Sealed Nickel Cadmium Batteries F. R. Cloke, Varta Batterie AG., 1982-01-01 *Battery Reference Book* Thomas P J Crompton, 2000-03-20 Crompton's Battery Reference Book has become the standard reference source for a wide range of professionals and students involved in designing manufacturing and specifying products and systems that use batteries This book is unique in providing extensive data on specific battery types manufacturers and suppliers as well as covering the theory an aspect of the book which makes an updated edition important for every professional's library The coverage of different types of battery is fully comprehensive ranging from minute button cells to large installations weighing several hundred tonnes Must have information and data on all classes of battery in an accessible form Essential reference for design engineers in automotive and aerospace applications telecommunications equipment household appliances etc Informs you of developments over the past five years

Nickel-cadmium Batteries E. Kantner, A. E. Lyall, R. C. Shair, 1962 This report covers the second phase of a Research and Development Program leading to improved long life reliable high watt hour per pound sealed nickel cadmium batteries Design considerations based on the battery operating requirements have been discussed Results of investigations to determine the optimum quantity of electrolyte to be added to a sealed cell for improved overcharge performance have been presented A number of separator materials have been tested at elevated temperatures to find one that would prolong the useful life of a sealed cell Studies were made to learn about the reactions occurring at the negative electrode in an attempt to improve the overcharge characteristics of sealed nickel cadmium cells Cycle test results and a failure analysis on three different types of sealed cells have been presented and discussed A test report and a prototype battery specification have also been included

Miniature Sealed Nickel-Cadmium Batteries Claude J. Menard, John R. Walsh, Kenneth C. Kohl, GOULD INC MENDOTA HEIGHTS MN GOULD LABS., 1973 The purpose of this program has been to design develop fabricate and test miniature high rate sealed nickel cadmium batteries of the button cell construction The battery types are BB 683 U 50mAh BB 684 U 100mAh BB 685 U 150mAh and BB 686 U 250mAh The program was carried out as follows design parameter study to select prototype models qualification tests on the prototype batteries in accordance with the specification SCL 6899A fabrication and delivery of 100 cells and 20 12 volt batteries of each type Within the cell dimension and weight limits imposed the selection of the prototype batteries included investigations on two basic design assemblies i e a 2 plate design and a 4 plate design The prototype design for the 50 mAh battery is the 2 plate construction i e one positive and one negative The other three types are of the 4 plate construction i e two positives and two negatives The four prototype designs met all the requirements dimensions weights electrical and other environmental tests The weights of the three 4 plate batteries 100 150 and 250 mAh sizes were 8.3 10.3 and 14.3 g compared to the requirements of 11.34 12.76 and 17.01 g maximum In general the minimum capacity requirements were easily exceeded Batteries of each type are on long life cycle test The batteries have passed the minimum 56 cycles that was required before the fabrication of the delivery

items The qualification test results show that the program was successfully accomplished Author Nickel-cadmium Battery Update, 1992 Nickel-cadmium Battery Application Engineering Handbook General Electric Company. Battery Products Section, General Electric Company. Battery Business Department, 1975 The first edition of the Nickel Cadmium Battery Application Engineering Handbook was published early in 1971 Since that time the technology of nickel cadmium sealed cells has been extended the new developments have increased the utility of these rechargeable batteries by extending their capabilities The information in this publication is devoted to these new extended capabilities In combination with the original handbook the supplement provides a ready reference for application design using the new extended capability batteries These newly developed batteries are fast charge batteries charge in one hour or less quick charge batteries continuous charge at the 3 to 4 hour rate high temperature batteries up to 65 C continuous operation standby power batteries years of continuous charge Each one of these new capability batteries is treated in depth in a separate section In addition a product section provides detailed application data for each of the General Electric extended capability cells Introduction page 1 1
