Reservoir Induced Earthquakes H.K. Gupta,1992-03-09 Since the publication of the first Dams and Earthquakes in 1976 the phenomenon of reservoir induced seismicity RIS is more widely understood There are now over 70 known cases of reservoir induced earthquakes These damaging earthquakes have occurred in China Kariba Zambia Greece Kremasta Koyna India California and elsewhere The December 10 1967 Koyna earthquake with a magnitude of 6.3 claimed over 200 lives injured 1500 and rendered thousands homeless Because of the ever increasing demand for dam construction for power generation irrigation and flood control it is necessary to understand how where and why induced earthquakes occur Recent research has demonstrated that when suitable physical measurements of rock properties are made a fairly accurate model of induced seismicity can be obtained It appears possible to mitigate the hazard of RIS through manipulation of reservoir levels The present volume is an updated and revised follow up to the 1976 book It presents an overview of the world wide distribution of RIS the salient aspects of RIS at specific reservoir sites where earthquakes of M 5 have occurred and where new results on RIS are reported and how they differ from the normal earthquake sequences An examination of the non occurrence of induced earthquakes in the vicinity of the Himalayan reservoirs and other related topics such as the size of the largest induced earthquake that could occur at a given reservoir site prediction of induced earthquakes and dam site investigations which should be completed during the planning and operation of the reservoirs are also included
