

Objectives: To find the multiplicative inverse of a matrix
To use the multiplicative inverse of a matrix to solve a system of equations

FOCUS

Cryptographers use a variety of schemes for encoding messages. A simple substitution cipher was presented in Lesson 1.4. To ensure security of sensitive information, a cryptographer may also use matrix operations to encode messages.

A matrix-based cryptography system will usually replace a group of two or three letters in a row by an equal number of letters in the encoded message. By using matrix multiplication in the encoding process, an individual letter can be encoded as a different letter in different parts of the coded message. Such ciphers are designed to be difficult to decode since they require the use of the *inverse* of the encoding matrix. During World War II, Allied analysts such as Alan Turing (1912–1954) were able to break German codes produced by the Enigma machine using sophisticated decoding techniques.

Recall that the product of an identity matrix with any matrix A of equal order is the matrix A , that is, $AI = A = IA$. When the product of two square matrices A and B is the identity matrix, $AB = BA = I$, then A and B are *multiplicative inverses* of one another. The notation A^{-1} is used to denote the multiplicative inverse of matrix A . Thus, $B = A^{-1}$ and $A = B^{-1}$. Note that only square matrices can have multiplicative inverses. *Why?*

Example 1 Show that matrix B is the multiplicative inverse of matrix A .

$$A = \begin{bmatrix} 4 & 3 \\ 3 & 2 \end{bmatrix} \text{ and } B = \begin{bmatrix} -2 & 3 \\ 3 & -4 \end{bmatrix}$$

$$AB = \begin{bmatrix} 4 & 3 \\ 3 & 2 \end{bmatrix} \begin{bmatrix} -2 & 3 \\ 3 & -4 \end{bmatrix} = \begin{bmatrix} -8 + 9 & 12 - 12 \\ -6 + 6 & 9 - 8 \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$BA = \begin{bmatrix} -2 & 3 \\ 3 & -4 \end{bmatrix} \begin{bmatrix} 4 & 3 \\ 3 & 2 \end{bmatrix} = \begin{bmatrix} -8 + 9 & -6 + 6 \\ 12 - 12 & 9 - 8 \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

Since $AB = BA = I$, then A and B are inverses of one another. Thus,

$$A^{-1} = \begin{bmatrix} -2 & 3 \\ 3 & -4 \end{bmatrix} \text{ and } B^{-1} = \begin{bmatrix} 4 & 3 \\ 3 & 2 \end{bmatrix}.$$

Over recent decades an abundance of reports have established that significant difficulties are experienced with the development of requirements in software projects. Traditionally requirements are documented prior to development remaining fixed with little scope for subsequent change. However for competitive domains change to initial expectations frequently occurs and should be accommodated to increase the likelihood of project success. Agile Methods AMs recognise this creating shorter development cycles and increased customer involvement thus contributing toward higher levels of adaptability for changing requirements. However despite widespread adoption problems still remain as considerable difficulty exists in managing negotiation between interdisciplinary stakeholder groups. Specific problems include difficulty achieving a collaborative approach early detection and resolution of requirements conflict and limited access to suitable stakeholders also contributes toward developers not fully understanding the domain. In response to these challenges this book has been written to address the inclusion of input from critical stakeholders on software development projects. This is achieved by utilizing Home Care Systems HCS as an exemplar for Dynamically Adaptive Systems DAS illustrating how AMs can be extended to better suit the desirable characteristics for an evolutionary Requirements Engineering RE approach to be developed. The findings from multiple studies both academic and industry based inform the development of a novel evolutionary framework called OpenXP to improve the facilitation of agile requirements elicitation in complex business domains. OpenXP provides the Agile Business Analyst with a practical solution to the strategic consolidation of multiple diverse viewpoints in developing a representative perspective of the overall project goal. Specifically this novel approach introduces a more participatory elicitation process extending hands on support for prioritization decision making and the provision of an informative workspace including upper level business context needed for developing user stories. The OpenXP framework is a three phased solution consisting of nine specific steps linked with four broader facets. Each facet is then responsible for implementing one or more strategic functions that comprise Stakeholder Coordination Business and IT Alignment Effective Communication Adaptability Integration on agile software projects.

Thermodynamics of Solutions Eli Ruckenstein,Ivan L. Shulgin,2009-06-17 This book consists of a number of papers regarding the thermodynamics and structure of multicomponent systems that we have published during the last decade Even though they involve different topics and different systems they have something in common which can be considered as the signature of the present book First these papers are concerned with difficult or very nonideal systems i e systems with very strong interactions e g hyd gen bonding between components or systems with large differences in the partial molar v umes of the components e g the aqueous solutions of proteins or systems that are far from normal conditions e g critical or near critical mixtures Second the conventional th modynamic methods are not sufficient for the accurate treatment of these mixtures Last

but not least these systems are of interest for the pharmaceutical biomedical and related industries. In order to meet the thermodynamic challenges involved in these complex mixtures we employed a variety of traditional methods but also new methods such as the fluctuation theory of Kirkwood and Buff and ab initio quantum mechanical techniques. The Kirkwood Buff KB theory is a rigorous formalism which is free of any of the approximations usually used in the thermodynamic treatment of multicomponent systems. This theory appears to be very fruitful when applied to the above mentioned difficult systems.

In response to the COVID 19 pandemic, many educational institutions implemented social distancing interventions such as initiating closure, developing plans for employees to work remotely and transitioning teaching and learning from face-to-face classrooms to online environments. The abrupt switch to online teaching and learning for the most part has been a massive change for administration, faculty and students at traditional brick-and-mortar universities and colleges, as concerns regarding the pedagogical soundness of this mode of delivery remain among some stakeholders. Not only that, but the switch has also revealed the inequities in the system when it comes to the types of students universities serve. It is important as institutions move forward with online instruction that consideration be made about all students and what policies and strategies need to be put into place to help support and meet the needs of all constituents now or when unprecedented situations arise. The only way this can be done is by documenting the experiences through the eyes of faculty who were at the frontline of providing instruction and advising services to students. The *Handbook of Research on Inequities in Online Education During Global Crises* brings to light the struggles faculty and students faced as they were required to switch to online education during the global COVID 19 health crisis. This crisis has revealed inequities in the educational system as well as the specific effects of

inequities when it comes to learning online and the chapters in this book provide information to help institutions be better prepared for online education or remote learning in the future While highlighting topics such as new educational trends remote instruction diversity in education and teaching and learning in a pandemic this book is ideal for in service and preservice teachers administrators teacher educators practitioners stakeholders researchers academicians and students interested in the inequalities within the educational systems and the new policies and strategies put in place with online education to combat these issues and support the needs of all diverse student populations *Telemedicine and Electronic Medicine* Halit Eren, John G.
