**Aristotle on the Necessity of Public Education** Randall R. Curren, 2000-11-22 The book concludes that Aristotle's views yield a compelling argument for the claim that public supervision of education is a necessary condition for a just society. It examines the implications and limitations of that argument including particularly the form and substance of the educational equality which it demands. Contrasting it with other recent arguments for educational equality, I conclude that it provides the most decisive argument for educational equality available but also that it does not establish a legitimate basis for a state monopoly on the provision of schooling and for ensuring its availability to everyone. Some privatization schemes but not others would be compatible with this result.

**Leaders in Philosophy of Education** Leonard J. Waks, 2014-11-26 In the late 1950s plans were initiated to bring a higher level of professionalism to the training of educational professionals. New projects included introducing contemporary scholarship from the humanities and social sciences into colleges of education to revitalize the education knowledge base. In North America and the United Kingdom analytical philosophers were recruited to inaugurate a new philosophy of education. Analytical philosophy of education soon spread throughout the English speaking world. By the 1980s this analytical impulse had largely subsided. Philosophers trained in analytical philosophy and their students turned to more ambitious normative pursuits related to problems of social justice and democracy. Meanwhile feminist philosophers opened up new issues regarding the education of women and the nature of teaching and knowing and a new wave of pragmatist philosophers turned to issues of educational policy. By the 1990s Anglo American philosophers of education welcomed a dialogue with counterparts in Western Europe and the field responded to established trends in European philosophy ranging from critical theory and phenomenology to post structuralism. New leaders emerged in philosophy of education representing all of these various strands. This volume documents the emergence of contemporary philosophy of education as seen by those spearheading these trends.

**Revisiting "The Culture of the School and the Problem of Change"** Seymour B. Sarason, 1996 Revisiting The Culture of the School and the Problem of Change provocatively and seamlessly joins Seymour Sarason's classic landmark text on school change with his own insightful reflections on those same issues in the face of today's crisis in public schools. This is an extensive monograph length revisiting Part I of this book reproduces the second edition of Sarason's ground breaking work The Culture of the School and the Problem of Change in which he detailed how change can affect a school's culturally diverse environment either through the implementation of new programs or as a result of federally imposed regulations. Throughout many of the major assumptions about change in institutions are challenged. Specific events and examples demonstrate that any attempt to implement change involves some existing regularity within the school. Dr Sarason also takes a close look at government involvement in change.

efforts in schooling and includes a detailed examination of current efforts to implement PL 94 142 into public schools He presents compelling evidence that the federal effort to change and improve schools has largely been a failure Also included are investigations into the purposes of schooling and how these purposes can be affected by change and the process by which educators and administrators formulate intended outcomes of change efforts In Part II Dr Sarason revisits the text and the issues 25 years after the original publication As he explains in his preface to him the word crisis means a point in time when a dangerous situation contains conflicting forces of an intensity or seriousness that in the near term will be dramatically altered depending on which forces win out When I wrote the book a quarter century ago I did not regard our schools as in crisis though my intuition was that a crisis would come sooner or later It has in my opinion come Believing that what happens in our cities and our schools will determine the fate of our society Dr Sarason is deeply concerned that the reform arena is being manipulated by forces that are at best untroubled by and at worst intent on the dismantling of the public school system That coupled with his fear that even the system's defenders are not focusing on the real issues has infused Dr Sarason's return to the topic of educational change with a great sense of urgency The important things he has to say will be welcomed by all who truly care about the state of the public schools that America's children attend

Teaching, Tenure, and Collegiality Mary K. Chang,2022-02-01 Teaching Tenure and Collegiality espouses the concept of relationality the idea that people's activities necessarily emerge through contextual engagement with others as an alternative to the publish or perish ethos in higher education Building on research by comparative philosophers Mary K Chang constructs a concept of Confucian relationality and engages it to question universities increasing reliance on market oriented metrics to determine their strategic directions and gauge faculty productivity Using a process oriented approach

that features change the embodied connectedness of people and the extensive impact of personal cultivation Chang situates higher educational institutions as continually constructed by people's actions in ways that cannot be wholly described or quantified and need not be. Values are powerful in educational contexts because they direct how administrators, faculty, and students focus limited energy. Teaching, Tenure, and Collegiality reevaluates what universities normatively value and offers a holistically expansive view that positions faculty as experts and learners whose activity is inseparable from the contexts constructed by the relationships from which they emerge.

*Quantum Cosmology And Baby Universes: Proceedings Of 7th Jerusalem Winter School* Sydney Coleman, James B Hartle, Tsvi Piran, Steven Weinberg, 1991-08-12

The subject of Quantum Cosmology is concerned with providing a quantum mechanical description of the universe as a whole and within that description to constructing a theory of the universe's initial condition whose predictions can be compared with observation. The recent progress in this area has profound implications for physics at all scales. The lectures at this School describe these theories and their implications. They cover basic quantum mechanics of cosmology, proposals for theories of initial conditions, and their application to the prediction of the large-scale features of our universe. A special emphasis of the School is the implication of topological fluctuations of spacetime, wormholes, baby universes, for the observed coupling constants of the low-energy interactions of elementary particles and as a potential explanation for the vanishing of the cosmological constant.
