Preventing Biological Warfare The Failure Of American Leadership:

Preventing Biological Warfare Malcolm Dando, 2002-05-10 The Biological and Toxin Weapons Convention entirely prohibits biological warfare but it has no effective verification mechanism to ensure that the 140 plus States Parties are living up to their obligations From 1995 2001 the States Parties attempted to negotiate a Protocol to the Convention to remedy this deficiency On 25 July 2001 the United States entirely rejected the final text which would probably have been acceptable to most other states The book investigates how this disaster came about and the potential consequences of the failure of American leadership

Preventing a Biochemical Arms Race Alexander Kelle, Kathryn Nixdorff, Malcolm Dando, 2012-10-31 Preventing a Biochemical Arms Race responds to a growing concern that changes in the life sciences and the nature of warfare could lead to a resurgent interest in chemical and biological weapons CBW capabilities By bringing together a wide range of historical material and current literature in the field of CBW arms control the book reveals how these two disparate fields might be integrated to precipitate a biochemical arms race among major powers rogue states or even non state actors It seeks to raise awareness among policy practitioners the academic community and the media that such an arms race may be looming if developments are left unattended and to provide policy options on how it and its devastating consequences could be avoided After identifying weaknesses in the international regime structures revolving around the Biological Weapons and Chemical Weapons Conventions it provides policy proposals to deal with gaps and shortcomings in each prohibition regime individually and then addresses the widening gap between them

Neuroscience and the Future of Chemical-Biological Weapons Malcolm Dando, 2015-07-21 During the last century advances in the life sciences were used in the development of biological and chemical weapons in large scale state offensive programmes many of which targeted the nervous system This study questions whether the development of novel biological and chemical neuroweapons can be prevented as neuroscience progresses
