Raksin, 2022-09-01 This book reviews the common clinical scenarios that might trigger emergent consultation for neurosurgical intervention with attention to key components of the clinical interview and exam, optimal diagnostic evaluation, indications for and the goals of operative intervention, perioperative considerations, and strategies for complication mitigation. This is not a surgical atlas but rather a road map for the journey to the operating room door. The intent is to establish a systematic evidence-based action plan for the patient presenting in neurologic crisis. Each chapter opens with a relevant case vignette and then unfolds through uniform sections to tell the story of how one might approach the disease entity in question from initial request for consultation to definitive management, highlighting steps of the decision making process. What are the highest yield questions to ask during a focused interview? What are the most pertinent objective exam findings? What is the proper differential diagnosis? What is the most appropriate and efficient plan for diagnostic

evaluation with respect to laboratories and imaging Does this patient have an indication for emergent or urgent neurosurgical intervention If so what is the goal of that intervention What are the most common potential complications of the proposed procedure and what steps might be taken to mitigate those risks Each chapter is punctuated by 3 5 teaching pearls summarizing these key elements The overall goal is to create a framework for assessment that might be applied in the emergency department the trauma bay or the ICU when a neurologic emergency arises The scope of the text encompasses not only cranial and spinal trauma but also entities such as shunt failure stroke aneurysmal subarachnoid hemorrhage pituitary apoplexy cauda equina syndrome and central nervous system infection that might require time sensitive intervention An additional section addresses issues requiring emergent neurosurgical response in the ICU setting including sudden neurologic worsening status epilepticus and abnormal clotting coagulopathy The text will not only serve as a valuable resource for those preparing to take the oral board exam but will also provide a targeted refresher for clinicians taking general neurosurgical call in the community as well as an educational reference for mid level practitioners and those in training who are serving as first responders on behalf of a neurosurgical service
