**Palaeoproterozoic Supercontinents and Global Evolution** Steven Michael Reddy, 2009 The Palaeoproterozoic era 2500 1600 Ma is a critical period of Earth history with dynamic evolution from the deep planetary interior to its surface environment Several lines of geological evidence suggest the existence of at least one pre Rodinia supercontinent named Nuna or Columbia which formed near the end of Palaeoproterozoic time Prior to this assembly there may have been an older supercontinent Kenorland or perhaps only independently drifting supercratons The tectonic records of amalgamation and dispersal of these ancient landmasses provide a framework that links processes of the deep Earth with those of its fluid envelope The sixteen papers in this volume present reviews and new analytical data that span the geological record of Palaeoproterozoic Earth The volume is useful as a reference book for students and professional geoscientists interested in this important period of global evolution

psychology      **Effects of deep fluids in hydrocarbon accumulations in sedimentary basins** Chen Zhang, Shu Jiang, Huaguo Wen, Dongya Zhu, Junhui Wang, 2023-03-13      **Carbon Dioxide Chemistry, Capture and Oil Recovery** Iyad Karamé, Janah Shaya, Hassan Srour, 2018-08-16 Fossil fuels still need to meet the growing demand of global economic development yet they are often considered as one of the main sources of the CO<sub>2</sub> release in the atmosphere CO<sub>2</sub> which is the primary greenhouse gas GHG is periodically exchanged among the land surface ocean and atmosphere where various creatures absorb and produce it daily However the balanced processes of producing and consuming the CO<sub>2</sub> by nature are unfortunately faced by the anthropogenic release of CO<sub>2</sub> Decreasing the emissions of these greenhouse gases is becoming more urgent Therefore carbon sequestration and storage CSS of CO<sub>2</sub> its utilization in oil recovery as well as its conversion into fuels and chemicals emerge as active options and potential strategies to mitigate CO<sub>2</sub> emissions and climate change energy crises and challenges in the storage of energy      Cosmic Frontiers Nigel Metcalfe, Thomas Shanks, 2007 These proceedings of an international conference held during July August 2006 in Durham UK provide a comprehensive up to date overview of recent observational breakthroughs from the present generation of astronomical surveys and what they imply for theories of galaxy formation and cosmology Starting in the early Universe with the observations of the microwave background the evidence for the standard cosmological model provided by the WMAP satellite is reviewed It is the exquisite balance between the impressive fit to the microwave background temperature fluctuations provided by the standard model and its requirements for finely tuned dark energy and a still undetected Cold Dark Matter particle that makes this such an exciting moment in cosmology Other pieces of evidence for the standard model are also reviews these include the form of large scale galaxy clustering from the extensive 2dF and SDSS surveys and also the Type Ia supernova Hubble diagram all of which involved heroic astronomical efforts in surveying the sky The conference then looks at the deeper surveys now aimed at understanding the processes of galaxy formation and evolution Here there appears to be considerably less support for the standard model In particular massive early type galaxies appear to be old and also to have been in place at high redshifts This evolutionary behavior does not arise naturally from the standard model and the proceedings review ways of reconciling such observations with theory Thus the 15 invited reviews 29 contributed talks and 39 poster papers combine to provide a state of the art snapshot of the observational questions set by survey astronomy for theories of cosmology and galaxy formation The book is suitable for researchers and graduate students interested in both theoretical and observational aspects of survey astronomy galaxy formation and cosmology publisher s website      **A Nationwide Framework for Surveillance of Cardiovascular and Chronic Lung Diseases** Institute of Medicine, Board on Population Health and Public Health Practice, Committee on a National Surveillance System for Cardiovascular and Select Chronic Diseases, 2011-09-26 Chronic diseases are common and costly yet they are also among the most preventable health problems Comprehensive and accurate disease surveillance systems are needed to implement successful efforts which will reduce the burden of chronic diseases on

the U S population A number of sources of surveillance data including population surveys cohort studies disease registries administrative health data and vital statistics contribute critical information about chronic disease But no central surveillance system provides the information needed to analyze how chronic disease impacts the U S population to identify public health priorities or to track the progress of preventive efforts A Nationwide Framework for Surveillance of Cardiovascular and Chronic Lung Diseases outlines a conceptual framework for building a national chronic disease surveillance system focused primarily on cardiovascular and chronic lung diseases This system should be capable of providing data on disparities in incidence and prevalence of the diseases by race ethnicity socioeconomic status and geographic region along with data on disease risk factors clinical care delivery and functional health outcomes This coordinated surveillance system is needed to integrate and expand existing information across the multiple levels of decision making in order to generate actionable timely knowledge for a range of stakeholders at the local state or regional and national levels The recommendations presented in A Nationwide Framework for Surveillance of Cardiovascular and Chronic Lung Diseases focus on data collection resource allocation monitoring activities and implementation The report also recommends that systems evolve along with new knowledge about emerging risk factors advancing technologies and new understanding of the basis for disease This report will inform decision making among federal health agencies especially the Department of Health and Human Services public health and clinical practitioners non governmental organizations and policy makers among others
