Diminutives in English Klaus

P. Schneider,2012-10-24 That English has no diminutives is a common myth The present study shows however that English does possess diminutives and not only analytic but also synthetic diminutive markers Analytic markers include first and foremost little as well as other adjectives from the same word field whereas the inventory of synthetic markers comprises suffixes as for instance ie ette let kin een s er poo and pegs These markers are examined from a grammatical and a pragmatic perspective in an integrative formal functional framework The grammatical perspective involves phonological morphological and semantic features while the pragmatic perspective involves pragmalinguistic as well as sociopragmatic features on the levels of the speech act and larger interactive units in dialogue The findings reveal that English diminutive suffixes are in fact among the most productive suffixes of the English language While the suffixes share a number of features each has developed its own profile specifically regarding semantic and pragmatic features In everyday conversation there is a division of labour between the synthetic and the analytic type of formation concerning the communicative functions of diminutives and their distribution in discourse The choice of formal device and its function depend crucially on pragmatic factors notably on the illocution the interactive status the realisation strategy and the politeness value of the utterances in which diminutives

are employed and also on the relationship between the interlocutors

Text Variability Measures in Corpus Design for Setswana Lexicography Thapelo J.

Otlogetswe, 2011-01-18 This book is about the design of a Setswana corpus for lexicography While various corpora have been compiled and a variety of corpora based research has been attempted in African languages no effort has been made towards corpus design Additionally although extensive analysis of the Setswana language has been done by missionaries grammarians and linguists since the 1800s none of this research is in corpus design Most research has been largely on the grammatical study of the language The recent corpora research in African languages in general has been on the use of corpora for the compilation of dictionaries and little of it is in corpus design Pioneers of this kind of corpora research in African languages are Prinsloo and De Schryver 1999 De Schryver and Prinsloo 2000 and 2001 and Gouws and Prinsloo 2005 Because of a lack of research in corpora design particularly in African languages this book attempts to fill that gap especially for Setswana It is hoped that the finding of this study will inspire similar designs in other languages comparable to Setswana We explore corpus design by focusing on measuring a variety of text types for lexical richness at comparable token points The study explores the question of whether a corpus compiled for lexicography must comprise a variety of texts drawn from different text types or whether the quality of retrieved information for lexicographic purposes from a corpus comprising diverse text varieties could be equally extracted from a corpus with a single text type This study therefore determines whether linguistic variability is crucial in corpus design for lexicography
