Teaching Cybersecurity Daniel Shoemaker, Ken Sigler, Tamara Shoemaker, 2023-02-15 Let's be realistic here Ordinary K 12 educators don't know what cybersecurity is and could probably care less about incorporating it into their lesson plans Yet teaching cybersecurity is a critical national priority So this book aims to cut through the usual roadblocks of confusing technical jargon and industry stovepipes and give you the classroom teacher a unified understanding of what must be taught That advice is based on a single authoritative definition of the field In 2017 the three societies that write the standards for computing software engineering and information systems came together to define a single model of the field of cybersecurity It is based on eight building blocks That definition is presented here However we also understand that secondary school teachers are not experts in arcane subjects like software component human or societal security Therefore this book explains cybersecurity through a simple story rather than diving into execution details Tom a high school teacher and Lucy a middle school teacher are tasked by their district to develop a cybersecurity course for students in their respective schools They are aided in this by the Doc an odd fellow but an expert in the field Together they work their way through the content of each topic area helping each other to understand what the student at each level in the educational process has to learn The explanations are simple easy to understand and geared toward the teaching aspect rather than the actual performance of cybersecurity work Each chapter is a self contained explanation of the cybersecurity content in that area geared to teaching both middle and high school audiences The eight component areas are standalone in that they can be taught separately But the real value lies in the comprehensive but easy to understand picture that the reader will get of a complicated field

**Summer versus School** James Pedersen, 2015-01-22 As American educational reformers continue to find innovative ways to address the global achievement gap many experts seem to agree that

increasing instructional time is a viable option In addition to extending the school day some educational leaders have looked to modifying the traditional academic calendar to address some of the academic losses that occur when students have 8 10 weeks of summer vacation each year Re examining how students spend their summer vacation although considered by many to be a cultural taboo may be the answer to addressing global competition and decreasing the national achievement gap The need for a two month break from schools harkens back to a pre industrial time that no longer is pertinent for our students Although an answer may be staring us in the face are we willing to give up on the American tradition of summer vacation all in the name of reform and student success
