Rpv Integrity And Fracture Mechanics:

RPV Integrity and Fracture Mechanics Dominique Moinereau, 2004 **Irradiation Embrittlement of Reactor Pressure Vessels (RPVs) in Nuclear Power Plants** Naoki Soneda, 2014-09-01

Reactor Pressure Vessels (RPVs) contain the fuel and therefore the reaction at the heart of nuclear power plants. They are a life determining structural component; if they suffer serious damage, the continued operation of the plant is in jeopardy. This book critically reviews irradiation embrittlement, the main degradation mechanism affecting RPV steels, and mitigation routes for managing the RPV lifetime. Part I reviews RPV design and fabrication in different countries with an emphasis on the materials required, their important properties, and manufacturing technologies. Part II then considers RVP embrittlement in operational nuclear power plants using different reactors. Chapters are devoted to embrittlement in light water reactors, including WWER type reactors and Magnox reactors. Finally, Part III presents techniques for studying embrittlement, including irradiation simulation techniques, microstructural characterisation techniques, and probabilistic fracture mechanics.

Irradiation Embrittlement of Reactor Pressure Vessels (RPVs) in Nuclear Power Plants provides a thorough review of an issue that is central to the safety of nuclear power generation. The book includes contributions from an international team of experts and will be a useful resource for nuclear plant operators and managers, relevant regulatory and safety bodies, nuclear metallurgists, and other academics in this field. Discusses reactor pressure vessel (RPV) design and the effect irradiation embrittlement can have, the main degradation mechanism affecting RPVs. Examines embrittlement processes in RPVs in different reactor types, as well as techniques for studying RPV embrittlement.

Fatigue and Fracture Mechanics Robert S. Piascik, 1997 *Federal Register*, 1995-12-15 **Understanding and Mitigating Ageing in Nuclear Power Plants** Philip G Tipping, 2010-10-26

Plant life management (PLiM) is a methodology focussed on the safety first management of nuclear power plants over their entire lifetime. It incorporates and builds upon the usual periodic safety reviews and licence renewals as part of an overall framework designed to assist plant operators and regulators in assessing the operating conditions of a nuclear power plant and establishing the technical and economic requirements for safe long term operation. Understanding and mitigating ageing in nuclear power plants critically reviews the fundamental ageing degradation mechanisms of materials used in nuclear power plant structures, systems, and components. SSC, along with their relevant analysis and mitigation paths, as well as reactor type specific PLiM practices. Obsolescence and other less obvious ageing related aspects in nuclear power plant operation are also examined in depth. Part one introduces the reader to the role of nuclear power in the global energy mix and the importance and relevance of plant life management for the safety, regulation, and economics of nuclear power plants. Key ageing degradation mechanisms and their effects in nuclear power plant systems, structures, and components are reviewed in part two, along with routes taken to characterise and analyse the ageing of materials and to mitigate or eliminate ageing degradation effects. Part three reviews analysis, monitoring, and modelling techniques applicable to the study of

nuclear power plant materials as well as the application of advanced systems structures and components in nuclear power plants Finally Part IV reviews the particular ageing degradation issues plant designs and application of plant life management PLiM practices in a range of commercial nuclear reactor types With its distinguished international team of contributors Understanding and mitigating ageing in nuclear power plants is a standard reference for all nuclear plant designers operators and nuclear safety and materials professionals and researchers Introduces the reader to the role of nuclear power in the global energy mix Reviews the fundamental ageing degradation mechanisms of materials used in nuclear power plant structures systems and components SSC Examines topics including elimination of ageing effects plant design and the application of plant life management PLiM practices in a range of commercial nuclear reactor types
