Predicates And Temporal Arguments:

Predicates and Temporal Arguments Theodore B. Fernald, 2000 A distinction is made in formal semantics between stage level predicates predicates that describe the general state of a noun and individual level predicates predicates that specify the specific properties of a noun Fernald investigates various contexts in which this distinction is traditionally said to come into play His aim is to show that the effects displayed are not uniform and that the differences between the analyses proposed in the literature arise from the authors considering different subsets of data that they take to exemplify the core meaning of the stage individual distinction Fernald presents alternatives and extensions that shed light on the limitations of previous theories as well as making original observations about important aspects of the topic including coercion and perceptual reports vs other phenomena

Formal Ontology in Information Systems Brandon Bennett, Christiane Fellbaum, 2006 Aims to provide a forum for genuine interdisciplinary exchange in the spirit of a unified effort towards solving the problems of ontology with an eye to both theoretical issues and concrete applications This book contains a range of areas all of which are important to the development of formal ontologies

Deductive and Object-Oriented Databases Francois Bry, Raghu Ramakrishnan, Kotagiri Ramamohanarao, 1997-11-12 This book constitutes the refereed proceedings of the 5th International Conference on Deductive and Object Oriented Databases DOOD 97 held in Montreux Switzerland in December 1997 The 22 revised full papers presented in this book were selected from a total of 59 submissions Also included are abstracts or full versions of three invited talks and three tutorials and six short presentations The papers are organized in topical sections on materialized view maintenance extending DBMs features database updates managing change in object databases semantics of active databases formal semantics and new directions

Events, Arguments, and Aspects Klaus Robering, 2014-03-15 The verb has often been considered the center of the sentence and has hence always attracted the special attention of the linguist The present volume collects novel approaches to two classical topics within verbal semantics namely argument structure and the treatment of time and aspect The linguistic material covered comes from a broad spectrum of languages including English German Danish Ukrainian and Australian aboriginal languages and methods from both cognitive and formal semantics are applied in the analyses presented here Some of the authors use a variety of event semantics in order to analyze argument structure and aspect whereas others employ ideas coming from object oriented programming in order to achieve new insights into the way how verbs select their arguments and how events are classified into different types Both kinds of methods are also used to give accounts of dynamical aspects of semantic interpretation such as coercion and type shifting

Rules and Reasoning Anna Fensel, Ana Ozaki, Dumitru Roman, Ahmet Soylu, 2023-10-14 This book constitutes the refereed proceedings of the 7th International Joint Conference on Rules and Reasoning RuleML RR 2023 held in Oslo Norway during September 18 20 2023 The 13 full papers and 3 short papers included in these proceedings were carefully reviewed and selected from 46 submissions They focus on all aspects of

theoretical advances novel technologies innovative applications knowledge representation reasoning with rules and research development applications of rule based systems *Theoretical Analyses in Romance Linguistics* Christiane Laeufer, Terrell A. Morgan, 1991-01-01 This nineteenth edition of LSRL proceedings contains a selection of papers on variety of Romance idioms and includes current topics in established areas of study The phonology papers focus mostly on syllabic and higher level prosodic structure The morphology section deals primarily with compounding The syntax contributions principally treat infinitival clauses extraction phenomena and binding While synchronic data serve as the point of departure in most of the studies historical perspectives are also considered in each major section Included in the volume are two invited contributions by Violeta Demonte on linking and case with prepositional verbs and Shana Poplack on variation in the form and function of the subjunctive in Canadian French *Formal Perspectives on Romance Linguistics* Jean-Marc Authier, Barbara E.

Bullock, Lisa A. Reed, 1999-07-15 This volume presents current research in the formal treatment of linguistic phenomena in the Romance languages It focuses on a variety of issues in phonology second language acquisition semantics and syntax Topics in phonological theory include the analysis of geminates assimilation rhotics aspiration syllabification the interaction of phonology with morphology the phonology phonetics interface and issues of transderivation and allomorphy selection The primary question addressed in the area of second language acquisition theory is the issue of learners access to Universal Grammar The studies in semantic theory examine the proper analysis of indefinites bare plurals and specificity with a particular emphasis on the syntax semantics interface Finally the essays on syntactic theory discuss issues pertaining to argument structure functional projections phrase structure and adjunction feature checking and the syntactic representation of tense **The Language of Time** Inderjeet Mani, James Pustejovsky, Robert Gaizauskas, 2005 Table of contents

Aspects of Grammatical Architecture Alain Rouveret, 2018-01-19 This volume collects eleven papers written between 1991 and 2016 some of them unpublished which explore various aspects of the architecture of grammar in a minimalist perspective The phenomena that are brought to bear on the architectural issue come from a range of languages among them French European Portuguese Welsh German and English and include clitic placement expletive pronouns resumption causative structures copulative and existential constructions VP ellipsis as well as the distinction between the SVO VSO and V2 linguistic types This book sheds a new light on the division of labor between components and paves the way for further research on grammatical architecture *Individuals in Time* María J. Arche, 2006-01-01 This monograph investigates the temporal properties of those predicates referring to individuals the so called individual level IL predicates in contrast to those known as stage level SL predicates Many of the traditional tenets attributed to the IL SL dichotomy are not solidly founded this book claims as it examines current theoretical issues concerning the syntax semantics interface such as the relation between semantic properties of predicates and their syntactic structure By using the contrast found in Spanish copular clauses *ser* vs *estar* *Individuals in Time* shows that the conception of IL predicates as permanent and stative cannot

be maintained The existence of nonstative IL predicates is demonstrated through analyzing the correlation between the syntactic presence of certain projections specifically prepositional complements and process like aspect properties This detailed examination of IL predicates in the domains of inner aspect outer aspect and tense will be welcomed by scholars and students with an interest in event structure tense and aspect

Nonfinite Structures in Theory and Change D. Gary Miller, 2002 This book investigates the precise nature of nonfinite structures and explores the ways in which they change Gary Miller examines a broad range of structures including traditional infinitives gerunds and participles across different Indo European and some non Indo European languages now and in the past As structures which are nonfinite in some languages are not so in others the question arises whether the concept nonfinite has any meaning or explanatory power In seeking an answer to this conundrum the author shows that infinitives with subject person agreement such as in West Greenlandic Modern Greek Portuguese Welsh and Hungarian share properties with prototypical nonfinite formations Professor Miller examines languages with morphologically marked tense on infinitives including Ancient Greek and Latin and Modern Turkish He demonstrates that nonfinite structures that can be assigned non structural inherent or semantic case differ systematically from those with either structural or no case The book concludes with a substantial history of infinitives gerunds and participles in Old and Middle English which reveals why and how nonfinite structures change and vary over time Gary Miller's innovative theoretical reasoning and the wide range of evidence on which it is brought to bear make this book a considerable contribution to the understanding of grammatical change and its formal expression as well as to the history of English

Handbook of Knowledge Representation Frank van Harmelen, Vladimir Lifschitz, Bruce Porter, 2008-01-08 Handbook of Knowledge Representation describes the essential foundations of Knowledge Representation which lies at the core of Artificial Intelligence AI The book provides an up to date review of twenty five key topics in knowledge representation written by the leaders of each field It includes a tutorial background and cutting edge developments as well as applications of Knowledge Representation in a variety of AI systems This handbook is organized into three parts Part I deals with general methods in Knowledge Representation and reasoning and covers such topics as classical logic in Knowledge Representation satisfiability solvers description logics constraint programming conceptual graphs nonmonotonic reasoning model based problem solving and Bayesian networks Part II focuses on classes of knowledge and specialized representations with chapters on temporal representation and reasoning spatial and physical reasoning reasoning about knowledge and belief temporal action logics and nonmonotonic causal logic Part III discusses Knowledge Representation in applications such as question answering the semantic web automated planning cognitive robotics multi agent systems and knowledge engineering This book is an essential resource for graduate students researchers and practitioners in knowledge representation and AI Make your computer smarter Handle qualitative and uncertain information Improve computational tractability to solve your problems easily

Advanced Database Systems Carlo Zaniolo, 1997-05

The database field has experienced a rapid and incessant growth since the development of relational databases. The progress in database systems and applications has produced a diverse landscape of specialized technology areas that have often become the exclusive domain of research specialists. Examples include active databases, temporal databases, object oriented databases, deductive databases, imprecise reasoning and queries, and multimedia information systems. This book provides a systematic introduction to and an in depth treatment of these advanced database areas. It supplies practitioners and researchers with authoritative coverage of recent technological advances that are shaping the future of commercial database systems and intelligent information systems. *Advanced Database Systems* was written by a team of six leading specialists who have made significant contributions to the development of the technology areas covered in the book. Benefiting from the authors' long experience teaching graduate and professional courses, this book is designed to provide a gradual introduction to advanced research topics and includes many examples and exercises to support its use for individual study, desk reference, and graduate classroom teaching. *Phrase Structure and the Lexicon* J. Rooryck, Laurie Zaring, 2013-03-14

V ThemelPatients to the lowest specifier of *V* and Agents to a position outside the minimal *VP*. Again thematic information is encoded in terms of configurational properties. Addressing the issue of phrase structure in another domain, Margaret Speas investigates the status of null pronominal objects in Navajo. Following Rizzi 1986, she assumes that null pronouns must meet both a licensing and an identification condition. More specifically, she demonstrates that distributional restrictions on null pronominal objects in Navajo can be explained if it is assumed that null objects obey the identification condition expressed by the Generalized Control Rule of Huang 1984. Distinguishing three types of null objects, she argues that relevant licensing condition on two subtypes of null objects involves rich agreement. However, it appears that there are languages lacking rich agreement but with *pro* in object position. Speas accounts for these phenomena by a rule of economy of projection. A second series of papers is concerned with the way in which functional categories derive aspects of sentential interpretation. Three issues in this research program are investigated here: external arguments as arguments of functional projections (Kratzer), the specificity interpretation of clitics (Sportiche), and the interpretation of tense (Stowell). In all three cases, phrase structure is put to use to derive interpretive effects. Angelika Kratzer proposes that external arguments are not part of the verb.

Approaches to Hungarian Katalin É. Kiss, Balázs Surányi, Éva Dékány, 2015-05-15 This volume of papers selected from the 11th International Conference on the Structure of Hungarian addresses current topics in Hungarian linguistics focusing on their theoretical implications. The papers in syntax investigate the complement zone of nouns, the syntax of case assigning, adpositions, sluicing in relative clauses, generic habitual readings in clauses containing a free choice item, the argument structure of experiencer verbs in Hungarian, and cataphoric propositional pronoun insertion in Hungarian and German. The papers in morphosyntax analyze morphological alienability splits and the manifestation of the Inverse Agreement Constraint in Hungarian. The studies in phonetics and phonology inquire into regressive voicing assimilation in Hungarian and Slovak.

and explore the predictions of the Functional Load Hypothesis for stress marking and the relationship between the phonetic and phonological properties of a in Hungarian The volume will appeal not just to scholars working on Hungarian but to a general audience of theoretical linguists **Theoretical and Crosslinguistic Approaches to the Semantics of Aspect**

Susan D. Rothstein,2008-03-20 The papers in this volume investigate the semantics of aspect from both a theoretical and a crosslinguistic point of view in a wide range of languages from a number of different language families The papers are all informed by the belief that a thorough exposure to the expression of aspect crosslinguistically is crucial for progress in understanding how the semantics of aspect works and what the semantic basis of aspectual distinctions is The languages discussed include Russian English Dutch Hebrew Mandarin Japanese and Kalaallisut The issues discussed in this volume include the centrality of measuring and counting in an understanding of telicity the importance of the singular plural distinction in the study of aspect the importance of homogeneity as a property of event types the flexibility of lexical classes and the interaction between expressions of aspect and the particular morphosyntactic structure of a language Speaking of Events James Higginbotham,Fabio Pianesi,Achille C. Varzi,2000-04-13 In recent years the idea that an adequate semantics of ordinary language calls for some theory of events has sparked considerable debate among linguists and philosophers Speaking of Events offers a vivid and up to date indication of this debate with emphasis precisely on the interplay between linguistic applications and philosophical implications Each chapter has been written expressly for this volume by leading authors in the field including Nicholas Asher Pier Marco Bertinetto Johannes Brandl Denis Delfitto Regine Eckardt James Higginbotham Alessandro Lenci Terence Parsons Alice ter Meulen and Henk Verkuyl **Syntactic Parsing Strategies in Italian** M. de Vincenzi,2012-12-06 *Reasoning About Plans* James Allen, Henry Kautz, Richard Pelavin, Josh

Tenenberg,2014-06-28 This book presents four contributions to planning research within an integrated framework James Allen offers a survey of his research in the field of temporal reasoning and then describes a planning system formalized and implemented directly as an inference process in the temporal logic Starting from the same logic Henry Kautz develops the first formal specification of the plan recognition process and develops a powerful family of algorithms for plan recognition in complex situations Richard Pelavin then extends the temporal logic with model operators that allow the representation to support reasoning about complex planning situations involving simultaneous interacting actions and interaction with external events Finally Josh Tenenbergs introduces two different formalisms of abstraction in planning systems and explores the properties of these abstraction techniques in depth
