Marshall Monroe Kirkman

Private Property And Political Control:

Private Property and Political Control Foundation of Economic Education, 1992-10 *The Political Institution of Private Property* Itai Sened, 1997-07-24 In this book Itai Sened examines the political institution of property and other individual rights His argument is that the foundation of such rights is to be found in the political and economic institutions which grant and enforce them and not in any set of moral principles or nature The book further argues that individual rights are instituted through a political process and not by any hidden market forces The origin of rights is placed in a social contract that evolves as a political process in which governments grant and protect property and other individual rights to constituents in return for economic and political support Extending neo institutional theory to the subject and using a positive game theoretic approach in its analysis this book is an original contribution to scholarship on the evolution of rights

The Politics of Private Property Simone Knewitz, 2021-04-21 Located at the intersections of law and culture *The Politics of Private Property* provides a fresh perspective on the functions of private property within U S cultural discourse by establishing a long historical arch from the early nineteenth to the twenty first century The study challenges the assumption of an unquestioned cultural consensus in the United States on the subject of individual property rights instead mobilizing property as an analytical category to examine how social and political debates generate competing and contested claims to ownership The property narratives arising out of political conflicts the book suggests serve to naturalize the unequal social and economic structures and legitimize the hegemonic order which however remains to be shifting and subject to challenges Analyzing the property narratives at the heart of the U S American self conception *The Politics of Private Property* addresses the gap between the ideal of the U S as a universal middle class society characterized by a wide diffusion of property ownership and the actual social reality which is defined by unequal dissemination of wealth and race based structures of exclusion

Of Fears and Foes Jose V. Ciprut, 2001-09-30 At the end of the deadliest century known to mankind the world still finds itself mired in bloodshed In addition to formal inter state conflict we see an increase in other forms of organized violence including ethnic warfare terrorism civil conflict and internationally necessitated police actions Cornered by these powerful global forces nation states continue their quest for security Theirs is a search plagued by futility since the very meaning of the word security is being eroded by the pace and tenor of change in an evolving international environment more complex and confusing than ever The explanatory power of traditional notions of international security which has provided a cornerstone for international relations theory as a whole seems increasingly inadequate in helping to understand the makings of global security A novel approach is needed one that integrates discerning insights from the study of language history geography religion economics and technology with more traditional understandings of the workings of power on an international level and on an intranational scale *Of Fears and Foes* presents just this kind of innovative thinking by some of the most creative scholars working on these issues today Ciprut invites us to consider a fundamental reassessment of what

constitutes security and insecurity in an emerging global environment Federal Lands and Federal Regulation of Private Property United States. Congress. House. Committee on Resources. Subcommittee on National Parks, Forests, and Lands,1996 **Economy of rates; Private vs. government control** Marshall Monroe Kirkman,1896 *Civil Society: Between Concepts and Empirical Grounds* Liv Egholm,Lars Bo Kaspersen,2020-11-29 Examining the historical and social trajectories involved in the continuous development of civil society this volume reveals the contextual nature of the process Through empirical studies focusing primarily on Denmark and covering the period from 1849 to the present day it analyses the manner in which civil society has been practised and transformed over time Presenting a new theoretical framework informed by a relational and processual perspective the book sheds new light on familiar questions pertaining to civil society the production of its boundaries and spaces of action and the means by which these spaces can become causal factors A fresh intervention in the study of a concept that has been central in defining ideas of solidarity and the common good and to which researchers and politicians look for solutions to the great challenges of our time *Civil Society Between Concepts and Empirical Grounds* will appeal to scholars of sociology politics history and philosophy with interests in civil society

Emissions Trading Schemes Sanja Bogojevic,2013-07-04 Over the last four decades emissions trading has enjoyed a high profile in environmental law scholarship and in environmental law and policy Much of the discussion is promotional preferring emissions trading above other regulatory strategies without however engaging with legal complexities embedded in conceptualising scrutinising and managing emissions trading regimes The combined effect of these debates is to create a perception that emissions trading is a straightforward regulatory strategy imposable across various jurisdictions and environmental settings This book shows that this view is problematic for at least two reasons First emissions trading responds to distinct environmental and non environmental goals including creating profit centres substituting bureaucratic control of resources and ensuring regulatory compliance This is important as the particular purpose entrusted to a given emissions trading regime has as its corollary a particular governance structure according to which the regime may be constructed and managed and which trusts the emissions market the state and rights in emissions allowances with distinct roles Second the governance structures of emissions trading regimes are culture specific which is a significant reminder of the importance of law in understanding not only how emissions trading schemes function but also what meaning is given to them as regulatory strategies This is shown by deconstructing emissions trading discourses that is by inquiring into the assumptions about emissions trading as featuring in emissions trading scholarship and in debates involving law and policymakers and the judiciary at the EU level Ultimately this book makes a strong argument for reconfiguring the common understanding of emissions trading schemes as regulatory strategies and sets out a framework for analysis to sustain that reconfiguration Axis Rule in Occupied Europe Raphael Lemkin,2014 In this study Polish emigre Raphael Lemkin 1900 1959 coined the term genocide and defined it as a subject of international law Provided by publisher **Return of the**
