

Prevention of neural tube defects

INTEGRATED MANAGEMENT OF PREGNANCY AND CHILDBIRTH (IMPAC)

The standard

All women, from the moment they begin trying to conceive until 12 weeks of gestation, should take a folic acid supplement. Women who have had a fetus diagnosed as affected by a neural tube defect (NTD) or have given birth to a baby with NTD should receive information on the risk of recurrence, be advised on the protective effect of periconceptional¹ folate supplementation and be offered high-dose supplementation.

Aim

To prevent NTDs and other congenital malformations in the fetus.

Requirements

- ☐ A national policy and locally adapted guidelines on folic acid supplementation are available and are correctly implemented.
- ☐ Health providers are competent in the following areas: the risk of folic acid deficiency; the benefits of folic acid supplementation before conception and during early pregnancy; correct supplement dosages; and the importance of advising pregnant women to take folic acid before conception and during the first trimester of pregnancy.
- ☐ Folic acid is available and affordable to women.
- ☐ A method to record the preventive treatment provided is in place.
- ☐ Health education activities are conducted to raise the awareness of women and of the community on the importance of taking folic acid supplements in the periconceptional period.

Applying the standard

Health providers in antenatal and family planning clinics must:

- Advise women trying to conceive to take a dose of 400 µg folic acid daily, starting two months before the planned pregnancy.
- Advise women who have not been supplementing their diet and who suspect themselves to be pregnant to begin taking 400 µg folic acid daily and to continue until they are 12 weeks pregnant.
- Counsel pregnant women who have previously had a baby with NTD or who have diabetes or who are under anticonvulsant treatment about the increased risk of a future baby being affected, and advise them to take 5 mg folic acid daily and increase their food intake of folate.
- Record the treatment given in the maternal card.
- Record cases of NTD, in accordance with local guidelines, in the logbook and in the woman's record.

¹ Before pregnancy and in the first three months of pregnancy.

Prevention Of Neural Tube Defects:

Prevention of Spina Bifida and Other Neural Tube Defects John Dobbing,1983 Tube defect prevention in high incidence areas and epidemiological evidence concerning the cause of neural tube defects Two additional topics appended to the text discuss a regional study of maternal diet and nutrition during early pregnancy and following delivery and the economic aspects associated with neural tube defect prevention Tabular and graphical presentations of data and literature citations are provided throughout the text *Neural Tube Defects* Kannan Lakshmi Narasimhan,2012-03-16 The book Neural Tube Defects Role of Folate Prevention Strategies and Genetics has several eminent international authors and the book is a resource for anybody who is interested in this very important subject The authors are distinguished and the chapters are a product of their extensive research **The Prevention of Neural Tube Defects with Folic Acid** ,1978 **Neural Tube Defects** Diego F. Wyszynski,2005-10-13 Neural tube defects affect about 4000 pregnancies each year and are thus among the most common of severe birth defects Prenatal diagnosis can now detect about 70% of neural tube defects but the tests produce many false positives so the question is under what circumstances should they be recommended This comprehensive volume the collective knowledge of more than 55 experts in the field provides lucid and authoritative discussions on this topic as well as on a wide variety of theoretical experimental and clinical issues **Prevention of Neural Tube Defects** Karin M. van der Pal-de Bruin,2002 **Neural Tube Defects** Alberich Klein,2013 Neural Tube Defects NTDs are congenital malformations of the central nervous system caused by partial or complete failure of the neural tube to close within 28 days of conception They represent the second most frequent cause of congenital abnormality In this book the authors discuss the prevalence pathogenesis and prevention of neural tube defects Topics include preconception folic acid as a primary prevention tool for NTD and its risk assessment understanding and preventing folic acid resistant neural tube defects knowledge of the cellular mechanisms responsible for normal neural tube formation in comprehending and preventing NTDs developmental delay in interneuron motor neuron sensory tract and synapse formation in chick spina bifida and an examination of whether neural tube defects lead to structural alterations in the urinary and genital organs in human fetuses *Prevention of Neural Tube Defects* Karin Maria van der Pal-de Bruin,2002 **Current Concepts in Spina Bifida and Hydrocephalus** Carys M. Bannister,1991 Over the past decade there have been great advances in the prognosis and treatment of neural tube defects New surgical techniques can increase the life expectancy and improve the quality of life of affected individuals while recent research into vitamin supplementation offers the prospect of hydrocephalus and spina bifida becoming largely a thing of the past The new study brings together these medical advances and also deals with the practical issues which every specialist student family doctor and even the worried parent needs to know For maximum clarity the chapters are arranged chronologically dealing with all the problems that may occur from the prenatal period to adolescence **Folic Acid Supplementation for the Prevention of Neural Tube Defects** Tracy A. Wolff,Catherine Takacs

Witkop, Therese Miller, Shamsuzzoha B. Syed, U.S. Preventive Services Task Force, 2009

BACKGROUND Neural tube defects (NTDs) are among the most common birth defects in the United States

PURPOSE To update the evidence on folic acid supplementation in women of childbearing age for the prevention of neural tube defects in their offspring

DATA SOURCES MEDLINE and Cochrane Library searches from January 1995 through November 2007

recent systematic reviews

reference lists of retrieved articles and expert suggestions

STUDY SELECTION English language studies were selected to answer the following two questions

Does folic acid supplementation in women of childbearing age reduce the risk of a pregnancy affected by a neural tube defect

Does folic acid supplementation in women of childbearing age increase the risk of any harmful outcomes for either the woman or the infant

The following study types were selected for potential benefits of folic acid

randomized controlled trials (RCTs)

case control studies

cohort studies

systematic reviews and meta analyses for potential harms of folic acid

RCTs

case control studies

systematic reviews

meta analyses and large observational studies

DATA EXTRACTION All studies were reviewed abstracted and rated for quality using predefined U.S. Preventive Services Task Force criteria

DATA SYNTHESIS Four observational studies reported benefit in reduction of risk of NTD associated with folic acid containing supplements

Differences in study type and methods prevent the calculation of a summary of the reduction in risk

The one included study on harms reported that the association of twinning with folic acid intake disappeared after adjusting for in vitro fertilization and for underreporting of folic acid intake

LIMITATIONS There is limited evidence on dose

We found no evidence on the potential harm of masking vitamin B12 deficiency in women of childbearing age

Our search focused on NTDs and therefore does not provide a comprehensive review of the effects of folic acid on all possible outcomes

CONCLUSIONS New observational evidence supports previous RCT evidence that folic acid containing supplements reduce the risk of NTD affected pregnancies

The association of folic acid use with twin gestation may be confounded by fertility interventions including ovulation stimulation and in vitro fertilization

Folic Acid for the Prevention of Neural Tube Defects Motherisk Program, 1995

Prevention of Neural-tube Defects with Folic Acid Supplementation Wade Mitchell Junker, 2001

Prevention of Neural Tube Defects Caitlin Wise, 2004

The Prevention of Neural Tube Defects Barbara F. Crandall, Mary Agnes Burniston Brazier, Provides a description of neural tube defects (NTDs) provided by the Agency for Toxic Substances and Hazardous Waste in Silver Spring, Maryland

Notes that NTDs are birth defects occurring in the brain or spinal cord

Includes information on how to prevent a NTD pregnancy, what people are at greater risk, and describes the need for folic acid

Folic acid and the prevention of neural tube defects; report from an expert advisory group June Chair Lloyd, 1992. Vitamins in the prevention of human diseases Wolfgang Herrmann, Rima Obeid, 2011-02-28. This book provides up to date knowledge on the role of water and fat soluble vitamins in the prevention of human diseases. The vitamins are essential food constituents with magnificent biological effects, therefore linking our biology to our lifestyle and environment. One-sided nutrition, smoking, alcohol, genetic factors and even geographical origin interfere with our dietary intake of the vitamins. Therefore it is not wondering that insufficient vitamin intake can impact our health and contribute significantly to the development of numerous diseases. The book offers expert reviews and judgements on the role of vitamins in our health and the link between vitamins deficiency and disease conditions at different life stages. Having knowledge about the association of vitamins and disease as well as keeping track on the patient's vitamin status has become increasingly important to physicians, clinical chemists, epidemiologists, specialists in nutrition, health professionals, researchers and students who are interested in this area. Recent development in laboratory methods has helped making many issues in this field quantitative.
