Gene and Environment Interactions in Neurodevelopmental Disorders Lorenzo More, Carmem Gottfried, Patricia Pelufo Silveira, 2022-04-25

Intelligence, Heredity and Environment Robert J. Sternberg, Elena L. Grigorenko, 1997-01-28 The debate over nature versus nurture in relation to intelligence is not as clearly drawn as it was ten years ago when geneticists claimed that intelligence is innate while environmentalists claimed that culture is the major determining factor. Although the debate has not been resolved, it has been significantly refined. Robert Sternberg and Elena Grigorenko address the roles and interaction of nature and nurture in Intelligence, Heredity, and Environment. This book provides a comprehensive, balanced current survey of theory and research on the origins and transmission of human intelligence. The book is unique in the diversity of viewpoints it presents and its inclusion of the very most recent theories and findings. It highlights the search for genes associated with specific cognitive abilities, interactionist theories, cultural relativism, educational strategies, developmental perspectives, and fallacies of previous intelligence research.

Environmental Factors, Genes, and the Development of Human Cancers Deodutta Roy, M. Tevfik Dorak, 2010-09-11 Cancer is a complex disease. Only 5-10% of human cancers are hereditary in nature. Many of us think of environmental agents when we think of carcinogens. The environment includes all that surrounds us, and environmental influences include not only chemical, physical, and biological toxicants but also diet and lifestyle. In this broadest sense, the environment contributes substantially in the development of human cancer. This book will describe how environment contributes to malignant transformation, leading to profound changes in the genetic and signaling networks that control the functioning of the cell. It will critically discuss the understanding of the effects of environment on the development, progression, and metastasis of cancer with current knowledge of the signaling networks that support functioning of transformed human cells. Genes and environmental factors that influence the origins of cancer are not necessarily the same as those that contribute to its progression and metastasis. Susceptibility gene variants for each specific cancer are being identified with emerging evidence of gene-environment interaction. Gene-environment interactions will be discussed through each specific cancer-based approach to address the question of how genetic variations can influence susceptibility to the individual type of cancer. It will also highlight and summarize epigenetic changes that increase the risk for susceptibility to a particular type of cancer, particularly in the presence of specific environmental factors. Thus, this book will contain chapters from the world's experts focused on the current evidences that support the role of environment in the cancer etiology and in the growth of malignant lesions and discuss who may be susceptible to environmental influences.

Fish,2013-05-13 In recent years reported racial disparities in IQ scores have been the subject of raging debates in the behavioral and social sciences and education What can be made of these test results in the context of current scientific knowledge about human evolution and cognition Unfortunately discussion of these issues has tended to generate more heat than light Now the distinguished authors of this book offer powerful new illumination Representing a range of disciplines psychology anthropology biology economics history philosophy sociology and statistics the authors review the concept of race and then the concept of intelligence Presenting a wide range of findings they put the experience of the United States so frequently the only focus of attention in global perspective They also show that the human species has no races in the biological sense though cultures have a variety of folk concepts of race that there is no single form of intelligence and that formal education helps individuals to develop a variety of cognitive abilities Race and Intelligence offers the most comprehensive and definitive response thus far to claims of innate differences in intelligence among races Infancy Lisa

In vivo Cell Biology of Cerebral Cortical Development and Its Related Neurological Disorders: Cellular Insights into Neurogenesis and Neuronal Migration Takeshi Kawauchi, Margareta Nikolić, Yoko Arai, 2016-09-21 The brain consists of a complex but precisely organized neural network which provides the structural basis of higher order functions Such a complex structure originates from a simple pseudostratified neuroepithelium During the developing mammalian cerebral cortex a cohort of neural progenitors located near the ventricle differentiates into neurons and exhibits multi step modes of migration toward the pial surface Tight regulation of neurogenesis and neuronal migration is essential for the determination of the neuron number in adult brains and the proper positioning of excitatory and inhibitory neurons in a specific layer respectively In addition defects in neurogenesis and neuronal migration can cause several neurological disorders such as microcephaly periventricular heterotopia and lissencephaly Recent advances in genetic approaches to study the developing cerebral cortex as well as the use of a number of novel techniques particularly in vivo electroporation and time lapse analyses using explant slice cultures have significantly increased our understanding of cortical development These novel techniques have allowed for cell biological analyses of cerebral cortical development in vivo or ex vivo showing that many cellular events including endocytosis cell adhesion microtubule and actin cytoskeletal regulation neurotransmitter release stress response the consequence of cellular crowding physical force dynamics of transcription factors midbody release and polarity transition are required for neurogenesis and or neuronal migration The aim of this research topic is to highlight molecular and cellular mechanisms underlying cerebral cortical development and its related neurological disorders from the cell biological point of views such as cell division cell cycle regulation cytoskeletal organization cell adhesion and membrane trafficking The topic has been organized into three chapters 1 neurogenesis and cell fate determination 2

Brian Howe,J.C.
