Andean Archaeology I William Harris Isbell, Helaine Silverman, 2002-06-30 Study of the origin and development of civilization is of unequalled importance for understanding the cultural processes that create human societies Is cultural evolution directional and regular across human societies and history or is it opportunistic and capricious Do apparent regularities come from the way investigators construct and manage knowledge or are they the result of real constraints on and variations in the actual processes Can such questions even be answered We believe so but not easily By comparing evolutionary sequences from different world civilizations scholars can judge degrees of similarity and difference and then attempt explanation Of course we must be careful to assess the influence that societies of the ancient world had on one another the issue of pristine versus non pristine cultural development see discussion in Fried 1967 Price 1978 The Central Andes were the locus of the only societies to achieve pristine civilization in the southern hemisphere and only in the Central Andes did non literate non written language civilization develop It seems clear that Central Andean civilization was independent on any graph of archaic culture change Scholars have often expressed appreciation of the research opportunities offered by the Central Andes as a testing ground for the study of cultural evolution see e g Carneiro 1970 Ford
