Psychiatry as Medicine A. Fried, Joseph Agassi, 1983-07-31 PREFACE This volume is a sequel to yet independent of our *Paranoia A Study in Diagnosis* Reidel Dordrecht and Boston 1976 Whereas our first book centered on diagnosis this centers on treatment In our first volume all discussions of nosology theory of illness and of treatment was ancillary to our discussion of diagnosis similarly all discussion of this volume dealing with nosology there is very little on diagnosis here is ancillary to our discussion of psychotherapy It is still our profoundest conviction that to speak of treatment without diagnosis is meaningless if not irresponsible since otherwise one does not know what one is talking about Hence our present study though it centers on theories of treatment links psychotherapy with psychopathology It is the rationale of psychotherapy which is of importance and the rationale dwells in this link We wish our present study to be self contained and understood by readers who are not familiar with our first book or with any specific literature Our discussion of medicine in general meaning

the rationale of therapy in general helps the uninitiated reader as well as the initiated we hope it certainly has helped us We did not see how else can we study a branch of medicine we felt the need for some idea of how medicine is supposed to work

Professionalism in Psychiatry Glen O. Gabbard, Laura Weiss Roberts, Holly Crisp-Han, Valdesha Ball, Gabrielle Hobday, Funmilayo Rachal, 2012-09-24 Physicians and psychiatrists typically see themselves as true professionals But in the past some displayed behavior far beneath the confines of professionalism including exploding at nurses not returning calls or conducting insensitive interactions with patients that was usually tolerated and seldom disciplined Today the rise of professionalism in medicine in general and psychiatry in particular has prompted a quiet revolution in how doctors are trained and how they are expected to behave in the workplace The Accreditation Council for Graduate Medical Education ACGME has now advanced professionalism to be one of the core competencies all emerging practitioners must have While almost all physicians believe in professionalism the movement toward making it a core competency has challenged doctors everywhere to accept the practice of monitoring observing and assessing what is not always welcome in a field where autonomy is so highly valued In *Professionalism in Psychiatry* the authors identify and expand on professional behaviors such as being a good team player being accountable pursuing improvement in an ongoing way and behaving compassionately toward patients and families The importance of treating all co workers with respect and of being attuned to the management of healthcare resources in a way that reflects fairness and integrity is also thoroughly reviewed Important features of this book are Tailoring professionalism principles from medicine to the unique features of psychiatry in order to enhance educators teaching and improve the behaviors of psychiatrists and residents in the work setting Development of guidelines for professionalism in cyberspace to provide psychiatrists with an ethical framework for dealing with patients in the online realm Discussion of the ethical principles that apply when academic departments approach donors Focus on cultural competency and empathy in an effort to improve patient care through greater understanding and sensitivity to ethnic racial gender and sexual orientation issues encountered in clinical practice Use of numerous clinical examples to articulate the new professionalism in psychiatry which illustrates the importance of going beyond one size fits all thinking *Professionalism in Psychiatry* is an important contribution toward beginning to characterize the ever evolving professional behaviors and clinical strategies of the contemporary psychiatrist and place them in a systematic framework

Psychoneurology 1 Norman B. Levy, 2013-06-29. Major

nephrological and psychological organizations have at best set aside only small portions of their programs for papers or panels devoted to the psychological aspect of patients with end stage renal disease. Thus the increased need for information concerning the psychological aspects of end stage renal disease has been met by occasional journal articles, professional peer discussions, small portions of national conferences and informal conversations and consultations with people with clinical and research experience in these areas. The First International Conference on Psychological Factors in Hemodialysis and Transplantation arose out of a need to have a forum in which the major people involved in treatment and research in this area could share their latest work among themselves and with the registrants. The initial encouragement for organizing such a conference came from the rank and file of nephrology social workers, nephrology nurses and liaison psychiatrists and psychologists. In early 1977 I had decided that I would make an effort to organize such a meeting and asked the two other individuals most closely identified with major research in this area, Atara Kaplan De Nour and Harry S Abram, to join me in planning this conference. With their support and suggestions concerning the program I embarked upon an attempt to raise financial backing for it. I was somewhat surprised to find that the many equipment and drug companies supporting nephrological conferences were not greatly interested in this one.
