Preventive Medicine Between Obligation And Aspiration:

Preventive Medicine between Obligation and Aspiration M.F. Verweij, 2013-04-17 Preventive Medicine between Obligation and Aspiration is a study of ethical questions regarding mass screening vaccination and health policy programmes. These interventions aim to enhance public health but may also constrain personal autonomy and cause harm and influence our moral views. So far these issues have hardly been subject to systematic ethical analysis. This study aims to fill this gap by providing an overview of moral problems in preventive medicine and by explicating norms for good practice. Throughout the book it is argued that some moral concerns about prevention, namely concerns about medicalization, cannot be adequately grasped in terms of strict and binding moral norms. Various moral concepts and types of norms beyond obligation are explored and developed in order to give practical meaning to these rather vague concerns. In this way the book contributes to applied ethics as well as to ethical theory. It is of interest to professionals in public health and preventive medicine and to scholars in applied ethics and moral philosophy.

The Ethics of Screening in Health Care and Medicine Niklas Juth,Christian Munthe,2011-09-20 Medical or health oriented screening programs are amongst the most debated aspects of health care and public health practices in health care and public health ethics as well as health policy discussions In spite of this most treatments of screening in the research literature restrict themselves to isolated scientific aspects sometimes complemented by economic analyses or loose speculations regarding policy aspects At the same time recent advances in medical genetics and technology as well as a rapidly growing societal focus on public health concerns inspires an increase in suggested or recently started screening programs This book involves an in depth analysis of the ethical political and philosophical issues related to health oriented screening programs It explores the considerations that arise when health care interacts with other societal institutions on a large scale as is the case with screening What values may be promoted or compromised by screening programs What conflicts of values do typically arise both internally and in relation to the goals of health care on the one hand and the goals of public health and the general society on the other What aspects of screening are relevant for determining whether it should be undertaken or not and how it should be organised in order to remain defensible What implications does the ethics of screening have for health care ethics as a whole These questions are addressed by applying philosophical methods of conceptual analysis as well as models and theories from moral and political philosophy medical ethics and public health ethics to a large number of ongoing and proposed screening programs which makes this book the first comprehensive work on the ethics of screening Analyses and suggestions are made that are of potential interest to health care staff medical researchers policy makers and the general public

keen understanding of a wide range of topics and figures in both medicine and philosophy but he manages to bring them together in an innovative manner that convincingly demonstrates how deeply these two significant fields can be and in the end must be mutually enlightening Medicine Svenaeus suggests reveals deep but rarely explicit themes whose proper comprehension invites a careful phenomenological and hermeneutical explication Certain philosophical approaches on the other hand specifically Heidegger's phenomenology and Gadamer's hermeneutics are shown to have a hitherto unrealized potential for making sense of those themes long buried within Western medicine Richard M Zaner Ann Geddes Stahlman Professor of Medical Ethics Vanderbilt University **Autonomy and Human Rights in Health Care** David N.

When I completed my book Islamic Medical Ethics in the Twentieth Century I was aware that I had omitted certain topics that I would have to return to One of these was the ethical treatment of disabilities and the disabled and of handicaps and the handicapped Since responses to burning medical dilemmas within the wide field of medical ethics was the main focus of that book it addressed ethical aspects of the doctor-patient relationship and contemporary Islamic debates on issues such as birth control and abortion artificial insemination organ transplants postmortem exa nations and euthanasia The main source material was 20th century fatwas legal responses issued by various Middle Eastern muftis In this book I now wish to survey attitudes to the disabled and their disabilities as evinced by selected Sunni and Shi'i legal compilations throughout 1400 years of scholarly Islamic activity but also through contemporary fatwas The sources used for this book are a selection of medieval as well as modern legal writings medical books and articles in Arabic books and articles on medicine from an Islamic religious point of view Prophetic medicine and the Qur'an and medicine I have scrutinized all these for their consideration of people with disabilities and for the behavioral or social adjustments these people were offered mainly through legal rulings **Genetic Democracy** Veikko

currently few European texts which address the issues involved in a theoretical and systematical manner Genetic Democracy has been written from the viewpoint of social and political philosophy rather than that of traditional bioethics There is a clear need for a throughout and authoritative philosophical and ethical analysis of the issues involved in genetic research and gene technology The book will appeal to philosophers social scientists genetics professionals policy makers academics industrial organisations and human rights organisations as well as university students and legal scholars The book will have a broad appeal across Europe Asia and America since many states are currently considering policy responses to many of the practices discussed in the books e g human biobanks **Giving Death a Helping Hand** Dieter Birnbacher, Edgar Dahl, 2008-01-22

A Critique of the PVS Concept* Peter

McCullagh, 2006-01-17 Having been originally introduced as a term to facilitate discussion of a specific group of patients regarded as entering a state of unawareness following coma the Persistent Vegetative State PVS has established itself as an apparently discrete medical condition with clear cut implications for ethicists and lawyers that exceed any scientifically based understanding As a consequence of this upgrading conclusions drawn about the status and hence the management of this uncommon condition have been increasingly extended to other patients with much more common forms of disability This book traces the origins of prevailing perceptions about PVS and submits these to critical examination In doing this it comes to the conclusion that inadequate attention has been paid to acknowledging what is not known about affected individuals and that assumptions have consistently come to be traded as facts Re examination of the basis of the PVS and the adoption of a more scientific approach is long overdue and is owed to the community at large which has generally been provided by many medical practitioners with a dumbed down account of the condition The book will be of interest to philosophers medical graduates and neuroscientists but is also intended to remain accessible to the general reader with an interest in the wider implications of trends in medical thinking for attitudes towards many classes of patient It has an extensive bibliography and will be of specific interest to bioethicists and lawyers with professional interests in PVS Efficiency, Justice and Care Yvonne Denier, 2007-03-06 Since the 90 s issues of scarcity priority setting and rationing lie at the centre of most current

debates on health care These are pressing issues one way or another limits have to be set As such the question of what is involved in just health care becomes much more complex This complexity can be represented as an inconsistent triad a set of three propositions of which any two are compatible but which together form a contradiction In the case of health care the three rival values are social efficiency justice and decent quality care It seems to be that we can have any two but not all three Essentially the central question is the following how best to square the proverbial welfare circle How can resources be matched to needs or needs to resources in socially acceptable and economically feasible ways This book attempts to answer the question how health care can be incorporated into a comprehensive theory of justice while realising an acceptable balance between efficiency justice and care Globalization and Health Belinda Bennett, George F. Tomossy, 2006-06-21

Within contemporary society globalization has emerged as a key concern at the centre of ethical legal and policy debates relating to health care Conflicts between public interests and individual rights the challenge of regulating health professionals and access to health services and the effects of a global market all feature prominently in these discussions As a result of globalization these issues can no longer be understood solely within the political boundaries that define traditional notions of individuals and communities Rather solutions demand a global conception of rights and obligations which in turn requires new approaches to health policy formulation and a reevaluation of existing ethical and legal frameworks In essence the impact of globalization on human health is testing the robustness of modern regulatory systems legal doctrines and ethical paradigms PUBLIC HEALTH DEVELOPING GLOBAL CONCERNS The interconnectedness of the global economy presents new challenges in public health While globalization has facilitated improvements in health care it has also created new hazards and avenues for the exploitation of vulnerable persons It is becoming increasingly apparent that both national and international responses are required Indeed as the chapters in this section convey public health is rightly a global concern Globalization has led to a sharing of both risks and responsibilities in public health Belinda Bennett reminds us of the ease with which infectious diseases can spread within the global community given the speed of modern travel and trade

The Christian Religion and Biotechnology George P. Smith, 2005-06-18 Religion is a dominant force in the lives of many Americans It animates challenges directs and shapes as well the legal political and scientific agendas of the new Age of Biotechnology In a very real way religion biomedical technology and law are epistemologically different Yet they are equal vectors of force in defining reality and approaching an understanding of it Indeed all three share a synergetic relationship for they seek to understand and improve the human condition This book strikes a rich balance between thorough analysis in the body anchored in sound references to religion law and medical scientific analysis and a strong scholarly direction in the end notes It presents new insights into the decision making processes of the new Age of Biotechnology and shows how religion law and medical science interact in shaping directing and informing the political processes This volume will be of interest to both scholars and practitioners in the fields of religion and theology philosophy ethics family law science medicine political

science and public policy and gender studies It will serve as a reference source and can be used in graduate and undergraduate courses in law medicine and religion *Clinical Bioethics* C.
