Small, 2012-12-06 In general terms the shape of an object data set or image can be defined as the total of all information that is invariant under translations rotations and isotropic rescalings Thus two objects can be said to have the same shape if they are similar in the sense of Euclidean geometry For example all equilateral triangles have the same shape and so do all cubes In applications bodies rarely have exactly the same shape within measurement error In such cases the variation in shape can often be the subject of statistical analysis The last decade has seen a considerable growth in interest in the statistical theory of shape This has been the result of a synthesis of a number of different areas and a recognition that

there is considerable common ground among these areas in their study of shape variation Despite this synthesis of disciplines there are several different schools of statistical shape analysis One of these the Kendall school of shape analysis uses a variety of mathematical tools from differential geometry and probability and is the subject of this book The book does not assume a particularly strong background by the reader in these subjects and so a brief introduction is provided to each of these topics Anyone who is unfamiliar with this material is advised to consult a more complete reference As the literature on these subjects is vast the introductory sections can be used as a brief guide to the literature

The Dinosaur Films of Ray Harryhausen Roy P. Webber, 2004 Ray Harryhausen's animated creatures sparkled with predatory alertness and subtle quirks of behavior that stamped each with a distinct and memorable personality His use of stop motion animation a method of animating movable models and puppets brought dinosaurs and monsters to life on the silver screen Many animators and special effects wizards like Phil Tippett of Jurassic Park and Jim Aupperle of Planet of the Dinosaurs who are still working on prehistoric based films openly credit Ray Harryhausen as having influenced their careers His films are famous for being among the very best of the genre The first chapter of this book chronicles Harryhausen's formative years and work on numerous 16mm experiments beginning with his viewing of King Kong in 1933 The next four chapters cover his four feature length dinosaur films The Beast from 20 000 Fathoms The Animal World One Million Years B C and The Valley of Gwangi These chapters provide extensive information about all aspects of the staging of their stop motion content and many additional facets of the overall production process The paleontological accuracy of his saurians from a modern perspective is also examined A chapter on his work and experiences in the 1970s and beyond discusses potential dinosaur projects as well as The Golden Voyage of Sinbad which is not a saurian film but does include the bat winged homunculus An appendix covers a number of dinosaur related films that Harryhausen had a hand in

Prehistoric Monsters Allen A. Debus, 2014-11-21 Over centuries discoveries of fossil bones spawned legends of monsters such as giants and dragons As the field of earth sciences matured during the 19th century early fossilists gained understanding of prehistoric creatures such as Tyrannosaurus Triceratops and Stegosaurus This historical study examines how these genuine beasts morphed in the public imagination into mythical powerful engines of destruction and harbingers of cataclysm taking their place in popular culture film and literature as symbols of lost worlds where time stands still

Riddle of the Feathered Dragons Alan Feduccia, 2012-01-01 Inspired by the spectacular discoveries of the past two decades from the Age of Reptiles in China *Riddle of the Feathered Dragons* explores how these miraculous fossils have transformed the contentious arena of bird and dinosaur evolution. Aside from being the most comprehensive discussion of these avian and associated discoveries, the author delves into the world of investigative journalism to expose the darker side of the world of fossil birds and dinosaurs. The book exposes the massive unfounded speculation that has characterized the field of vertebrate paleontology and published extensively in the world's most prestigious journals, including everything from supposed dinosaur protein to so-called feathered dinosaurs. The book questions the validity of the foundational tenets of the now unquestionable orthodoxy of bird and dinosaur evolution, including bird origins, feathered dinosaurs, flight origin from the ground up, and hot-blooded dinosaurs and their proteins. It exposes how speculation has gone far beyond the ability of the currently available evidence to yield answers. The author concludes that birds are best defined by a more traditional definition of the possession of feathers and avian flight architecture, that the so-called feathered dinosaurs are most likely derived avians, and that flight clearly originated from the trees down from ancestors that antedated the dinosaurs rather than a direct linear descent.

Predator-Prey Interactions in the Fossil Record Patricia H. Kelley, Michal Kowalewski, Thor A. Hansen, 2012-12-06 From the Foreword: Predator-prey interactions are among the most significant of all organism-organism interactions. It will only be by compiling and evaluating data on predator-prey relations as they are recorded in the fossil record that we can hope to tease apart their role in the tangled web of evolutionary interaction over time. This volume, compiled by a group of expert specialists on the evidence of predator-prey interactions in the fossil record, is a pioneering effort to collate the information now accumulating in this important field. It will be a standard reference on which future study of one of the central dynamics of ecology as seen in the fossil record will be built. Richard K. Bambach, Professor Emeritus, Virginia Tech, Associate of the Botanical Museum, Harvard University.

Tyrannosaurus Rex, the Tyrant King Peter L. Larson, Kenneth Carpenter, 2008-07-17 Accompanying CD-ROM has supplementary materials related to chapters 7: color images of the black and white figures in the book; 11: Flash animated movie about tyrannosaurid postures; and 13: skull bone atlas.
