**Encyclopedia of Civil War Shipwrecks** W. Craig Gaines,2008-04 On the evening of February 2 1864 Confederate Commander John Taylor Wood led 250 sailors in two launches and twelve boats to capture the USS Underwriter a side wheel steam gunboat anchored on the Neuse River near New Bern North Carolina During the ensuing fifteen minute battle nine Union crewmen lost their lives twenty were wounded and twenty six fell into enemy hands Six Confederates were captured

and several wounded as they stripped the vessel set it ablaze and blew it up while under fire from Union held Fort Anderson. The thrilling story of USS Underwriter is one of many involving the numerous shipwrecks that occupy the waters of Civil War history. Many years in the making, W. Craig Gaines's *Encyclopedia of Civil War Shipwrecks* is the definitive account of more than 2,000 of these American Civil War period sunken ships. From Alabama's USS Althea, a Union steam tug lost while removing a Confederate torpedo in the Blakely River to Wisconsin's Berlin City, a Union side-wheel steamer stranded in Oshkosh, Gaines provides detailed information about each vessel, including its final location, type, dimensions, tonnage, crew size, armament, origin, registry (Union, Confederate, United States, or other country), casualties, circumstances of loss, salvage operations, and the sources of his findings. Organized alphabetically by geographical location (state, country, or body of water), the book also includes a number of maps providing the approximate locations of many of the wrecks, ranging from the Americas to Europe, the Arctic Ocean, and the Indian Ocean. Also noted are more than forty shipwrecks whose locations are in question. Since the 1960s, the underwater access afforded by SCUBA gear has allowed divers, historians, treasure hunters, and archaeologists to discover and explore many of the American Civil War related shipwrecks. In a remarkable feat of historical detective work, Gaines scoured countless sources, from government and official records to sports, diver, and treasure hunting magazines, and cross-indexes his compilation by each vessel's various names and nicknames throughout its career. An essential reference work for Civil War scholars and buffs, archaeologists, divers, and aficionados of naval history, *Encyclopedia of Civil War Shipwrecks* revives and preserves for posterity the little-known stories of these intriguing historical artifacts.

The book presents short papers of participants of the 10th International Scientific Conference and School for Young Scientists. **Physical and Mathematical Modeling of Earth and Environment Processes**. The book includes theoretical and experimental studies of processes in the atmosphere, oceans, the lithosphere, and their interaction; environmental issues; problems of human impact on the environment; methods of geophysical research; Research of the dynamic of natural systems: geosphere, hydrosphere, atmosphere, and their interactions; the human contribution to naturally occurring processes; are among the most urgent and practically important scientific problems. Intensive development of research in these areas is due to several factors. The widespread introduction of computer technology has allowed beginning calculation of complex phenomena previously unavailable for analysis. Creation and improvement of a new generation of geophysical instruments; remote observing systems based on the ship, aircraft, and satellite allowed us to obtain a large amount of data to objectively reflect the picture of the processes. The articles included in these book reflect also an important role of the laboratory modeling in searching of processes in geo environments and testing of new developed physical and mathematical models. Development of measurement optic information and other

techniques provide new opportunities to perform controllable and reproducible laboratory data for generations of new ideas and concepts Systematic stream of high resolution laboratory data stimulates development of analytical and numerical models of the dynamical processes in three nature environments A special focus is given to the extraction of hydrocarbon resources including from unconventional sources An alternative to the use of hydrocarbons as a main source of energy on the Planet in the coming decades is unlikely to be found At the same time the resource base of hydrocarbons is quickly depleted in particularly large and accessible oil and gas fields The shale oil and gas Arctic hydrocarbon stocks gas hydrates coal bed methane oil and gas from deep horizons can become new sources **Alaska Maritime National Wildlife Refuge ,1988**
