Roaring 90s A New History Of The Worlds Most Prosperous Decade:

The Roaring Nineties: A New History of the World's Most Prosperous Decade Joseph E. Stiglitz, 2011-02-07 How one of the greatest economic expansions in history sowed the seeds of its own collapse With his best selling *Globalization and Its Discontents* Joseph E Stiglitz showed how a misplaced faith in free market ideology led to many of the recent problems suffered by the developing nations Here he turns the same light on the United States The Roaring Nineties offers not only an insider s illuminating view of policymaking but also a compelling case that even the Clinton administration was too closely tied to the financial community that along with enormous economic success in the nineties came the seeds of the destruction visited on the economy at the end of the decade This groundbreaking work by the Nobel Prize winning economist argues that much of what we understood about the 1990s prosperity is wrong that the theories that have been used to guide world leaders and anchor key business decisions were fundamentally outdated Yes jobs were created technology prospered inflation fell and poverty was reduced But at the same time the foundation was laid for the economic problems we face today Trapped in a near ideological commitment to free markets policymakers permitted accounting standards to slip carried deregulation further than they should have and pandered to corporate greed These chickens have now come home to roost The paperback includes a new introduction that reviews the continued failure of the Bush administration s policies which have taken a bad situation and made it worse

[Social Classes and Political Order in the Age of Data](#) Georges Kotrotsios, 2022-09-28 Our lives are changing today but what is the single most important factor driving these changes This question is crucial because attempting to answer it can guide us to an understanding of the processes that are impacting our societies The answer will of course come from the historians of the future but there is already no

doubt that the advent of data is behind a radical shake up of our way of living Monetary assets infrastructure equipment and human labor all allow wealth to be created Data does too and it is reasonable to consider a new production factor in this regard data capital This book argues that this new production factor generates innumerable economic opportunities of a nature unthought of a mere twenty years ago These opportunities have led to the creation of a new social class composed of two subclasses data workers and data owners The emergence of this new class repositions existing classes including the traditional working class and the capitalist class creating strong divergences that threaten social cohesion What can we do to ensure cohesion and the proper functioning of society The book argues for the establishment of a regulatory framework and the institutions necessary if we are to open data up and where appropriate exchange and trade it all on a global scale In this regard the state today still playing its traditional role of framework setter and savior when crises loom can become an active economic player thus creating wealth for communities

Common Ground Jeremy Gilbert,2013-11-08 Under neoliberalism the cult of individualism reigns supreme forced upon us through culture media and politics it fatally limits our capacity to escape the current crisis of democratic politics In Common Ground Jeremy Gilbert asks us to reimagine the philosophical relationship between individuality collectivity affect and agency proposing a radically non individualist mode of imagining social life The book considers how opponents of neoliberal hegemony and of the individualist tradition in Western thought might protect collective creativity and democratic possibility Examination of the historical roots of individualism s Leviathan logic and fresh readings of theorists such as Hobbes Lazzarato Simondon Lyotard Laclau and Deleuze and Guattari force us to confront longstanding assumptions about the nature of the individual and of collectivity Exploration of this fundamental faultline in contemporary politics is accompanied by analysis of the different ideas and practices of collectivity from conservative notions of hierarchical and patriarchal communities to the politics of horizontality and the commons which lie at the heart of radical movements today Through an understanding of the philosophy shaping contemporary relations and disrupting hegemonic values we can re imagine the present moment

Growth Growth Growth Julian Cobbing,2024-04-11 *Growth Growth Growth* retells history as a succession of pivotal crises linked to economic growth Beginning with agriculture ten thousand years ago each crisis led to an impasse until human ingenuity devised a technical solution to fix it These solutions included the alphabet paper clocks guns the printing press the steam engine the petrol engine electricity nitrogen fertilizer and the computer Each solution however played a part in the next crisis Growth driven crises led to the world wars of the first half of the twentieth century including the atrocities of Stalin Hitler and Hiroshima The brief golden age of capitalism of the 1950s and 1960s gave way to the ultra corporate capitalism that in one variant or another is now the global economic system Julian Cobbing s lively account exposes the historical roots of our converging problems the destruction of the environment the massacre of other species the running down of oil reserves global heating and the nuclear threat to all of us This time there is no technical solution since we are devouring the Earth s finite resources Cobbing reminds us that we

are just one species in a planetary life system which could dispense with us if we are not needed [Working in the Service Sector](#) Gerhard Bosch, Steffen Lehndorff, 2004-06-01 The rise to prominence of the service sector heralded over half a century ago as the great hope for the twenty first century has come to fruition In many cases employment in the service sector now outnumbers that in manufacturing sectors and it is accepted that in all developed countries the service sector is the only one in which employment will grow in future The reasons for this is the subject of much controversy and debate the outcomes of which are not merely of academic interest but of decisive importance for economic policy and the quality of working and living conditions in future In order to examine these various arguments research teams from eight European countries worked together for three years on a comparative study of the evolution of service sector employment in EU member states They also investigated working and employment conditions in five very different service industries banking retailing hospitals IT services and care of the elderly in a number of countries and the results of their research are presented in this informative new collection of interest to students academics and researchers involved in all aspects of industrial economics **State Transformations in OECD Countries** H. Rothgang, Steffen Schneider, 2015-03-23 The democratic nation state of the post war era has undergone major transformations since the 1970s and political authority has been both internationalized and privatized The thirteen chapters of this edited collection deal with major transformations of governance arrangements and state responsibilities in the countries of the OECD world A unified conceptual and explanatory framework is used to describe trajectories of state change to explain the internationalization or privatization of responsibilities in the resource law legitimacy and welfare dimensions of the democratic nation state and to probe the state s role in the today s post national constellation of political authority As the contributions show an unravelling of state authority has indeed occurred but the state nevertheless continues to play a key role in emerging governance arrangements Hence it is not merely a victim of globalization and other driving forces of change [Who Counts?](#) Diane M. Nelson, 2015-11-05 In [Who Counts](#) Diane M Nelson explores the social life of numbers teasing out the myriad roles math plays in Guatemalan state violence economic exploitation and disenfranchisement as well as in Mayan revitalization and grassroots environmental struggles In the aftermath of thirty six years of civil war to count both numerically and in the sense of having value is a contested and qualitative practice of complex calculations encompassing war losses migration debt and competing understandings of progress Nelson makes broad connections among seemingly divergent phenomena such as debates over reparations for genocide victims Ponzi schemes and antimining movements Challenging the presumed objectivity of Western mathematics Nelson shows how it flattens social complexity and becomes a raced classed and gendered skill that colonial powers considered beyond the grasp of indigenous peoples Yet the Classic Maya are famous for the precision of their mathematics including conceptualizing zero long before Europeans Nelson shows how Guatemala s indigenous population is increasingly returning to Mayan numeracy to critique systemic inequalities with the goal of being counted in every sense of the word

Markets in Higher Education Pedro Teixeira, Ben B. Jongbloed, David D. Dill, Alberto Amaral, 2006-08-01 This volume presents the most comprehensive international discussion of the role of markets in higher education ever published. It reflects on both the political and economic implications of the rising trend towards introducing market elements in higher education. The book draws together many leading international scholars in the economic and policy analysis of higher education to explore different theoretical perspectives and present new empirical evidence on market mechanisms in higher education in several Western countries. The authors present a dispassionate and ideologically neutral view of the advantages and disadvantages of the introduction of market mechanisms in higher education and of its effects in terms of access, equity, quality of provision, student learning, research and scholarship and so on. And they balance the performance of markets in higher education against the alternative of more or a different kind of governmental intervention.
