Climate Change, Human Systems, and Policy - Volume II Antoaneta Yotova,2009-03-25 Climate Change Human Systems and Policy is a component of Encyclopedia of Natural Resources Policy and Management in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The Theme on Climate Change Human Systems and Policy presented in three volumes deals with the interaction between climate and human systems for policy development These volumes discuss History Status and Prediction of Global Climate Change Potential Large scale Effects of Global Warming Public Perceptions Toward Global Climate Change Effects of Potential Sea Level Rises Economics of Potential Climate Change Response Strategies for Stabilization of Atmospheric Composition Policy Framework and Systems Management of Global Climate Change These three volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs *The Economics of Climate Change* Nick Hanley,Anthony D Owen,2004-05-06 This impressive new collection couldn't come at a better time With global warming now becoming physically noticeable and the Kyoto treaty stalling in its efforts to get the developed world on board a look at the economic factors of global warming is very much welcome With contributions from distinguished authors and covering everything you need Sharing the Effort Matthew Paterson,Michael Grubb,1996 This report presents selected papers from a Royal Institute workshop on the differentiation within industrialized countries to limit greenhouse gas emissions together with an overview of the discussions The workshop brought together leading negotiators and analysts to explore whether and how emission commitments might be differentiated **Political Theory and Global Climate Action** Idil Boran,2018-10-03 From around the world cities and regions civil society networks and businesses nongovernmental organizations and institutions for research and learning and many others are taking action on climate change The role of these nonstate and substate actors is increasingly being recognized in the new facilitative climate regime Political theory to date has been surprisingly silent about the scale and prospects of these actions for low carbon climate resilient and sustainable transformations Idil Boran argues provocatively for the need for a widened scope of vision one that has a broader public life of climate action at its centre While acknowledging the role of the state and the multilateral process Boran maintains that social transformation is as deeply and more continuously influenced by the engagement of a wide range of actors below and above the state whose actions are often locally anchored and inescapably interwoven across borders Bringing concepts of the public sphere from political theory into contact with leading scholarship on transnational climate governance Political Theory and Global Climate Action launches an exploration sensitive to changing patterns of practice focused on diversity of actors driven to explore historically contingent

conditions of possibility and responsive to questions of equity and justice in the context of transformations The result is a repositioning of political thought on climate change engaging political philosophers scholars of politics and governance and drivers of climate action worldwide at nonstate and substate levels interested in the social and political meaning of their engagement

Climate Change Economics and Policy Michael A. Toman, 2010-09-30 What are the potential adverse impacts of climate change How can society determine the amount of protection against climate change that is warranted given the benefits and costs of various policies In concise informative chapters Climate Economics and Policy considers the key issues involved in one of the most important policy debates of our time Beginning with an overview and policy history it explores the potential impact of climate change on a variety of domains including water resources agriculture and forests The contributors then provide assessments of policies that will affect greenhouse gas emissions including electricity restructuring carbon sequestration in forests and early reduction programs In considering both domestic and international policy options the authors examine command and control strategies energy efficiency opportunities taxes emissions trading subsidy reform and inducements for technological progress Both policymakers and the general public will find this volume to be a convenient and authoritative guide to climate change risk and policy It is a useful resource for professional education programs and an important addition for college courses in environmental economics and environmental studies Climate Economics and Policy is a collection of Issue Briefs prepared by the staff of Resources for the Future RFF and outside experts Many are adapted from pieces originally disseminated on Weathervane RFF's acclaimed web site on global climate change

Climate Change and International Politics Narottam Gaan, 2008 Accustomed to understanding security primarily a matter spatial exercise in distancing and boundary making on the part of states and their military alliances to secure borders and institutions from outside threats the nations of the world have so far given a short shrift to the gravity of environmental degradation as a factor or catalyst of intrastate or interstate conflict or at worst a security threat to entire humanity until the shafts of retaliatory responses of the infuriated climate change to the cloddish and brutish power of the rich industrialized nations to destroy it by its emission of carbon dioxide and other greenhouse gases pointed toward man menacing with funereal and cascading consequences of global warming Thus climate change which has so far been on the fringe of human concern or in American President's view a myth or a hoax has catapulted into the center stage of great political flare up among the nations of the world on the issue of apportioning the responsibility on rich industrialized nations or the populous South to mitigate the dangers of climate change which seems to be mired in the contradiction between North's advocacy of inequity in having uncontested access to the atmosphere as carbon sinks and equity while disabusing the atmosphere of the carbon debris Not walking on trodden furrows this book expatiates on the desideratum of a paradigm shift from faith in the Newtonian mechanistic view of the universe to a faith in the profundity of Eastern wisdom and new insights presently found in science which see both nature and human beings as warp and woof woven beautifully into the divine tapestry *Sharing*

the Effort Matthew Paterson, Michael Grubb, 1996 This report presents selected papers from a Royal Institute workshop on the differentiation within industrialized countries to limit greenhouse gas emissions together with an overview of the discussions The workshop brought together leading negotiators and analysts to explore whether and how emission commitments might be differentiated *The Journal of Energy and Development* ,1997 Distributional Choices in EU Climate Change Law and Policy Javier De Cendra de Larragán, 2011-01-01 Climate change policy inevitably has two core components the goals and the means chosen to pursue those goals Decisions on goals and means necessarily have distributional consequences Any policy choice generates winners and losers While this outcome cannot be avoided even doing nothing leads to distributional consequences policymakers can through the choice design and implementation of policies shape to some extent the distribution of the burdens of mitigation and adaptation to climate change In greater depth than any previous legal study in the field this book deals with the way in which the European Union EU has dealt with climate change and with the distribution of the benefits and costs of climate change mitigation policies among affected parties With extraordinary thoroughness the author assesses the legality of choices made particularly concerning mitigation targets and timelines and examines the role that legal principles can play in the adoption interpretation and judicial testing of distributional choices His analysis of the tension between such choices and EU law is bolstered by an exploration of emerging legal principles which could provide additional guidance in this challenging and controversial area Among the core issues dealt with are the following relationship among mitigation adaptation and sustainable development regulations as means to make distributional choices distributional choices between generations and the principle of intergenerational justice distributional choices concerning firms and individuals the participation of affected parties in distributional choices access to justice in EU courts to challenge violations of procedural environmental rights the role of legal principles in making evaluating and testing distributional choices the principle of proportionality with its tests of appropriateness and necessity the principle of equality the precautionary principle the principle of prevention the polluter pays principle A concluding chapter offers deeply informed recommendations regarding the design of EU climate change law including a preliminary assessment of EU wide personal carbon trading In its insightful illumination of how the inevitable trade offs weaknesses inconsistencies and ambiguities in the way law deals with distributional choices renders them vulnerable to external pressures this book will be of enormous value to regulators and policymakers concerned with effective efficient and fair climate change measures As a critical assessment of existing EU climate change laws and policies and as a systematic analysis of the problem of burden sharing this book will also prove highly valuable to academics in environmental fields of study *Climate Change 2007: Mitigation of climate change* ,2007 Routledge Revivals: Kyoto Protocol (1999) Michael Grubb, Christiaan Vrolijk, Duncan Brack, 2018-05-08 Originally published in 1999 The Kyoto Protocol provides a detailed discussion on the history terms and implications of the Kyoto Protocol 1997 It explains the meaning of provision on emissions

trading and other flexibility mechanisms and provides a quantitative analysis using the Energy and Environment Programme's emissions trading model. It also contains the full text of the Kyoto Protocol and developments at the 4th Conference of the Parties in December 1998. This book will be of interest to academics working in the field of climate change as well as the broader area of environment and sustainability.

Climate Change 2007 - Mitigation of Climate Change Intergovernmental Panel on Climate Change, 2007-11-12. The Climate Change 2007 volumes of the Fourth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) provide the most comprehensive and balanced assessment of climate change available. This IPCC Working Group III volume provides a comprehensive state of the art and worldwide overview of scientific knowledge related to the mitigation of climate change. It includes a detailed assessment of costs and potentials of mitigation technologies and practices, implementation barriers and policy options for the sectors: energy, supply, transport, buildings, industry, agriculture, forestry, and waste management. It links sustainable development policies with climate change practices. This volume will again be the standard reference for all those concerned with climate change, including students and researchers, analysts and decision makers in governments and the private sector.
