Shapes On The Horizon:

Shapes on the Horizon Teddy Millington-Drake, John McEwen, 1997-12-31 **New Infinitary Mathematics** Petr Vopěnka, 2022-08-01 The dominant current of twentieth century mathematics which simultaneously explores and applies infinity albeit in bizarre ideal worlds relies on Cantor's classical theory of infinite sets Cantor's theory in turn relies on the problematic assumption of the existence of the set of all natural numbers the only justification for which a theological justification is usually concealed and pushed into the collective unconscious This book begins by surveying the theological background emergence and development of classical set theory The author warns us about the dangers implicit in the construction of set theory traceable in his own and other eminent mathematicians seminal works on the subject He then goes on to present an argument about the absurdity of the assumption of the existence of the set of all natural numbers However the author's contribution is not just a negation of current views and assumptions On the contrary the new infinitary mathematics that he proceeds to propose and develop is driven by a cautious effort to transcend the horizon bounding the ancient geometric world and pre set theoretical mathematics whilst allowing mathematics to correspond more closely to the natural real world surrounding us The final parts are devoted to a discussion of real numbers and to demonstrating how within the new infinitary mathematics calculus can be rehabilitated in its original form employing infinitesimals

Multimodality in the Built Environment Louise J. Ravelli, Robert J. McMurtrie, 2015-11-19 This book provides an extended exploration of the multimodal analysis of spatial three dimensional texts of the built environment culminating in a holistic approach termed Spatial Discourse Analysis SpDA Based on existing frameworks of multimodal analysis this book applies adapts and extends these frameworks to spatial texts The authors argue that choices in spatial design create meanings about what we perceive and how we can or should behave within spatial texts influence how we feel in and about those spaces and enable these texts to function as coherent wholes Importantly a spatial text once built is also a resource which is then used and an essential aspect of understanding these texts is to consider what users themselves contribute to the meaning potential of these texts The book takes the metafunctional approach familiar from Systemic Functional Linguistics SFL and foregrounds each metafunction in turn textual interpersonal experiential and logical in relation to the detailed analysis of a particular spatial text **Gravitational Waves** Michele Maggiore, 2008 The two volumes of Gravitational Waves provide a comprehensive and detailed account of the physics of gravitational waves Volume 2 discusses what can be learned from gravitational waves in astrophysics and in cosmology by systematizing a large body of theoretical developments that have taken place over the last decades
