I. Sandeman, 2005 This paper provides an overview of the geology of the Darby Lake and Arrowsmith River area located south west of Committee Bay Nunavut The area is divided into three north east trending sub domains all of which are dominated by granitoid rocks Characteristic rock types from the area are described along with the phases of regional deformation and metamorphism in the area Implications of the findings for mineral deposits are briefly discussed Proterozoic East Gondwana Masaru Yoshida, Brian F. Windley, Somnath Dasgupta, 2003 This volume focuses on Late Mesoproterozoic to early Cambrian events related to Gondwana assembly and break up The nineteen papers provide a comprehensive review including advanced knowledge and new data from all critical areas of East Gondwana The recent knowledge of the evolution of East Gondwana which was regarded as an integral part of the Mesoproterozoic supercontinent Rodinia is the major theme of the volume which is reinforced by highlighting this radical and new understanding of the evolution of this region

Glacial Sedimentary Processes and Products Michael J. Hambrey, Poul Christoffersen, Neil F. Glasser, Bryn Hubbard, 2009-03-05 Associating ice masses with the transport and deposition of sediments has long formed a central theme in glaciology and glacial geomorphology The reason for this focus is clear in that ice masses are responsible for much of the physical landscape which characterizes the Earth's glaciated regions This association also holds at a variety of scales for example from the grain size characteristics of small scale moraines to the structural architecture of large scale glacial sedimentary sequences in both surface and subaqueous environments This volume brings numerous state of the art research contributions together each relating to a different physical setting spatial scale process or investigative technique The result is a diverse and interesting collection of papers by glaciologists numerical modellers and glacial geologists which are all linked by the theme of investigating the relationships between the behaviour of ice masses and their resulting sedimentary sequences *Journal of Research of the U.S. Geological Survey* Geological Survey (U.S.), Geological Survey (U.S.), 1977
