of the Albatross Carl Safina, 2003-04-01 One of the most delightful natural history studies in decades The Boston Globe Eye of the Albatross takes us soaring to locales where whales sea turtles penguins and shearwaters flourish in their own quotidian rhythms Carl Safina s guide and inspiration is an albatross he calls Amelia whose life and far flung flights he describes in fascinating detail Interwoven with recollections of whalers and famous explorers Eye of the Albatross probes the unmistakable environmental impact of the encounters between man and marine life Safina s perceptive and authoritative portrait results in a transforming ride to the ends of the Earth for the reader as well as an eye opening look at the health of our oceans Lost Land of the Dodo Anthony Cheke, Julian P. Hume, 2009-01-01 The Mascarene islands in the southern Indian Ocean Mauritius Reunion and Rodrigues were once home to an extraordinary range of birds and reptiles Evolving on these isolated volcanic islands in the absence of mammalian predators or competitors the land was dominated by giant tortoises parrots skinks and geckos burrowing boas flightless rails the birds and tortoises were slaughtered indiscriminately

while introduced rats cats pigs and monkeys destroyed their eggs the once extensive forests logged and invasive introduced plants from all over the tropics devastated the ecosystem The now familiar icon of extinction the Dodo was gone from Mauritius within 50 years of human settlement and over the next 150 years many of the Mascarenes other native vertebrates followed suit The product of over 30 years research by Anthony Cheke *Lost Land of the Dodo* provides a comprehensive yet hugely enjoyable account of the story of the islands changing ecology interspersed with human stories the islands biogeographical anomalies and much else Many French publications old and new especially for Réunion are discussed and referenced in English for the first time The book is richly illustrated with maps and contemporary illustrations of the animals and their environment many of which have rarely been reprinted before Illustrated box texts look in detail at each extinct vertebrate species while Julian Hume's superb colour plates bring many of the extinct birds to life *Lost Land of the Dodo* provides the definitive account of this tragic yet remarkable fauna and is a must read for anyone interested in islands their ecology and the history of our relationship with the world around us

Biology of Marine Birds E. A. Schreiber, Joanna Burger, 2001-08-16 *Biology of Marine Birds* provides the only complete summary of information about marine birds ever published It analyzes their breeding biology ecology taxonomy evolution fossil history physiology energetics and conservation The book covers four orders of marine birds in detail and includes two summary chapters that address the biology of shorebirds and wading birds and their lives in the marine environment Summary tables give detailed information on various aspects of their life histories breeding biology physiology and energetics and demography It provides a guide to ornithologists and students for research projects

Hawai'i's White Tern Susan Scott, 2018-11-15 White Terns are native throughout the world's tropics and subtropics where they breed almost exclusively on remote islands that are free of predators like cats dogs rats and mongooses Historically this was also true in Hawai'i but in 1961 a pair of White Terns laid an egg and raised a chick near Hanauma Bay Since then their numbers in the city of Honolulu have steadily increased and in 2007 the White Tern also known by its Hawaiian name *Manu o K* was designated the official bird of the City and County of Honolulu Other native seabirds nest on Oahu and its nearby islands but the graceful White Tern is the only species known to lay its eggs in the city's nonnative trees on window ledges and on other man-made structures making Honolulu unique among world cities People who live in apartment buildings and work in office towers can watch parents brooding eggs and feeding chicks An energetic fishing bird the *Manu o K* can fly far from land in its search for fish and squid Sailors on traditional voyaging canoes keep a close eye on them as the sun starts to go down the birds head home effectively providing the bearing of nearby islands Today White Terns are a common sight in Honolulu from downtown parks to Nuuanu and Mānoa valleys to bustling Waikīkī and the photogenic birds are gaining in popularity as their range increases In bringing together data about White Terns from here and abroad marine biologist Susan Scott has crafted a reliable informative resource filled with remarkable photographs for anyone curious about *Manu o K* Honolulu's official bird
