Filippov,Stanislav N. Gorb,2020-06-30 Basic laws of nature are rather simple but observed biological structures and their dynamic behaviors are unbelievably complicated This book is devoted to a study of this strange relationship by applying mathematical modeling to various structures and phenomena in biology such as surface patterns bioadhesion locomotion predator prey behavior seed dispersal etc and revealing a kind of self organization in these phenomena In spite of diversity of biological systems considered two main questions are 1 what does self organization in biology mean mathematically and 2 how one can apply this knowledge to generate new knowledge about behavior of particular biological system We believe that this kind of biomimetics in computer will lead to better understanding of biological phenomena and possibly towards development of technical implications based on our modeling
