New Methods for Measuring and Analyzing Segregation Mark Fossett, 2017-09-14 This book is open access under a CC BY NC 2.5 license This book introduces new methods for measuring and analyzing residential segregation It begins by placing all popular segregation indices in the difference of group means framework wherein index scores can be obtained as simple differences of group means on individual level residential attainments scored from area racial composition Drawing on the insight that in this framework index scores are additively determined by individual residential attainments the book shows that the level of segregation in a given city can be equated to the effect of group membership e.g. race on individual residential attainments This unifies separate research traditions in the field by joining the analysis of segregation at the aggregate level with the analysis of residential attainments for individuals Next it shows how segregation analysis can be extended by using multivariate attainment models to assess the impact of group membership i.e. the level of segregation for a city while including controls

for other relevant individual characteristics e.g. income, education, language, nativity etc. It then illustrates how one can use these models to quantitatively assess the extent to which segregation traces to impacts of group membership on residential attainments versus other factors such as group differences in income. The book then shows how micro level attainment models can be used to study macro level variation in segregation specifically by estimating multi level models of individual residential attainments to assess how the effect of group membership i.e. segregation index scores vary with city characteristics. Finally the book introduces refined versions of popular indices that are free of the vexing problem of upward bias. This improves the quality of segregation measurement directly at the level of individual cases and expanding the number of cases that can be safely included in empirical studies.

Family Life in Black America Robert Joseph Taylor, James S. Jackson, Linda M. Chatters, 1997-08-13. Most studies of Black families have had a problem focus offering a narrow view of important issues such as out of wedlock births, single parent families and childhood poverty. *Family Life in Black America* moves away from this negative perspective and instead deals with a wide range of issues including sexuality, procreation, infancy, adulthood, adolescence, cohabitation, parenting, grandparenting and ageing. A fresh aspect of this book is the amount of diversity it reveals within black families and the forces that shape, limit and enhance them.
