Dialogues with a Trickster Phillip McArthur, 2024-10-31 We joked often laughed to the point of crying that deep visceral laughter not just about the subversive antics of Letao but to all the allusions to how he my friend and I were tricksters in our own right moving between our cultural worlds illuminating ambiguities and celebrating them This rich experimental ethnography plays within the margins of mythology and ethnographic practice to pursue a decolonizing method of inquiry and intercultural engagement Through a range of mischievous narratives about the mythological trickster Letao a rŏm aje Indigenous Marshall Islander storyteller takes the author on a journey into a deep cosmological and epistemological past and back into the colonial and imperial present Transcribed in this book the simultaneously effortless and pointedly deliberate conversations between author Phillip H McArthur and respected rŏm aje elder Kometo Alb t subvert and dismantle boundaries of time culture and religion Through lighthearted dialogue Kometo explores serious histories of imperial abuse war atomic bomb testing ideologies of social power decolonization Christianity magic sex and death He plays upon a range of ambiguities such as the slipperiness of mythic

discourse ethnographic entanglements ambivalent analogies about Americans cosmological musings about Western and Indigenous deities the complexities of matrilineal kinship and modern manifestations of power the interplay of magic within politics and religion the social efficacy of ideologies of deception and revelation through divination the way by which risky topics and profane stories bring the sacred into relief and prophecies that presage the end of culture and the death of the trickster In this way of relating the boundaries blur between ethnographer and subject and the theories of myth and folklore all become part of the dialogic process The author critically attends to his positionality as well as to how Kometo slyly positions them through his jokes and in drawing the author into trickster mythologies Written in a narrative style that combines transcribed dialogue poetic ethnographic descriptions applied theory and sharp analysis and storytelling this book grants us insight into a decade long friendship and honors the wisdom of a trickster Little Billy's Letters Bill Geerhart, 2010-03-09 In this irreverent collection Little Billy brings together his original outlandish letters written to celebrities criminals and politicians the responses they elicited and a host of photos and miscellany on a variety of wild topics El-Hi Textbooks & Serials in Print, 2003 ,2003 *Cooperative Breeding in Vertebrates* Walter D. Koenig, Janis L. Dickinson, 2016-01-07 Brings together long term studies of cooperation in vertebrates that challenge our understanding of the evolution of social behavior Assessing Prenatal and Neonatal Gonadal Steroid Exposure for Studies of Human Development: Methodological and Theoretical Challenges Rebecca Christine Knickmeyer, Marsha L. Davenport, Bonnie Auyeung, 2015-07-28 There is extensive evidence from animal models that gonadal steroids produced in fetal and neonatal life act on the developing organism to produce sex differences far beyond the reproductive system That early gonadal steroid exposure also plays an important role in human development is supported by studies of individuals with disorders of sex determination and differentiation It is much less clear whether normal variation in gonadal steroid exposure predicts sexually dimorphic health outcomes or within sex variation This is largely due to challenges related to the assessment of gonadal steroid exposure in the developing fetus and neonate Regarding the prenatal period serial measurements of serum hormone levels in the fetus for use in studies of later development are not possible for ethical reasons Researchers have measured hormones in maternal blood umbilical cord blood and amniotic fluid used putative anthropometric indices such as the relative lengths of the 2nd and 4th digits 2D 4D evaluated common variants in genes related to hormone production transport and metabolism and examined development in opposite sex twins and the offspring of mothers with hyperandrogeny Each of these approaches has particular strengths and notable weaknesses Regarding the neonatal period serial measurements in serum are often impractical for studies of typical development Salivary hormone assays frequently used in studies of older children and adults have not been extensively investigated in neonates The most appropriate timing for testing is also open to debate Early work suggested that testosterone levels in males begin to rise after the first postnatal week peak around the 3rd to 4th months of life and then drop back to very low levels by 1 year However a more recent study of 138 infants did not

demonstrate this pattern Testosterone was highest on the day of birth and gradually dropped over the first 6 months Even less is known about patterns of early estrogen exposure though highly sensitive bioassays indicated that sex differences are present in early childhood In addition the design and interpretation of studies may be impacted by widespread acceptance of conceptual frameworks that are not well supported empirically For example many researchers presume that the free hormone hypothesis which states that unbound hormone is more readily diffusible into tissues and thus a better measure of actual exposure is true However this hypothesis has been challenged on multiple grounds A second example it is generally accepted that masculinization of the human brain is primarily mediated by the androgen receptor in contrast to rodents where the estrogen receptor plays a major role in part because chromosomal males with complete androgen insensitivity generally espouse a female gender identity However this is not always the case and other sexually dimorphic outcomes have not been carefully assessed in CAIS The aim of this research topic is to gather together experimental and review papers which address the diverse challenges in assessing prenatal and neonatal gonadal steroid exposure for studies of human development with the expectation that this will allow more critical appraisal of existing studies identify critical research gaps and improve the design of future studies
