Sea Stars And Their Kin:

Sea Stars and Their Kin Herbert Spencer Zim, Lucretia Krantz, 1976-01-01 Introduces five kinds of starfish and describes their growth reproduction feeding habitats and relationship with human beings **Peterson First Guide to Urban Wildlife**, 1994 Presents the novice with information about the plants and animals from poison ivy and cockroaches to crabgrass and mountain lions that grow and live near humans *A Naturalist's Holiday by the Sea* Arthur de Carle Sowerby, 1923 *Beachcomber's Guide to Gulf Coast Marine Life* Susan B. Rothschild, Nick Fotheringham, 2004 This updated guide provides the latest findings about the biology and ecology of the Gulf of Mexico [The Biological Universe](#) Wallace Arthur, 2020-09-24 Current state of play in astrobiology including exoplanets and their atmospheres habitable zones and the likelihood of evolution elsewhere *New Mythologies in Design and Culture* Rebecca Houze, 2016-05-19 Taking as its point of departure Roland Barthes classic series of essays *Mythologies* Rebecca Houze presents an exploration of signs and symbols in the visual landscape of postmodernity In nine chapters Houze considers a range of contemporary phenomena from the history of sustainability to the meaning of sports and children's building toys Among the ubiquitous global trademarks she examines are BP McDonald's and Nike What do these icons say to us today What political and ideological messages are hidden beneath their surfaces Taking the idea of myth in its broadest sense the individual case studies employ a variety of analytic methods derived from linguistics psychoanalysis anthropology sociology and art history In their eclecticism of approach they demonstrate the interdisciplinarity of design history and design studies Just as Barthes' meditations on culture concentrated on his native France *New Mythologies* is rooted in the author's experience of living and teaching in the United States Houze's reflections encompass both contemporary American popular culture and the history of American industry with reference to such foundational figures as Thomas Jefferson and Walt Disney The collection provides a point of entry into today's complex postmodern or post postmodern world and suggests some ways of thinking about its meanings and the lessons we might learn from it **The Princeton Field Guide to Prehistoric Mammals** Donald R. Prothero, 2016-12-06 The ultimate illustrated guide to the lost world of prehistoric mammals After the mass extinction of the dinosaurs 65 million years ago mammals became the dominant terrestrial life form on our planet Roaming the earth were spectacular beasts such as saber toothed cats giant mastodons immense ground sloths and gigantic giraffe like rhinoceroses Here is the ultimate illustrated field guide to the lost world of these weird and wonderful prehistoric creatures A woolly mammoth probably won't come thundering through your vegetable garden any time soon But if one did this would be the book to keep on your windowsill next to the binoculars It covers all the main groups of fossil mammals discussing taxonomy and evolutionary history and providing concise accounts of the better known genera and species as well as an up to date family tree for each group No other book presents such a wealth of new information about these animals what they looked like how they behaved and how they were interrelated In addition this unique guide is stunningly illustrated throughout with

full color reconstructions of these beasts many never before depicted along with photographs of amazing fossils from around the world Provides an up to date guidebook to hundreds of extinct species from saber toothed cats to giant mammoths Features a wealth of color illustrations including new reconstructions of many animals never before depicted Demonstrates evolution in action such as how whales evolved from hooved mammals and how giraffes evolved from creatures with short necks Explains how mass extinctions and climate change affected mammals including why some mammals grew so huge

The Ancestor's Tale Richard Dawkins,2004 Renowned biologist and thinker Dawkins presents his most expansive work yet a comprehensive look at evolution ranging from the latest developments to his own provocative views and loosely based on the form of Chaucer's Canterbury Tales *Evolution's Witness* Ivan R. Schwab,Richard R. Dubielzig,Charles Schobert,2012-01-05 The evolution of the eye spans 3 75 billion years from single cell organisms with eyespots to Metazoa with superb camera style eyes At least ten different ocular models have evolved independently into myriad optical and physiological masterpieces The story of the eye reveals evolution's greatest triumph and sweetest gift This book describes its journey Provided by publisher **Parallel Worlds: Evolution Of Life Across The Cosmos** Wallace Arthur,2024-12-27 Humanity is fast approaching the point of being able to answer the age old question Are we alone in the cosmos The answer will almost certainly turn out to be no This is virtually guaranteed by two discoveries made in the last hundred years or so that the Milky Way is just one of countless galaxies and that the number of planets beyond our solar system exoplanets is vast But what is extraterrestrial life actually like What kinds of creatures roam the surfaces of alien planets or swim in their seas Are they typically in the genre of life as we know it or are they characterized by exotic forms and as yet undiscovered metabolism In *Parallel Worlds* Wallace Arthur argues that we should expect to find creatures that are similar in broad terms to those of Earth This can be anticipated because the environments of habitable planets have many parallel features so Darwinian natural selection should work in parallel ways producing broadly parallel trees of life This book takes the form of a step by step argument in favour of the hypothesis that there are multiple worlds inhabited by life forms that are broadly parallel to those of our home planet Like all good hypotheses it's testable The testing won't be easy and it isn't imminent but it will happen eventually providing humanity lasts for long enough Consciousness Demystified Todd E. Feinberg,Jon M. Mallatt,2018-09-25 Demystifying consciousness how subjective experience can be explained by natural brain and evolutionary processes Consciousness is often considered a mystery How can the seemingly immaterial experience of consciousness be explained by the material neurons of the brain There seems to be an unbridgeable gap between understanding the brain as an objectively observed biological organ and accounting for the subjective experiences that come from the brain and life processes In this book Todd Feinberg and Jon Mallatt attempt to demystify consciousness to naturalize it by explaining that the subjective experiencing aspects of consciousness are created by natural brain processes that evolved in natural ways Although subjective experience is unique in nature they argue it is not necessarily mysterious

We need not invoke the unknown or unknowable to explain its creation Feinberg and Mallatt flesh out their theory of neurobiological naturalism after John Searle's biological naturalism that recognizes the many features that brains share with other living things lists the neural features unique to conscious brains and explains the subjective-objective barrier naturally They investigate common neural features among the diverse groups of animals that have primary consciousness the type of consciousness that experiences both sensations received from the world and affects such as emotions They map the evolutionary development of consciousness and find an uninterrupted progression over time without inserting any mysterious forces or exotic physics Finally bridging the previously unbridgeable they show how subjective experience although different from objective observation can be naturally explained

The Story of Earth's Climate in 25 Discoveries Donald R. Prothero, 2024-03-12 Over 4.5 billion years Earth's climate has transformed tremendously Before our more temperate recent past the planet swung from one extreme to another from a greenhouse world of sweltering temperatures and high sea levels to a snowball earth in which glaciers reached the equator During this history we now know living things and the climate have always influenced and even shaped each other But the climate has never changed as rapidly or as drastically as it has since the Industrial Revolution In this lively and entertaining book Donald R. Prothero explores the astonishing connections between climate and life through the ages telling the remarkable stories of the scientists who made crucial discoveries Journeying through the intertwined evolution of climate and life he tackles questions such as Why do we have phytoplankton to thank for the air we breathe What kind of climate was necessary for the rise of the dinosaurs or the mammals their successors When and how have climatic changes caused mass extinctions Prothero concludes with the Ice Ages and the Holocene the role of climate in human history and the perils of anthropogenic climate change Understanding why the climate has changed in the past this timely book shows is essential to grasping the gravity of how radically human activity is altering the climate today

Evolution Donald R. Prothero, 2017-08-22 Donald R. Prothero's

Evolution is an entertaining and rigorous history of the transitional forms and series found in the fossil record. Its engaging narrative of scientific discovery and well grounded analysis has led to the book's widespread adoption in courses that teach the nature and value of fossil evidence for evolution. Evolution tackles systematics and cladistics, rock dating, neo Darwinism and macroevolution. It includes extensive coverage of the primordial soup, invertebrate transitions, the development of the backbone, the reign of the dinosaurs and the transformation from early hominid to modern human. The book also details the many alleged missing links in the fossil record, including some of the most recent discoveries that flesh out the fossil timeline and the evolutionary process. In this second edition, Prothero describes new transitional fossils from various periods, vividly depicting such bizarre creatures as the Odontochelys or the turtle on the half shell, fossil snakes with legs and the Frogamander, a new example of amphibian transition. Prothero's discussion of intelligent design arguments includes more historical examples and careful examination of the experiments and observations that are exploited by creationists seeking to undermine sound science education. With new perspectives, Prothero reframes creationism as a case study in denialism and pseudoscience rather than a field with its own intellectual dynamism. The first edition was hailed as an exemplary exploration of the fossil evidence for evolution and this second edition will be welcome in the libraries of scholars, teachers and general readers who stand up for sound science in this post truth era.
